The --------------semaphore provides mutual exclusion for accesses to the buffer pool and is initialized to the

value 1.

▶mutex (Page 118)

▶binary

▶couting

▶none of the given options

Question No: 5 (Marks: 1) - Please choose one

Binary semaphores are those that have only two values---------

▶0 and n

▶0 and 0

▶0 and 1 (Page 117)

▶None of the given options

Question No: 6 (Marks: 1) - Please choose one

Addresses generated relative to part of program, not to start of physical memory are

▶Virtual

▶Physical

▶Relocatable Click here for detail

▶Symbolic

Question No: 7 (Marks: 1) - Please choose one

Object files and libraries are combined by a ------------- program to produce the executable binary

▶Compiler

▶Linker

▶Text editor

▶Loader Click here for detail

Question No: 8 (Marks: 1) - Please choose one

Physical memory is broken down into fixed-sized blocks, called----------- and Logical memory is divided into blocks of the same size, called -----------

►Frames, pages (Page 165)

►Pages, Frames

►Frames, holes

►Holes, segments

Question No: 9 (Marks: 1) - Please choose one

A page table needed for keeping track of pages of the page table is called --------------

►2-level paging

►Page directory (Page 173)

►Page size

►Page table size

Question No: 10 (Marks: 1) - Please choose one

The address generated by the CPU, after any indexing or other addressing-mode arithmetic, is called a --------

address, and the address it gets translated to by the MMU is called a ---------address.

►Virtual, physical click here for detail

▶Hexadecimal, Binary,

▶Valid, invalid

▶Physical, Virtual

Question No: 11 (Marks: 1) - Please choose one

Each page is a power of -------- bytes long in paging scheme.

▶2

▶3

▶4 (Page 167)

▶5

Question No: 12 (Marks: 1) - Please choose one

_______ is a way to establish a connection between the file to be shared and the directory entries of the users

who want to have aces to this file.

▶Link (Page 231)

▶Directory

▶Common Group

▶Access Permission

Question No: 13 (Marks: 1) - Please choose one

When a _____link is created, a directory entry for the existing file is created

▶Soft

▶Hard (Page 227)

▶Soft or Hard

▶None of the given options

Question No: 14 (Marks: 1) - Please choose one

The ___________ method requires each file to occupy a set of contiguous blocks on the disk.

▶Contiguous Allocation (Page 236)

▶Linked Allocation

▶Indexed Allocation

▶None of the given options

Question No: 15 (Marks: 1) - Please choose one

Which part of the computer system helps in managing the file and memory management system?

▶Operating System (Page 5)

▶Device Drivers

▶Application Software

▶Hardware

Question No: 16 (Marks: 1) . - Please choose one

Which of the following is correct definition for wait operation?

▶wait(S) { (Page 111)

while(S<=0)

;// no op

S--;

}

▶wait(S) {

S++;

}

▶wait(S) {

while(S>=0)

;// no op

S--;

}

▶wait(S) {

S--;

}

Question No: 17 (Marks: 1) - Please choose one

Wrong use of wait and signal operations (in context with semaphores) can cause __________ problem(s).

▶Mutual Exclusion

▶Deadlock

▶Bounded Waiting

▶All of the given options are correct

Question No: 18 (Marks: 1) - Please choose one

If a system is not in a safe state, there can be no deadlocks.

►True

►False (Page 137)

Question No: 19 (Marks: 1) - Please choose one

If a process continues to fault, replacing pages, for which it then faults and brings back in right away. This high

paging activity is called ___________.

►paging

►thrashing (Page 210)

►page fault

►CPU utilization

Question No: 20 (Marks: 1) - Please choose one

In _____________ page replace algorithm we will replace the page that has not been used for the longest period of time.

▶counter based

▶Least Frequently Used

▶FIFO

▶LRU (Page 202)

Question No: 21 (Marks: 1) . - Please choose one

Overlays are implemented by the __________________

▶Operating system

▶Programmer (Page 159)

▶Kernel

▶Shell

Question No: 22 (Marks: 1) - Please choose one

An acyclic graph does not allow directories to have shared subdirectories and files.

▶True

▶False (Page 225)

Question No: 23 (Marks: 1) - Please choose one

The size of pages and frames are same in logical memory and physical memory respectively.

▶True (Page 165)

▶False

Question No: 24 (Marks: 1) - Please choose one

A modification of free-list approach in free space managment is to store the addresses of n free blocks in the

first free block. Known as ______.

▶counting

▶linked list

▶bit vector

▶grouping (Page 243)

Question No: 25 (Marks: 1) - Please choose one

In deadlock detection and recovery algorithm, a deadlock exists in the system if and only if the wait for graph contains a _____________

▶Cycle (Page 147)

▶Graph

▶Edge

▶Node

Question No: 26 (Marks: 1) - Please choose one

Intel is basically designed for following Operating Systems except __________.

▶MULTICS (Page 182)

▶OS/2

▶Windows

▶Linux

Question No: 27 (Marks: 1) - Please choose one

Following is NOT true about Virtual memory.

▶Virtual memory help in executing bigger programs even greater in size that of main memory.

▶Virtual memory makes the processes to stuck when the collective size of all the processes becomes

greater than the size of main memory.

▶Virtual memory also allows files and memory to be shared by several different processes through page

sharing.

▶Virtual memory makes the task of programming easier because the programmer need not worry about

the amount of physical memory,

Question No: 28 (Marks: 1) - Please choose one

The execution of critical sections must NOT be mutually exclusive

▶True

▶False (Page 100)

Question No: 29 (Marks: 1) - Please choose one

The critical section problem can be solved by the following except

▶Software based solution

▶Firmware based solution (Page 101)

▶Operating system based solution

▶Hardware based solution

Question No: 4 (Marks: 1) - Please choose one

With ----------you use condition variables.

▶Semaphores

▶Read/Write Locks

▶Swaps

▶Monitor (Page 126)

Question No: 5 (Marks: 1) - Please choose one

Deadlocks can be described more precisely in terms of a directed graph called a system ----------

▶Directed graph

▶Critical path

▶Resource allocation graph Click here for detail

▶Mixed graph

Question No: 6 (Marks: 1) - Please choose one

The integer value of _________ semaphores can not be greater than 1.

▶Counting

▶Binary (Page 117)

▶Mutex

▶Bounded buffer

Question No: 7 (Marks: 1) - Please choose one

Starvation is infinite blocking caused due to unavailability of resources.

▶True (Page 115)

▶False

Question No: 8 (Marks: 1) - Please choose one

The set of all physical addresses corresponding to the logical addresses is a ---------------- of the process

▶Physical address space (Page 155)

▶Process address space

▶None of the given options

▶Logical address space

Question No: 9 (Marks: 1) - Please choose one

---------------- indicates size of the page table

▶translation look-aside buffers

▶Page-table length register (PTLR) (Page 169)

▶Page-table base register (PTBR)

▶Page offset

Question No: 10 (Marks: 1) - Please choose one

If validation bit is 0, it indicates a/an --------- state of segment.

▶protected

▶shared

▶legal

▶illegal (Page 180)

Question No: 11 (Marks: 1) - Please choose one

In _______ allocation scheme free frames are equally divided among processes

▶Fixed Allocation (Page 207)

▶Propotional Allocation

▶Priority Allocation

▶None of the given options

Question No: 12 (Marks: 1) - Please choose one

Progress and Bounded Waiting are some of the characteristics to solve the critical section problems.

▶True (Page 101)

▶False

Question No: 13 (Marks: 1) - Please choose one

________ is used to store data on secondary storage device, e.g., a source program(in C), an executable

program.

▶Block Special File

▶Link File

▶Ordinary File (Page 220)

▶Directory

Question No: 18 (Marks: 1) - Please choose one

The process of holding at least one resource and waiting to acquire additional resources that are currently being

held by other processes is known as_______.

▶Mutual exclusion

▶Hold and wait (Page 131)

▶No preemption

▶Circular wait

Question No: 19 (Marks: 1) - Please choose one

The condition where a set of blocked processes each holding a resource and waiting to acquire a resource held

by another process in the set, is termed as ________.

▶Deadlock (Page 130)

▶Starvation

Question No: 20 (Marks: 1) - Please choose one

Banker‟s algorithm is used for ________________

▶Deadlock avoidance (Page 140)

▶Deadlock detection

▶Deadlock prevention

▶Deadlock removal

Question No: 21 (Marks: 1) - Please choose one

A program can not execute unless whole or necessary part of it resides in the main memory.

▶True

▶False

Question No: 22 (Marks: 1) - Please choose one

The ________ requires that once a writer is ready, that writer performs its write as soon as possible , if a writer

waiting to access the object, no new readers may start reading.

▶first readers-writers problem

▶second readers-writers problem (Page 119)

▶third readers-writers problem

▶fourth readers-writers problem

Question No: 23 (Marks: 1) - Please choose one

Which command, Display permissions and some other attributes for prog1.c in your current directory?

▶ls –l prog1.c (Page 234)

▶ls –d prog1.c

▶ls file prog1.c

▶ls –l prog1.c /Directory

Question No: 24 (Marks: 1) - Please choose one

In the C-Scan and C-Look algorithms, when the disk head reverses its direction, it moves all the way to the

other end, without serving any requests, and then reverses again and starts serving requests.

▶True (Page 249)

▶False

Question No: 25 (Marks: 1) - Please choose one

In paged segmentation, we divide every segment in a process into ___________pages.

▶Fixed size (Page 182)

▶Variable size

Question No: 26 (Marks: 1) - Please choose one

Intel 80386 used paged segmentation with __________ level paging.

▶One

▶Two (Page 185)

▶Three

▶Four

Question No: 27 (Marks: 1) - Please choose one

The logical address of Intel 80386 is __________

▶36 bits

▶48 bits (Page 185)

▶64 bits

▶128 bits

Question No: 28 (Marks: 1) - Please choose one

The Swap instruction which is the hardware solution to synchronization problem does not satisfy the

____

condition, hence not considered to be a good solution.

▶Progress

▶Bounded waiting (Page 109)

▶Mutual exclusion

▶None of the given

Question No: 29 (Marks: 1) - Please choose one

The -----------scheme is not applicable to a resource allocation system with multiple instances of each resource

type.

▶Wait for graph (Page 148)

▶Resource allocation graph

▶Both Resource-allocation and wait-for graph

►None of the given options

Question No: 30 (Marks: 1) - Please choose one

The following requirement for solving critical section problem is known as______________.

“There exists a bound on the number of times that other processes are allowed to enter their critical

sections after a process has made a request to enter its critical section and before that request is

granted.”

►Progress

►Bounded Waiting (Page 101)

►Mutual Exclusion

►Critical Region

Question No: 1 of 10 (Marks: 1) - Please choose one

Consider a scenario in which one process P1 enters in its critical section, no other process is allowed to execute

in its critical section. This is called ---------------

Mutual exclusion Click here for detail

Context switching

Multithreading

Progress

Question No: 1 of 10 (Marks: 1) - Please choose one

Following is not the classical problem of synchronization.

Bounded buffer problem

Reader writer problem

Dining philosophers problem

Counting Semaphore problem (Page 118)

Question No: 1 of 10 (Marks: 1) - Please choose one

Typically monitor, a high level synchronization tool is characterized by ___________ and _______________.

Global variable,local variable

Signal, wait

Local data, programmer defined operators (Page 125)

Local variables, semaphores

Question No: 1 of 10 (Marks: 1) - Please choose one

The section of code after the critical section is called __________.

Crystal section

Entry section

Remainder section

Exit section

Question No: 1 of 10 (Marks: 1) - Please choose one

A process is said to be in critical section if it executes code that manipulates shared data.

True (Page 100)

False

Question No: 1 of 10 (Marks: 1) - Please choose one

In producer-Consumer problem synchronization is required. On which shared area this synchronization actually

affect?

Counter

Buffer

Entry section

Exit section

Question No: 1 of 10 (Marks: 1) - Please choose one

Critical section problem can be solved by using how many ways?

4

3 (Page 101)

1

2

Question No: 1 of 10 (Marks: 1) - Please choose one

_________________ is an integer variable accessible through wait and signal which are atomic operations.

Semaphore (Page 111)

Mutex

Busy waiting

Signal

Question No: 1 of 10 (Marks: 1) - Please choose one

Software solution to critical section problem can run only in environment _______________.

Multiprocessor

Multithreading

Uniprocessor

Separate address spacing

Question No: 10 of 10 (Marks: 1) - Please choose one

___________ integer shows the highest priority of a process in CPU scheduling

► Small (Page 86)

► Large

Question No: 1 of 10 (Marks: 1) - Please choose one

Removing the possibility of deadlock in dining philosopher problem does not ensure the ______________

problem will not occur.

Mutual Exclusion

Starvation (Page 123)

Critical Section

Bounded Buffer

Question No: 1 of 10 (Marks: 1) - Please choose one

The priority of a process can be changed using ____________ command.

► nice (Page 94)

▶cmd

▶Cat

▶grep

Question No: 1 of 10 (Marks: 1) - Please choose one

The integer value of ________semaphores can range over an unrestricted integer domain.

▶Counting (Page 117)

? ▶Binary

? ▶Mutex

? ▶Bounded buffer

Question No: 1 of 10 (Marks: 1) - Please choose one

______________ is a preemptive scheduling algorithm.

▶First Come First Serve

▶Shortest Job First

▶Round Robin (Page 89)

▶None of these

Question No: 1 of 10 (Marks: 1) - Please choose one

______________ algorithm is used for solving n-process critical section problem.

▶Bankers

▶Bakery (Page 105)

▶Babbles

▶None of the given

Question No: 5 of 10(Marks: 1) - Please choose one

Batch programs are usually __________ programs.

▶Interactive

▶Non-interactive click here for detail

▶Foreground

▶Preemptive

Question No: 1 of 10(Marks: 1) - Please choose one

Using hardware solution to synchronization for complex problems, introduce a new synchronization tool know

as ________________.

TestAndSet

Semaphore (Page 111)

Swap

Trap

Question No: 1 of 10 (Marks: 1) - Please choose one

Use of semaphore create a problem of busy waiting, this wastes CPU cycles that some other process may be

able to use productively. This type of semaphore is also called _______________

Semaphore S

Spinlock (Page 112)

Locking Semaphore

Mutex

Question No: 1 of 10 (Marks: 1) - Please choose one

------------- is a segment of code that accesses a shared resource like data structure or device that must not be

concurrently accessed by more than one thread of execution.

Multithreading

Context switching

Critical section (Page 105)

Pipelining

Question 1 of 10 (Marks: 1) - Please choose one

Cache is non-volatile memory.

▶True

▶False (Page 153)

While executing the statement c++/c-- in Producer-Consumer problem, at back end certain number of

instructions are executed, if interleaving of statements happen, it create race condition. Tell number of

instructions that require "no interleaving" while executing c++/c--?

3

1

2

0

Question 1 of 10 (Marks: 1) - Please choose one

The collection of process that is waiting on the disk to be brought into the memory for execution forms the

____

▶Input queue (Page 154)

▶Output queue

▶Both of the

▶None of the above

Question 1 of 10 (Marks: 1) - Please choose one

_____is used due to un-used space in fixed size blocks/ pages.

▶Internal fragmentation Click here for detail

▶External fragmentation

▶Paging

▶MVT

Question 1 of 10 (Marks: 1) - Please choose one

Fragmentation when using ICMP for path MTU should be avoided.

▶True

▶False

Question 1 of 10 (Marks: 1) - Please choose one

Variable name are _____ address.

▶Physical

▶Reloadable

▶Relative

▶Symbolic Click here for detail

Question 1 of 10 (Marks: 1) - Please choose one

Secondary storage memory devices have ____ memory.

▶Volatile

▶Permanent and non volatile Click here for detail

▶Temporary

▶None of the

Question 1 of 10 (Marks: 1) - Please choose one

_____is caused due to un-used in physical memory.

▶Internal fragmentation Click here for detail

▶External fragmentation

▶Paging

▶MVT

Question 1 of 10 (Marks: 1) - Please choose one

The run-time mapping from virtual to physical address is done by a piece of hardware in the CPU, called the

____

▶Memory management unit (MMU) (Page 155)

▶CPU scheduler

▶Registers

▶None of the above

Question 1 of 10 (Marks: 1) - Please choose one

Main memory is _______ memory.

▶Volatile memory Click here for detail

▶Non-volatile

▶Permanent

▶Virtual

Question 1 of 10 (Marks: 1) - Please choose one

What do we name to an address that is generated by CPU?

▶Logical address (Page 152)

▶Physical address

▶Binary address

▶None of the above

Question 1 of 10 (Marks: 1) - Please choose one

Address Binding will be at _____ in multiprogramming with fixed tasks (MFT)

▶Rub time

▶Load time (Page 160)

▶Dynamic time

▶None of the

Question 1 of 10 (Marks: 1) - Please choose one

In ____ technique, memory is divided into several fixed-size partitions.

▶Swapping

▶Overlays

▶Multiprogramming with fixed tasks (MFT) (Page 159)

▶Multiprogramming with fixed tasks (MFT)

Question 1 of 10 (Marks: 1) - Please choose one

_____is used in the detection and recovery mechanism to handle deadlocks.

▶Wait-for graph (Page 144)

▶Resource allocation graph

▶Circular graph

▶Claim edge graph

Question 1 of 10 (Marks: 1) - Please choose one

An optimal page-replacement algorithm has the lowest page fault rate of all algorithms.

▶True (Page 199)

▶False

Question 1 of 10 (Marks: 1) - Please choose one

_________ Point to the page table.

▶Translation look-aside buffers

▶Page offset

▶Page-table length registers (PRLR)

▶Page-table base registers (PTBR) (Page 166)

Question 1 of 10 (Marks: 1) - Please choose one

The segment table maps the ______________ the physical addresses.

▶Page addresses

▶Shared page addresses

▶One-dimensional logical addresses

▶Two-dimensional logical addresses (Page 175)

Question 1 of 10 (Marks: 1) - Please choose one

Segmentation is a memory management scheme that support________?

▶Programmer’s view of memory (Page 175)

▶System‟s view of memory

▶Hardware‟s view of memory

▶None of the given

Question 1 of 10 (Marks: 1) - Please choose one

The pager is used in connection with _____________.

▶Demand paging (Page 186)

▶Paging

▶Segmentation

▶Page segmentation

Question 1 of 10 (Marks: 1) - Please choose one

When the process tries to access locations that are not in memory, the hard traps the operating system. This is

called as_______.

▶Page fault (Page 188)

▶Page replacement

▶Paging

▶Segmentation

Question 1 of 10 (Marks: 1) - Please choose one

The main criteria of page replacement in optimal page replacement algorithm is to____________

▶Replacement that page will not be use for the longest period of time (Page 199)

▶Replacement that page will be required most frequently in the execution of process

▶Replace the page which is biggest in size.

Question 1 of 10 (Marks: 1) - Please choose one

--------------refers to the situation when free memory space exists to load a process in the memory but the space is not contiguous.

▶Segmentation

▶Internal fragmentation

▶Swapping

▶External Fragmentation (Page 165)

Question 1 of 10 (Marks: 1) - Please choose one

____________ algorithm is used in Deadlock avoidance.

▶Bakery

▶Banker's (Page 139)

▶Mutual exclusion

▶Safe Sequence

Question 1 of 10 (Marks: 1) - Please choose one

---------------keep in memory only those instructions and data that are needed at any given time.

▶Fragmentation

▶Paging

▶Swapping

▶Overlays (Page 156)

Question 1 of 10 (Marks: 1) - Please choose one

In_______, the library files are linked at load time.

▶Static linking Click here for detail

▶Dynamic linking

Question 1 of 10 (Marks: 1) - Please choose one

In swapping technique of Memory Management, the total amount transfer is directly proportional to the ______

▶amount of the memory swapped Click here for detail

▶amount of space on backing store

▶space on main memory

▶all the given options are correct

Question 1 of 10 (Marks: 1) - Please choose one

When the address used in a program gets converted to an actual physical RAM address, it is called --

----

▶Execution

▶Loading

▶Address Binding Click here for detail

▶Compiling

Question 1 of 10 (Marks: 1) - Please choose one

If the system can allocate resources to each process in some order and still avoid a deadlock then it is

said to be in _________ state.

▶Safe (Page 137)

▶Un-Safe

▶Mutual

▶Starvation

Question 1 of 10 (Marks: 1) - Please choose one

---------- register contains the size of the process

▶Base register

▶Index register

▶Limit register (Page 13)

▶Stack pointers register

Question 1 of 10 (Marks: 1) - Please choose one

In Resource Allocation Graph, a _________Pi --->Rj indicates that process Pi may request resource Rj

at some time in the future.

▶Claim edge (Page 138)

▶Request edge

▶Assignment edge

▶Allocation edge

Question 1 of 10 (Marks: 1) - Please choose one

What do we name to an address that is loaded into the memory-address register of the memory?

▶Logical address

▶Physical address (Page 155)

▶Binary addresses

▶None of the given options

Question 1 of 10 (Marks: 1) - Please choose one

The ----- is a single program that produces an object file

▶Linker

▶Compiler Click here for detail

▶Loader

▶Text editor

Question No: 1 of 10 (Marks: 1) - Please choose one

Preventing a condition of ________ to happen, deadlocks can be prevented to happen.

▯ ▶Critical region

▯ ▶Circular wait (Page 136)

▯ ▶Monitors

▯ ▶Critical section

Question No: 1 of 10 (Marks: 1) - Please choose one

A condition where a set of blocked processes each holding a resource and waiting to acquire a resource held by

another process in the set is termed as ________.

▶Deadlock (Page 130)

▯ ▶Starvation

Question No: 1 of 10 (Marks: 1) - Please choose one

The following is NOT a classical problem of synchronization

 ►Bounded buffer problem

 ►Reader writer problem

 ►Dining philosopher‟s problem

►Counting semaphore problem (Page 118)

Question 1 of 10 (Marks: 1) - Please choose one

The condition in which a set {P0, P1… Pn} of waiting processes must exist such that P0 is waiting for a resource that is held by P1, P1 is waiting for a resource that is held by P2, and so on, Pn-1 is waiting for a resource held by Pn, and Pn is waiting for a resource held by P0. This condition is known as _______________.

 ►Mutual exclusion

 ►Hold and wait

 ►No preemption

►Circular wait (Page 131)

Question No: 9 (Marks: 1) - Please choose one

A semaphore that cause Busy-Waiting is termed as ____________.

▶Spinlock (Page 113)

▶Monitor

▶Critical region

▶Critical section

Question No: 5 of 10 (Marks: 1) - Please choose one

The -----------scheme is not applicable to a resource allocation system with multiple instances of each resource type.

▶Wait for graph (Page 148)

▶Resource allocation graph

▶Both Resource-allocation and wait-for graph

▶None of the given options

Question No: 2 of 10 (Marks: 1) - Please choose one

The ________ requires that once a writer is ready, that writer performs its write as soon as possible , if a writer waiting to

access the object, no new readers may start reading.

▶first readers-writers problem

▶second readers-writers problem (Page 119)

▶ third readers-writers problem

▶ fourth readers-writers problem

Question No: 5 of 10 (Marks: 1) - Please choose one

Starvation is infinite blocking caused due to unavailability of resources.

▶ True (Page 115)

▶ False

Question 1 of 10 (Marks: 1) - Please choose one

In pages segmentation, the logical address is legal if d is __________segment length.

▶ < (less then) (Page 180)

▶ >(greater than)

▶ =(equal to)

Question 1 of 10 (Marks: 1) - Please choose one

In ______ allocation scheme number of frames allocated to a process is proportional to its size .

▶ Proportional Allocation (Page 207)

▶ Fixed allocation

▶ Priority allocation

▶None of these

No: 1 of 10 (Marks: 1) - Please choose one

In Resource Allocation Graph, A _______ Pi →Rj indicates that process Pi may request resource Rj at some

time in the future.

▶Claim edge (Page 138)

▶Request edge

▶Assignment edge

▶Allocation edge

Question No: 14 (Marks: 1) - Please choose one

A_______ is an integer variable that, apart from initialization is accessible only through two standard atomic

operations: wait and signal.

▶Semaphore (Page 111)

▶Monitor

▶Critical region

▶Critical section

Question 1 of 10 (Marks: 1) - Please choose one

In case of thrashing if CPU utilization is too low the operating system ______ the degree of multiprogramming.

▶Increases (Page 207)

▶Decrease

Question 1 of 10 (Marks: 1) - Please choose one

We want a page replacement algorithm with the ______________ page-fault rate.

▶Lowest (Page 198)

▶Highest

Question 1 of 10 (Marks: 1) - Please choose one

In a UNIX system,___________ system call can be used to request the operating system to memory map an

opened file.

▶mmap() (Page 195)

Question 1 of 10 (Marks: 1) - Please choose one

The high paging activity is called _______

▶Thrashing (Page 207)

Question 1 of 10 (Marks: 1) - Please choose one

The main memory is usually divided into two partitions, one for __________ and other for __________ .

► resident operating System, User processes (Page 158)

Question No: 1 of 10 (Marks: 1) - Please choose one

A section of code or collection of operations in which only one process may be executing at a given time, is

called critical section. Consider a system containing n processes {P0, P1, 2, ..., Pn }. Each process has a

segment of code called a ____

► N-Process Critical Section Problem Click here for detail

Question No: 1 of 10 (Marks: 1) - Please choose one

Semaphore S is a/an _________ type of variable to use as synchronization tool.

► Integer (Page 111)

Question No: 1 of 10 (Marks: 1) - Please choose one

In order to remove the problem like busy waiting, some high level synchronization constructs are defined. What

are they?

► Critical regions and Monitors (Page 124)

Question No: 1 of 10 (Marks: 1) - Please choose one

In instruction TestAndSet mutual exclusion implementation is done by declaring a Boolean variable lock

_______________.

►Initialized as false (Page 109)

Question No: 1 of 10 (Marks: 1) - Please choose one

We can use semaphores to deal with the number of ___________process critical section problem.

►n-process critical section problem

Question No: 5 (Marks: 1) - Please choose one

A solution to the critical section problem must satisfy the following requirements

►Progress

►Mutual exclusion

►Bounded Waiting

►All of these (Page 101)

Question No: 60 (Marks: 1) - Please choose one

n-process critical section problem can be solved by using

►The bakery algorithm (Page 105)
