

OBJECTIVE

1. Densities close to carrying capacity ____ K selected
2. Mesosphere height ____ 85 to 100
3. About 31% of Earth's land surface is covered by ____ forests
4. Activated sludge-sewage mixture is called ____ mixed liquor
5. Pere David's deer was a native species of ____ China
6. speciation, occurs within a single population ____ Sympatric Speciation
7. Average bacteria diameter ____ 0.5 - 2.0 μm
8. Posterior flap of tissue called ____ bursa
9. Protonephridia of Phylum Platyhelminthes ____ Flame cells
10. amoeba engulf food by using pseudopodia ____ phagocytosis
11. the organ of excretion in Platyhelminthes ____ flame cell
12. mosses are examples of ____ non-vascular plants
13. All living organism 16% nitrogen by weight atmosphere is nitrogen by volume ____ 78 %
14. Species are species that occur outside of their natural ranges because of human activity ____ Exotic
15. Two or more species living in same habitat, reciprocally ...each other's evolution ____ Affect
16. Nosema bombycis parasitizes ...Causing the disease pebrine or pepper disease ____ Silkworms
17. Gene interactions fitness of alleles ____ Affect
18. Land pollution --- affects the respiratory system of human beings. ____ Indirectly
19. Extinct hippopotamus like ____ Taxodone
20. Adult human body contain ____ of water ____ 60%
21. Rate at new organic matter formed in all herbivores ____ Secondary Productivity.
22. Near the surface of earth ozone concentration about ppm ____ 0.04-0.15
23. The total average height of troposphere is ____ 13km
24. Adult human body contain ____ of water ____ 60%
25. ----- are characteristics that increase the potential of an organism or species to successfully reproduce in a specified environment. ____ Adaptation
26. The total average height of the troposphere is ____ 13 Km
27. Bird voice box ____ Syrinx
28. ----- Rapidly changes its color. ____ Chameleon

29. The second major layer of Earth's atmosphere is _____ **Stratosphere**
30. He joined ----- of medicine Scotland in 1825 but he was not interested in being physician. _____ **School**
31. -----was first isolated and named in 1817 _____ **Chloroplast**
32. The rate that new organic matter is made by means of individual growth and reproduction in all the herbivores _____ **Secondary Productivity**
33. ----- is removal of forest or stand of trees from land which is then converted to a non-forest use. ____ **Deforestation**
34. Storm water runoff is the number --- cause of stream impairment in urban areas ____ **1**
35. Own circular..... mostly attached to inner membrane _____ **DNA**
36. Winter Sleep Occurs in large animals to ... reserves _____ **Energy**
37. Each successional stage is called a _____ **Seral Stage**
38. Terrestrial amphibians species excreted ____ **urea**
39. Mule produced from a mating of a male donkey and a mare is a sterile hybrid. It is example of _____ **Postmating isolation**
40. Foraminiferans secreted ____ test
41. Open circulatory system released blood into ____ space. _____ **tissue**
42. solar nebula _____ **disc of dirt and gases**
43. Unique excretory system of Phylum Nematod comprised of two or more ____ **renette cell**
44. Nitrogen fixing bacteria use Enzyme _____ **nitrogenase**
45. Rate of reproduction in common carp ____ **300,000/year**
46. Short protein appendages smaller than flagella are ____ **pilli**
47. Cilia are used for locomotion and generation of... currents in water _____ **feeding**
48. Secondary treatment of waste water involves ____ **biological process**
49. ... and decomposers can be at trophic level as well. They return nutrients back in soil to be available for producers _____ **Detritivore**
50. Nervous system of Echinodermata consists of all except ____ **brain**
51. Individuals of a deme are more likely to breed with than with other individuals in the larger population. _____ **one another**
52. T. b. gambiense Causes sleeping sickness in ____ **humans**
53. Fertilization in humans is ____ **internal**
54. Form of lichen ____?
55. Average temperature of earth? ____?
56. Red tides produced by? ____?
57. Cage song is example of? ____?
58. Cage song is example of ____?
59. Cockroach is example of ____?
60. O₂ made stable of atmosphere. ____ **15%**
61. Cause of ozone destruction ____?
62. Soil divided into On the basis of climate. ____?
63. Red blot is caused by ____?

64. Abbreviation of DMS ____?
65. Rock part of the earth core ____?
66. Blind indus is example of ____?
67. Mitochondria has its own ____?
68. Cladogram depict the sequence in the of derived characters-----Origin
69. Form of precipitation that is unusually acidic_____ Acid Rain
70. Decreases in genetic diversity make populations ...likely to withstand environmental stress_____ Less
71. ...allow molecules to freely diffuse from one side of the membrane to the other. ____ Porins
72. Camillo Golgi country is ____ Italian
73. The orientation toward a factor is called ____ Taxis
74. Complexity of ecosystem make it more _____ Stable
75. Lysosome were discovered by the Belgian cytologist de duve in -----by 1950s
76. Major mechanism through which genetic material is generated during molecular evolution. ____ New
77. Regions with identical climate have -----floras and faunas (buffoons' law_____ Different
78. Form of precipitation that is unusually acidic_____ Acid Rain
79. Hydrocarbons Diverse group of organic compounds that contain only and carbon ____ Hydrogen
80. Rise in mean temperature of 0.6-1.0°C in arid coastal areas, arid mountains and hyper arid plains. Observed in _____ Pakistan
81. Aeciospore consists exclusively of ... extracellular ____ Obligatory
82. First vertebrates possess amitotic eggs____ Reptile
83. Speciation occurs in single population____ Sympatric
84. is located above the thermosphere. _____ Exosphere
85. is responsible for sustaining life on earth. _____ Atmosphere
86. All of the frogs in a particular pond or all of the sea urchins in a particular tidepool make up a____ Deme
87. Ozone is made up of ____ O₃
88. Process of emigration cause.... Decrease in Population
89. solar nebula (disc of dirt and gases _____ First Atmosphere
90. Distinct biological communities Formed in response to specific external factors in that environment_____ Biomes
91. Christian deDuve (1967) Isolated from cells by centrifugation____ Liver
92. Cytoskeleton provides support and shape to____ Cell
93. Natural selection ----- variations from a population by favoring one allele over other at a gene locus. _____ Removes
94. Study of the same species in a specific area _____?
95. Geographical limits cause the size of population_____?
96. species having limited range of niche are called_____?

97. When species become more vulnerable _____ extinction
 98. Which of the following is unitedly way of introduce of non-native species __?
 99. *Pisaster ochraceus* is example of _____ ?

100. ecological engineer _____?

101. name of animal feed on large piece of meat ____?

102.% of sunlight gain by the plants ____?

103. primary consumer ____ rabbit and zooplankton?

104. fresh water bodies type ____?

105. marine aquatic system are great source of Biodiversity ____?

106. corals are the tiny living organisms that belong to the group ____?

107. epiphytic plants are example of which form of mutualism ____?

108. heliconia plant is the example of ____?

109. living matter is made of .. % of the carbon and nitrogen ____?

110. Phosphorus reservoirs are ____?

111. Water vapors come ...% from ocean ____?

112. Type of air pollutant ____?

113. term protists introduced by ____?

114. red tides produced by ____?

115. *Mucor* is the example of ____?

116. ozone destruction by elements called ____?

117. salt water occupies more than half of the world ____?

118. 7% of the earth covered by ____?

119. Nile-perch in lake Victoria causes the nutrients of high level ____?

120. functional position of an organism in an environment is ____?

121. in past coal mines used song birds as ____?

122. bacteria convert simple inorganic compounds into organic by use of ____?

123. carnivore fish contain ____?

Large intestine small stomach small intestine large stomach

124. emigration causes the population to:

Increase decrease constant

125. exponential population growth curve is of... shape. ____?

126. low nutrients lake is ____?

127. Mechanism involved in soil formation ____?

128. lakes of excessive amount of dissolved nutrient is ____?

129. hibernating animal possesses ... metabolic rate ____?

130. lichen and mosses are example of ____?

131. insect pollinated flower and humming bird is example of ____?

132. form of mutation ____?

133. spider and poisonous snake is example of ____?

134. diatom is example of ____?

135. cytoplasm coined by ____?

136. ribosomes coined by ____?

SUBJECTIVE

1. Phylum porifera (2)	61. Natural selection
2. Allopatric speciation (2)	62. Global warming
3. Gene bank (2)	63. Genetic drift
4. Peroxisomes (3)	64. Reproduction in Arthropoda
5. Cladistic types (3)	65. Symbiosis types
6. Mammals circulatory system (3)	66. Function of mitochondria
7. Land pollution	67. Effects of noise pollution
8. Parasite types	68. Gross productivity rate
9. Class Ciliophora	69. Limiting factors of population rate
10. Phylum platyhelminthes	70. Natural selection types
11. Excretory system of amphibia	71. Feeding strategies
12. Ways of reproductive isolation	72. Origin of eukaryotes
13. Upper height and lower height of mesosphere	73. Water pollution
14. Effects of global warming	74. Reproduction in ciliophora
15. Autotrophs & heterotrophs	75. Layers of atmosphere
16. Sporozoan	76. Exponential growth
17. Soft inheritance theory and its rejection	77. Parapatric speciation
18. Types of birds flight	78. Types of genetic drift
19. Population size factor	79. Composition of matrix in mitochondria
20. Factors of ecosystem	80. Characteristics of protista
21. Methods of water treatment	81. Aneuploidy & polyploidy
22. What is extinction	82. Monocot & dicot
23. Function of peroxisomes	83. Process of decomposers
24. Overexploitation	84. Effects of habitat fragmentation
25. Habitat characteristics	85. Nucleus composition
26. Horse like animal name	86. Properties of thermosphere
27. Top down bottom up	87. Golgi apparatus
28. Life cycle of plasmodium	88. Theory of natural selection
29. 3 classes of infra in Theria	89. Types of Porifera
30. Polymorphism & example	90. Crypsis
31. Why two kingdom system of classification fails?	91. Classification of invertebrates
32. Inheritance of acquired and soft?	92. Binomial nomenclature
33. Characteristics of mammals	93. Sub class Mastigophora
34. Rate of evolution	94. Metamorphosis & its types
35. Use of water vascular system in Echinodermata	95. Main types of parasites
36. Classification of phylum Animalia	96. K selected species
37. Two benefits of atmosphere	97. Conditions of natural selection
38. Tropospheric zone	98. Who proposed the theory of natural selection and when?
	99. Factors that control ecosystem
	100. Sources of land pollution

39. Ecosystem 40. According to Darwin which bring variation? 41. Systematics 42. Photosynthesis 43. Trophic level 44. What is HABs? 45. Define eutrophication 46. 93. Taxonomical group of slime molds 47. 94. Direct and indirect exfoliation 48. 95. Determinate b/w prokaryotes & eukaryotes with examples 49. 96. What are chemical welfares? Explain with example 50. 97. Percolation 51. 98. Limits of selection? 52. Transpiration 53. ground water percolation 54. types of autotrophs 55. thermosphere 56. Oscillation and density dependent factors 57. types of water pollution 58. consumer food resources in ecosystem 59. acid rain 60. autolysis and putrefaction	101. Aerosols 102. Ozone depletion substances 103. Habitat and components 104. Thylakoids 105. Fitness according to Darwin 106. Order of Amphibians 107. Aposematism 108. Value of biodiversity? 109. Kinds of protozoa 110. Aestivation 111. Types of speciation 112. Carbon cycle 113. Mammals circulatory system 114. 1Halophiles and methanogens 115. Types of parasites 116. Nitrogen resources 117. Limiting factors that result population size? 118.Characteristics of bacteria
