Options:

- Social Research

- Historical Comparative Research

- Action Research

- Experimental Research

Correct option: Historical Comparative Research

3. In experimental research, a specific event in the external environment occurring between the first and second measurement that is beyond the control of the experimenter and that affects the validity of an experiment, is termed as:

Options:

- Testing Effect

- History Effect

- Maturation Effect

- Instrumentation Effect

Correct option: History Effect

4. Which of the following is the most damaging problem for the researcher with secondary data?

Options:

- It may not address the aims

- It may not be accurate

- It may only provide part of the answer

- It may be biased

Correct option: It may not be accurate

5. Which of the following elements are NOT included in Observation in Non-Reactive research?

Options:

- Time Duration

- External Appearance

- Count Behaviors

Correct option: Time Duration

6. When you are confident that the experimental manipulation produced the changes you measured in the dependent variable, your study probably has good _____ validity.

Options:

- Construct

- Internal

- Causal

- External

Correct option: Internal validity

7. Which of the following links with an abstract model of underlying relations or causal mechanism?

Options:

- Experimental research

- Historical comparative research

- Social research

- Action research

Correct option: Social research

Options:

- Statistical Regression

- Maturation Effect

- Testing Effect

- Instrumentation Effect

Correct option: Instrumentation Effect

10. Which of the following is true?

Options:

- A study is internally valid but may not be externally valid.

- A study must be both internally and externally valid.

- The internal and external validity of studies are not related in any way.

Correct option: A study is internally valid but may not be externally valid.
