Q.1 In_____ sampling techniques, the researcher asks the participants to identify other potential research participants.

A. Convenience

B. Quota

C. Purposive

D. Snowball

Q.2 Non probability sampling is used when which of the following condition fulfills?

A. Researcher needs to reduce sampling bias

B. Researcher thinks that every element should be given equal chance of selection

C. Researcher is least concerned about the generalizability of results

D. Results should accurately represent total population

Q.3 Pilot testing can be beneficial in:

A. Structuring open ended questions

B. Collecting sample

C. Analysis of data

D. Determining population

Q.4 Which of the following is NOT a longitudinal study?

A. Time series

B. Panel study

C. Cohort study

D. Cross sectional study

Q.5 _____ is that unit about which information is collected and which provides the basis of analysis.

A. Population

B. Sampling frame

C. Element

D. Sampling unit

Q.6 How is nominal data presented?

A. In order

B. Data where there is a true zero

C. Units of equal distance

D. In discrete categories

Q.7 A researcher has taken random sample from the population divided on the basis of level of education, age and salary package. Which of the following sampling design he is using?

A. Cluster sampling

B. Systematic sampling

C. Stratified random sampling

D. Simple random sample

Q.8 Which of the following is one of the components of research design?

A. Title

B. Time dimension

C. References

D. Bibliography

Q.9 In random sampling, the probability of selecting an item from the population is

A. Unknown

B. Undecided

C. Known

D. Zero

Q.10 Which of the following best defines the population of study?

A. The subject on which the measurement is being taken

B. None of the given option

C. The total collection of elements about which we wish to make some inferences

D. Some selected elements from a population through which we can draw conclusions about all population

---

Q.1 A researcher wants to study the impact of average hour of study in a week on CGPA of MBA students in virtual university of Pakistan. He focused on specifically the students specialized in finance. The total of number of MBA (finance) students in VU is an example of which of the following?

A. Population

B. Element

C. Sample

D. Target population

Q.2 "Willingness of the respondents to co-operate" is a part of _____ aspect which needs to be evaluated during pilot testing.

A. Reactions of Respondents

B. Staffing and activities of research team can be checked

C. Sampling procedure can be checked

D. Discovering errors in the instrument

Q.3 Sample is subset of

A. Distribution

B. Data

C. Group

D. Population

Q.4 Methodological rigor increases as one moves from:

A. Exploratory study to explanatory study

B. Quantitative to qualitative study

C. Explanatory study to exploratory study

D. None of the given options

Q.5 You wish to make a precise estimate about the characteristics of a population of individuals. You should use:

A. Accidental sampling

B. Probability sampling

C. Quota sampling

D. Snowball sampling

Q.6 _____ is a measure in which the researcher captures the direction of a variable construct.

A. Index

B. Combining

C. Collapsing

D. Scale

Q.7 Asking neutral questions is a part of:

A. Probing tactics

B. In house training

C. Recording the responses

D. Verbal communication

Q.8 A numerical value calculated from population is called

A. Sampling Error

B. Error

C. Bias

D. Parameter

Q.9 Which of the following is not a data collection method?

A. Secondary data

B. Correlational method

C. Questionnaires

D. Focus groups

Q.10 Number of questionnaires returned, divided by the total number of eligible people who were contacted in a survey refers to:

A. Return rate

B. Response rate

C. Item response rate

D. Non-response rate

Q.1 Studies conducted to establish cause-and-effect relationship using the same natural environment are called:

A. None of the given options

B. Field experiments

C. Interviews

D. Surveys

Q.2 Which of the following media involves interaction among individuals?

A. Print media

B. Human interactive media

C. Electronic media

D. Mass media

Q.3 Which of the following is an advantage of attaching a cover letter with a questionnaire?

A. It motivates the respondents to respond

B. It makes the research findings authentic

C. It makes easier to locate respondents

D. It helps researcher to do study easily

Q.4 If the research questions are concerned with finding out who, what, where, when, or how much, then the study is _____.

A. Exploratory study.

B. Qualitative study.

C. An explanatory study.

D. Descriptive study.

Q.5 Which one of the following in NOT a major method of data collection:

A. Interviews

B. Questionnaires

C. All of the given are the methods of data collection

D. Focus groups

Q.6 An expectant pause is a part of:

A. Recording the responses

B. In house training

C. Probing tactics

D. Verbal communication

Q.7 Which of the following techniques yields a simple random sample?

A. Randomly selecting schools, and then sampling everyone within the school.

B. Listing the individuals by ethnic group and choosing a proportion from within each ethnic group at random.

C. Numbering all the elements of a sampling frame and then using a random number table to pick cases from the table.

D. Choosing volunteers from an introductory psychology class to participate

---

Q.8 Self-administered questionnaires in hard form are a part of _____.

A. Non interactive media

B. Human interactive media

C. All of the given options

D. Electronic interactive media

Q.9 Which of the following is not a data collection method?

A. Secondary data

B. Questionnaires

C. Focus groups

D. Correlational method

Q.10 A collection of related records is called _____.

A. File

B. Knowledge

C. Data

D. Information

Q.1 In data collection process, when a researcher has to conduct an in depth interview, which of the following tool is necessary?

A. Interview Guide

B. Interview schedule

C. Questionnaire

D. Observation

Q.2 Which of the following is NOT a form of non-probability sampling?

A. Purposive sampling

B. Stratified sampling

C. Snowball sampling

D. Quota sampling

Q.3 Which of the following is the least obtrusive and most accurate method for recording data in an interview?

A. Note taking

B. Videotaping

C. Audiotaping

D. Writing notes after the interview

Q.4 _____ determine the unit of analysis.

A. Organizations

B. Population

C. Individuals

D. Research questions

Q.5 If the research questions are concerned with finding out who, what, where, when, or how much, then the study is _____.

A. Qualitative study.

B. Descriptive study.

C. Exploratory study.

D. An explanatory study.

Q.6 Non probability sampling is used when which of the following condition fulfills?

A. Researcher thinks that every element should be given equal chance of selection

B. Results should accurately represent total population

C. Researcher needs to reduce sampling bias

D. Researcher is least concerned about the generalizability of results

---

Q.7 Causal research answers which of the following types of question:

A. Where

B. Why

C. What

D. Who

Q.8 The logic of purposive sampling is:

A. To use participants because the researcher has access to them.

B. To include all participants, even though they are not all relevant to the problem.

C. That a few information-rich participants studied in depth yield many insights about a topic.

D. That a random sample can generalize to a population.

Q.9 A researcher wants to study the impact of average hour of study in a week on CGPA of MBA students in virtual university of Pakistan. He focused on specifically the students specialized in finance. The total of number of MBA (finance) students in VU is an example of which of the following?

A. Population

B. Sample

C. Element

D. Target population

Q.10 All of the following are advantages of personal interviewing EXCEPT:

A. Scarcity of feedback

B. Probing Complex Questions

C. Props and Visual Aids

D. Observation of the Non-Verbal Behavior

Q.1 Personal interviews conducted in shopping malls are referred to as _____.

A. None of the given options
B. Self-administered interviews
C. Door to door interviews
D. Mall intercept interviews

Q.2 _____ encourages respondents to enlarge on, clarify and explain answers.

A. Probing
B. Feedback
C. Callbacks
D. Financial incentives

Q.3 A sample can be defined as:

A. The subject on which the measurement is being taken
B. The count of all elements in a population
C. The total collection of elements about which we wish to make some inferences
D. Some selected elements from a population through which we can draw conclusions about all population

---

Q.4 A process of changing data from their original form to a format that is more suitable to perform a data analysis is called as_____

A. Data transformation
B. Information transformation
C. Data creation
D. Information creation

Q.5 "Have you ever had or been treated for skin allergy?

Yes A. Loaded question
No" B. Leading question
C. Double barreled question
Which type of question it is? D. Ambiguous question

Q.6 "Is the logistical support adequate?" is a part of _____ aspect which needs to be evaluated during pilot testing

A. Discovering errors in the instrument
B. Reactions of Respondents
C. Sampling procedure can be checked
D. Staffing and activities of research team can be checked

Q.7 Call backs are used as a major means to reduce_____

A. Response rate

B. Response bias

C. Negative responses

D. Non-response error

Q.8 Face to face interviews are a part of _____.

A. Non interactive media

B. All of the given options

C. Human interactive media

D. Electronic interactive media

Q.9 Which of the following is not something a researcher will have to consider when thinking about their sample size?

A. Heterogeneity of population.

B. Time and cost.

C. Length of questionnaire.

D. Homogeneity of population.

Q.10 Which of the following is an advantage of open questions?

A. They prevent respondents from giving unusual answers.

B. They allow respondents to put less effort into their answer.

C. They allow respondents to answer in their own terms.

D. They allow respondents to code their answers in advance.

Q.1 Which of the following is a measure in which the researcher captures the intensity, direction, level, or potency of a variable construct?

A. Scale

B. Weighting

C. Unidimensionality

D. Index

Q.2 An expectant pause is a part of:

A. Verbal communication

B. Probing tactics

C. Recording the responses

D. In house training

Q.3 All of the following are the monetary ways to increase response rate EXCEPT:

A. Pens

B. Lottery tickets

C. Cover letter

D. Variety of premiums

Q.4 Which of the following is an example of an issue that would be checked in a pilot testing?

A. Logical answers between questions (i.e., attributes should be rated high if purchase interest is high)

B. Single responses to all multiple choice questions

C. Completion of all questions on a questionnaire

D. Legible writing

Q.5 _____ is that unit about which information is collected and which provides the basis of analysis.

A. Element

B. Sampling frame

C. Sampling unit

D. Population

Q.6 Which of the following is NOT a form of non-probability sampling?

A. Stratified sampling

B. Quota sampling

C. Snowball sampling

D. Purposive sampling

Q.7 In_____study, relationship among variables is explained.

A. Explanatory

B. Descriptive

C. Exploratory

D. Qualitative

Q.8 A numerical value calculated from population is called

A. Parameter

B. Error

C. Sampling Error

D. Bias

Q.9 Which of the following is an advantage of open questions?

A. They prevent respondents from giving unusual answers.

B. They allow respondents to code their answers in advance.

C. They allow respondents to answer in their own terms.

D. They allow respondents to put less effort into their answer.

Q.10 Which of the following is a research method that allows a researcher to get information about a large number of subjects relatively inexpensively and easily?

A. Personal Interviewing

B. Laboratory observation

C. Survey

D. Case study

Q.1 Which of the following term refers to a statistical method that can be used to statistically equate groups on a pretest or some other variable?

A. Analysis of covariance

B. Matching

C. Experimental control

D. Differential influence

Q.2 Testing is most likely to negatively affect internal validity when_____.

A. The time between pre- and posttest is short

B. The instrument is unreliable

C. The participants are very low scorers

D. The information tested is attitudinal in nature

Q.3 The posttest-only design with nonequivalent groups is likely to control for which of the following threats to internal validity:

A. History

B. Differential attrition

C. Differential selection

D. Additive and interactive effects

Q.4 Which of the following describes the situation in which the control variable intervenes between the original independent variable and the dependent variables?

A. Interpretation pattern

B. Negative linear relationship

C. Replication pattern

D. Suppressor variable pattern

Q.5 Which of the following is true?

A. The internal and external validity of studies are not related in any way

B. A study is internally valid but may not be externally valid

C. A study must be both internally and externally valid

D. None of the given options

Q.6 Which of the following experimental designs has only one group, a treatment, and a posttest?

A. One-shot case study Design

B. One Group Pretest-posttest Design

C. Two Groups Posttest-only Design

D. None of the given options

Q.7 In an experimental research, variables, other than the treatment, that affect the dependent variable are threats to;

A. External reliability

B. External validity

C. Internal reliability

D. Internal validity

Q.8 Which of the following measures of central tendency is referred as 'the most common or frequently occurring number'?

A. None of the given options

B. Median

C. Mode

D. Mean

Q.9 Which of the following groups does not receive the experimental treatment condition?

A. Control group

B. Experimental group

C. Independent group

D. Treatment group

Q.10 In order to read a table, students should first look at;

A. Percentages

B. Variable labels

C. Summation

D. Direction

Q.1 All of the following options are ethical issues in lab experiment EXCEPT;

A. Debriefing the participants accurately after the experiment is over

B. Using research results to disadvantage the participants

C. Exposing participants to physical or mental stress

D. Deceiving subjects by deliberately misleading them

Q.2 When you are confident that the experimental manipulation produced the changes you measured in the dependent variable, your study probably has good _____ validity.

A. Construct

B. Internal

C. External

D. Causal

Q.3 Which of the following is the process of marking segments of data with symbols, descriptive words or category?

A. Concurring

B. Coding

C. Coloring

D. Segmenting

Q.4 Which of the following number of variables involved in Descriptive Statistics?

A. Bivariate

B. All of the given options

C. Multivariate

D. Univariate

Q.5 In an experiment, a variable manipulated by a researcher is called as _____

A. Control

B. Stimulus

C. Dependent

D. Independent

Q.6 In experimental research, a specific event in the external environment occurring between the first and second measurement that is beyond the control of the experimenter and that affects the validity of an experiment, is termed as;

A. Testing Effect

B. History Effect

C. Instrumentation Effect

D. Maturation Effect

Q.7 Which of the following describes the situation in which the control variable intervenes between the original independent variable and the dependent variables?

A. Negative linear relationship

B. Replication pattern

C. Interpretation pattern

D. Suppressor variable pattern

Q.8 The purpose of experimental research is to allow the researcher to control the research situation to evaluate which type of relationship?

A. Multivariate relationship

B. Linear relationship

C. Causal relationship

D. Correlationship

Q.9 Control in experimental research is BEST described as an attempt to:

A. Equate the subjects on the treatment variable

B. Limit threats to external validity

C. Limit threats to internal validity

D. Increase the generalize ability of findings

Q.1 Which of the following measures of central tendency is referred as 'the middle point of the data'?

A. Mode

B. All of the given options

C. Median

D. Mean

Q.2 The group that does not receive the treatment is called;

A. None of the given options

B. Control group

C. Experimental group

D. Independent group

Q.3 Which of the following options is first step to conduct an experiment?

A. Develop a hypothesis

B. Choose an experimental design

C. Locate appropriate subjects

D. Develop valid and reliable measure

Q.4 Which of the following experimental designs has only one group, a treatment, and a posttest?

A. None of the given options

B. Two Groups Posttest-only Design

C. One-shot case study Design

D. One Group Pretest-posttest Design

Q.5 Which of the following describes the situation in which the control variable intervenes between the original independent variable and the dependent variables?

A. Negative linear relationship

B. Replication pattern

C. Interpretation pattern

D. Suppressor variable pattern

Q.6 Which of the following measures of central tendency is referred as 'the most common or frequently occurring number'?

A. Mean

B. Median

C. None of the given options

D. Mode

Q.7 Which of the following is the process of marking segments of data with symbols, descriptive words or category?

A. Segmenting

B. Coding

C. Coloring

D. Concurring

Q.8 When you are confident that the experimental manipulation produced the changes you measured in the dependent variable, your study probably has good _____ validity.

A. Construct

B. Internal

C. Causal

D. External

Q.9 All of the given options are parts of experiment EXCEPT;

A. Statistical control

B. Experimental group

C. Dependent variable

D. Treatment variable

Q.10 Testing is most likely to negatively affect internal validity when_____.

A. The information tested is attitudinal in nature

B. The time between pre- and posttest is short

C. The participants are very low scorers

D. The instrument is unreliable
