STA630 QUIZ 3 File by Tanveer Online Academy

Which of the following is more operational with the help of coding system?	**Content analysis**
Which of the following elements are not required for structuring Observation in Non reactive research?	**Accretion**
How have focus groups been used in market research?	**To discuss reactions to new advertisements**
Which is most likely to yield qualitative data?	**Focus Group**
In an experimental research, variables, other than the treatment, that affect the dependent variable are threats to;	**Internal validity**
A researcher is interested in nonverbal behavior among young adults. The researcher goes to public gathering places in town and observes smiles, gestures, gaze, and touch. This is an example of;	**Naturalistic observation**
Which type of research address major societal change?	**Naturalistic observation**
Which type of research address major societal change?	**Historical Comparative Research**
Threat to internal validity of an experiment arises when some subjects do not continue throughout the experiment, is referred as;	**Mortality**

Which of the following would allow me to have the MOST control over environmental variables when conducting a research study?	**True experimental design**
When you are confident that the experimental manipulation produced the changes you measured in the dependent variable, your study probably has good _____ validity.	**Internal**
Control in experimental research is BEST described as an attempt to:	**Limit threats to internal validity**
Which of the following is true?	**A study is internally valid but may not be externally valid**
In an experimental research, variables, other than the treatment, that affect the dependent variable are threats to;	**Internal validity**
On which component of his field notes was Mr. M focused when he expressed in his notes his thoughts and ideas about what he observed?	**Reflection**
Why might qualitative researchers regard interviewing an attractive alternative to participant observation?	**It reduces the problem of reactivity**
Threat to internal validity of an experiment arises when some subjects do not continue throughout the experiment, is referred as;	**Mortality**

Mr. Raheel is concerned about potential problems with the reliability of his observers, which strategy would you suggest he should follow?	**Specification, training and monitoring**
Which of the following is the process of marking segments of data with symbols, descriptive words or category?	**Coding**
Which of the following terms best describes data that were originally collected at an earlier time by a different person for a different purpose?	**Secondary data**
All of the given options are factors affecting internal validity of an experiment EXCEPT;	**Recency effect**
A census taker often collects data through which of the following?	**Interviews**
Which of the following links with an abstract model of underlying relations or causal mechanism?	**Historical comparative research**
Historians organize evidence usually in which of the following form?	**Narrative form**
All of the following options are ethical issues in lab experiment EXCEPT;	**Debriefing the participants accurately after the experiment is over**
Which of the following can be referred as semantic analysis?	**Latent Coding**
Which type of observer is likely to get a reasonable insight into the participant's views and develop a good rapport with him?	**Participant observer**

Which of the following is not example of historical comparative research?	**Turnover**
In experimental research, a specific event in the external environment occurring between the first and second measurement that is beyond the control of the experimenter and that affects the validity of an experiment, is termed as;	**History Effect**
Testing is most likely to negatively affect internal validity when_____.	**The time between pre- and posttest is short**
Which of the following is NOT a major method of data collection?	**Correlation method**
Which of the following elements are NOT included in Observation in Non Reactive research?	**Accretion**
Threat to internal validity of an experiment arises because of a change in the measuring instrument between pretest and posttest, and not because of the instrument's differential impact at the end, is termed as;	**Instrumentation Effect**
Which term technically describes a situation in which an observer's work in a first-grade classroom disrupts the normal routines due to the curiosity of the students?	**Observer effect**
Which of the following is/are the element/s of Observation in Non Reactive research?	**All**

Secondary /existing data may include which of the following?	**All**
