Mid Term Paper December 19, 2015

Q-1 As project manager what are parameters to write feasibility study report? (5 Marks)

Q-2 Name any two languages that can't run w/o interpreter? (LISP, BASIC i wrote) 2 marks

Q-3 Give six attributes of INPUT tag ? (3 marks)

Q-4 What are two ,most important parameters of Algorithim analysis (I wrote time and other is memory which i Forgot) (5 Marks)

Q-5 Steps for SW developer to make a program for an airline.

Q-6 HTML code 4 writing a text of 40 words and 5 rows.

Mid Term Paper December 20, 2015

Q-Server client script definition

Q-Component of OS

Q-Five name of SDLC phase

Q- something about <input>

Mid Term Paper December 28, 2015

2)give examples of string,integer and identifier with variable "SUM"

1)5 core tasks of os

2)write pseudo code for if marks >=40 there was a diagram

3)correct html code relating to text area tag

MISHII BRAVE pdfelement

Remove Watermark Now

4)write html code for input type text for 40 columns

5)atleast two key features of spreadsheets

MCQS

_____ takes more time than deterministic and random. Answer:Monte carlo alogrithm

alert is _____ in javascript. Answer:Method

API is a _____ script. Answer:Server side.

 are example of _____ tags. Answer:Paired Tags.

javascript is_____language. Answer:Object Based (Not object oriented)

_____was the 1st gui based browser. Answer:Mosaic

Mid Term Paper June 25, 2015

q1. heuristic 2 marks
q2. design phases 2 marks
q3. greedy algorithm 3 marks
q4. excel question of writing formulas (cgpa of male and female) 5 marks
q5. html and java script codes WERE GIVEN HAVE TO FIND OUT what is their function. 5 marks
q6. finding which one is objected oriented, near to machine language and structred language (COBOL,JAVA, ASSEMBLY). 3 MARKS.

Mid Term Paper December 20, 2013 to Jan 01, 2013

What is meant by microprocessor's Instruction

Set ?(2) Answer:

The set of machine instructions that a microprocessor recognizes and can execute – the only language microprocessor knows An instruction set includes low-level, a single step-at-a-time instructions, such as add, subtract, multiply, and divide. Each microprocessor family has its unique instruction set.

Describe the function of an action

attribute?(2) Answer:

Specifies the URL that is accessed when the form is being submitted

MISHA pdfelement AVE

Remove Watermark Now

Example:

```
<form name="login" method="post" action="loginScript">
</form>
```

List down the names of any three parameters on which we analyze an algorithm?(3) Answer:

Computational

time Memory

Bandwidth

Logic

functions

What is a programming language? In traditional languages what was the problem by keeping data and methods separate?(3)

Answer:

The process of telling the computer what to do and how to do.

TYPES OF PROGRAMS

Batch Programs

Event-Driven Programs

Write down two positive features of client-side scripting.
Answer:

MISHI BRAVE pdfelement

Remove Watermark Now

(a) **Reduced server load as it does not have to send messages to the user's browser about missing or incorrect data**

(b) **Reduced network traffic as the form's data is sent only once instead of many to's and fro's**

(b) Discuss two deficiencies of JavaScript.

1. **It's either embedded in an HTML page or included in an HTML page so it's open source.**
2. **There are no libraries.**

Q: why comments are important in coding?

Answer:

Comments are included on a Web page to explain how and why you wrote the page the way you did. The commented text is neither displayed in the browser nor does it have any effect on the logical performance of the Web page, and is visible only when the actual code is viewed. Comments can help someone other than the author to follow the logic of the page in the author's absence

JavaScript Comments

Single-line comments

Example:

```
// Author: Bhola
```

Multi-line comments

Example:

```
/* Author: Bhola

Creation Date: 24 March 2003 */
```

My Today paper of CS101 Midterm 22-12-2013
Subjective

Q.No.1 write short keys of following? 2

Answer:

ctrl+c= copy

ctrl+B= Bold

ctrl+S= Save

Ctrl+V= Paste

Q.no.2 Write two important phase of design? 2

Answer:

1. Requiremen
2. Planning
3. Designing

Q.no.3 In which technique Objects are used and working of that? 3
Answer:

An object has *properties* – e.g. a window has size, position, status, etc.

Objects are modified with *methods* that are associated with that object – e.g. a resize a window with *resizeTo(150, 200)*

Q.no.4 word processor WYSIWYG in which aspects is better than Markup Based processor? 5

Answer:

MISHI BRAVE pdfelement

Remove Watermark Now

Generally are harder to learn, but may provide better control and smaller file size Example: LaTeX

Most current PC-based WP's belong to the WYSIWYG category Easy to get started due to the WIMP interface

Example: MS Word, Corel WordPerfect, Sun Star

MISHI BRAVE
pdfelement

Remove Watermark Now

Greedy algorithm?

Answer:

An algorithm that always takes the best immediate, or local solution while finding an Answer. Greedy algorithms may find the overall or globally optimal solution for some optimization problems, but may find less-than-optimal solutions for some instances of other problems.

KEY ADVANTAGE: Greedy algorithms are usually faster, since they don't consider the details of possible alternatives.

3.brute force strategy what is the problem with this approach?

Answer:

A strategy in which all possible combinations are examined and the best among them is selected

It is the tecnique in which all possible solution is checked in all solutions, So it is time comsuming in situation in which large number of possible solution is avaliables.

CHIPBRAVE pdfelement

December 24, 2013

1.greedy algorithm
2.html coding
3.brute force strategy what is the problem with this approach?
4.java script se related tha

December 27, 2013

1. most important 2parameters for analysis of algorithm wid explanation??
2. 2 languages use for coding of web pages??
3. can an object has another object as its property in javascript?? example?
4. greedy algorithm??
5. properties nd behaviours were written and u hv to identify which one is property and which is the behaviour (easiest q)??
   a. car= speed, accelerate, applybreaks, pressure, color
   b. student= name, registration no., study, eat, play

MIDTERM EXAMINATION

Fall 2009

CS101- Introduction to Computing (Session - 4)

Question No: 1 (Marks: 1) - Please choose one

Human are better than computers at:

► Efficiency

Remove Watermark Now

► Accuracy

► **Pattern recognition**

► None of the given choices

Question No: 2 (Marks: 1) - Please choose one

The memory size of the Altair 8800 was

► 128 bytes

► 128 Kilo bytes

► 256 Kilo bytes

► **256 bytes**

Question No: 3 (Marks: 1) - Please choose one

Information on World Wide Web is _____ unified.

► Physically

► **Logically**

► Really

► None of the given choices

Question No: 4 (Marks: 1) - Please choose one

Mainframe Computers are also called ____

► **Enterprise Servers**

► Personal Servers

► Enterprise Managers

► Window Servers

Question No: 5 (Marks: 1) - Please choose one

Which of the following is NOT a category of Mobile Computers

- Laptop
- Palmtop
- **Desktop**
- Wearable

Question No: 6 (Marks: 1) - Please choose one

Hexadecimal number system is based on ---------- digits

- 2
- 8
- 12
- **16**

Question No: 7 (Marks: 1) - Please choose one

<UL> tag is used to

- underline text
- end the line
- create ordered list
- **create unordered list**

Question No: 8 (Marks: 1) - Please choose one

Bringing subsystems together to form the system is called

MISHI BRAVE pdfelement

Remove Watermark Now

► Integration

► **Merging**

► Splitting

► Operation & Maintenance

Question No: 9 (Marks: 1) - Please choose one

_____ give us the ability to manipulate data through reference instead of actual value.

► Constants

► **Variables**

► Data Types

► Operators

Question No: 10 (Marks: 1) - Please choose one

In spreadsheets, cell address A12 means_____.

► Row A, Cloumn 12

► **Row 12, Cloumn A**

► Row 2,Cloumn A1

► Row A1, Cloumn 2

Question No: 11 (Marks: 1) - Please choose one

Which of the following is/are the parts of Operating system components?

► **All of these**

► GUI

Question No: 27 (Marks: 1)

What is the Brute Force Strategy?

Answer:. A staretegy in which all possible combinations are examined and best among them is selected. Brute force (also known as brute force cracking) is a trial and error method used by application programs to decode encrypted data such as passwords or Data Encryption Standard (DES) keys, through exhaustive effort (using brute force) rather than employing intellectual strategies.

Question No: 28 (Marks: 1)

What is java script?

Answer: JavaScript is an object-oriented scripting language used to enable programmatic access to objects within both the client application and other applications.

It is primarily used in the form of client-side JavaScript, implemented as an integrated component of the web browser, allowing the development of enhanced user interfaces and dynamic websites

Question No: 29 (Marks: 2)

How can you explain control unit?

Answer: Control unit is a computerized part of the speech processor. Most of the controls, such as program, volume and sensitivity, are located on the control unit.

Question No: 30 (Marks: 3)

How a designer makes Structured Design?

Answer: Structured Design: Materials and member type, size, and configuration to carry loads in a safe and serviceable fashion.

MISHIBRAVE

Remove Watermark Now

In general, structural design implies the engineering of stationary objects such as buildings and bridges, or objects that may be mobile but have a rigid shape such as ship hulls and aircraft frames tructural design involves at least five distinct phases of work, project requirements, materials, structural scheme, analysis, and design It is insufficient in most cases, for the designer to consider a solution, a design. He should evaluate several alternate designs and choose the best in the sense of maximizing such technical objectives as efficiency, reliability, and maintainability while satisfying such design constraints as memory size and response time.

Question No: 31 (Marks: 5)

MISHI BRAVE
pdfelement

Remove Watermark Now

What is Turing machine? Who invented it and also explain how a Turing test is conducted?

Answer: A Turing machine is a theoretical device that manipulates symbols contained on a strip of tape. Despite its simplicity, a Turing machine can be adapted to simulate the logic of any computer algorithm, and is particularly useful in explaining the functions of a CPU inside of a computer. The "Turing" machine was designed by Alan Turing in 1937.

The Turing test is a proposal for a test of a machine's ability to demonstrate intelligence. It proceeds as follows a human judge engages in a natural language conversation with one human and one machine, each of which tries to appear human. All participants are placed in isolated locations. If the judge cannot reliably tell the machine from the human, the machine is said to have passed the test. In order to test the machine's intelligence rather than its ability to render words into audio, the conversation is limited to a text-only channel such as a computer keyboard and screen.

If a computer pass the test ,we can say that a machine can think.

Question No: 32 (Marks: 5)

What are JavaScript literal and what are its types?

Answer: The raw data that make up the root of data types are called "literals." These are, in effect, literally what they represent themselves to be. Numbers, strings, and Boolean values make up the core set of literals in JavaScript. Little mystery exists with literals, but important differences exist between them. In JavaScript, data types include strings, which are simply quoted characters, numbers, Boolean, Objects and even a type which has no value at all, Null. Since JavaScript is a loosely typed language, you don't neccessarily need to know what type of data every value is (although it certainly helps).

Every piece of data in these categories is known as a value. When a value is referred to outright in a statement, it is called a literal value. For the same reason people are identified by names as opposed to "human" or "person", literal values can be named in order to make repeated reference to them practical, efficent and readable. These names are called variables.

MUSHTBRAVE pdfelement

Remove Watermark Now

Literals can be of several types. Some of them are:
Array Literals

Boolean Literals
Floating-Point
Literals Integers

Object Literals
String Literals

What is Randomized Algorithm?

Randomized Algorithm:

Any algorithm whose behavior is not only determined by the input, but also values produced by a random number generator

These algorithms are often simpler and more efficient than deterministic algorithms for the same problem. And because of there simplicity they are easier

Remove Watermark Now

to analyze which is the most important thing in the decision making of an algorithm.

Question No: 29 (Marks: 2)

What was the name of first super computer. When it was introduced?

CRAY1 is the first computer and it was introduced in 1973

Question No: 30 (Marks: 3)

How a designer makes Structured Design?

Structured Design is known as a Top-down design.

The designed first conceives about the High level design and then further designs the details of the high level design components and it goes on and on.

Making small changes in the functionality of the systems sometimes leads to major re-design exercise. Structured design separates the functionality from programs data and that's why program's deisgned by this methodology are difficult to maintain.

Question No: 31 (Marks: 5)

Why microprocessor uses the binary number system and not the decimal or any other number system?

The processor is the logic of a computer and functions comparably to a human central nervous system, directing signals from one component to another and enabling everything to happen. A microprocessor is made from miniaturized transistors and other circuit elements on a single

semiconductor integrated circuit (IC) . These are made up oof semiconductor and silicon.

Microprocessor are composed of components which has only two states either 0 or 1. Binary number system is also composed of these two states.

MISHBRAVE

Remove Watermark Now

Microprocessor till today only understand the machine language and machine language is only based on binary number system. Even today's 64 bit microprocessors are also based on this technology.

Question No: 32 (Marks: 5)

Why do we need an Interactive Form in a webpage?

1. Interactive forms are used to gather user data and interact with the user.
2. Forms can be made interactive with the use of client side scripting and server side sciprting.
3. In HTML, <FORM> </FORM> tag is used to insert the form in a web page and it always lie in <BODY></BODY> html tag.
4. without form's web site is only "READ ONLY".
5. with the help of forms a user and can search the contents, place order for goods and services.
6. Forms can be simple or very complex, based on the requirement.

forms can contain a single element or many e.g text area, buttons

Question No: 30 (Marks: 3)

What is Home Page of a web site?

The pages of a website can usually be accessed from a simple Uniform Resource Locator (URL) called the homepage. The URLs of the pages organize them into a hierarchy, although hyper linking between them conveys the reader's perceived site structure and guides the reader's navigation of the sit

Question No: 31 (Marks: 5)

Why microprocessor uses the binary number system and not the decimal or any other number system?

At this point in computer science we only have two 'digital' states, which is that any bit can only be either on or off.

The on/off is commonly used to represent yes/no.(On(1) = Yes, Off(0) = No)

A microprocessor can only see if a signal is there or is missing, in other words, if the signal is on or off, or a bit is a 1 or a 0.

Question No: 32 (Marks: 5)

What is the difference between Interactive-mode and Batch-mode Application Software?

MISHRAVE

Remove Watermark Now

Batch files are useful for running a sequence of executables automatically and are often used by system administrators to automate tedious processes while interactive mode applications attract the attention of user this kind of applications can not execuate untill User have interest to execure and complete the process.

Q29

What is the name of HTML tag, that has Href attribute and What is the Purpose of Href?

Solution:-

<A HREF = *"action"* > *label* </A>

It is used to to create Links between pages, or we can used it as "mailto" function.

Q30

Write three characteristics of JavaScript.

Solution:-

(1) JavaScript has numerous operators, classified in many categories.
(2) Terminate all JavaScript statements with a semicolon. It is not always necessary, but highly recommended.
(3) JavaScript ignores any extra white spaces or line breaks that you put in the code
(4) Although JavaScript allows variable declaration, it does not require it - except in the case when
(5)

Q31

Give reasons why we need semantic web?

Solution:-

Whereas, today's Web's content is designed for humans to read; the Semantic Web's content will be designed for computers to understand meaningfully. However, the

Semantic Web is not a replacement but an extension of the present Web, in which info is given well defined meaning

Q32

What are the two key features of UNDO command in MS-Excel ?

Solution:-

1. Allows you to recover from your mistakes
2. Allows you to experiment without risk

MISHI BRAVE pdfelement

Question No: 27 (Marks: 1)

What is the Brute Force Strategy?

Answer:. A staretegy in which all possible combinations are examined and best among them is selected. Brute force (also known as brute force cracking) is a trial and error method used by application programs to decode encrypted data such as passwords or Data Encryption Standard (DES) keys, through exhaustive effort (using brute force) rather than employing intellectual strategies.

Question No: 28 (Marks: 1)

What is java script?

Answer: JavaScript is an object-oriented scripting language used to enable programmatic access to objects within both the client application and other applications.

It is primarily used in the form of client-side JavaScript, implemented as an integrated component of the web browser, allowing the development of enhanced user interfaces and dynamic websites

Question No: 29 (Marks: 2)

How can you explain control unit?

Answer: Control unit is a computerized part of the speech processor. Most of the controls, such as program, volume and sensitivity, are located on the control unit.

Question No: 30 (Marks: 3)

How a designer makes Structured Design?

MISHI BRAVE pdfelement

Remove Watermark Now

Answer: Structured Design: Materials and member type, size, and configuration to carry loads in a safe and serviceable fashion.

In general, structural design implies the engineering of stationary objects such as buildings and bridges, or objects that may be mobile but have a rigid shape such as ship hulls and aircraft frames tructural design involves at least five distinct phases of work, project requirements, materials, structural scheme, analysis, and design

It is insufficient in most cases, for the designer to consider a solution, a design. He should evaluate several alternate designs and choose the best in the sense of maximizing such technical objectives as efficiency, reliability, and maintainability while satisfying such design constraints as memory size and response time.

Question No: 31 (Marks: 5)

What is Turing machine? Who invented it and also explain how a Turing test is conducted?

Answer: A Turing machine is a theoretical device that manipulates symbols contained on a strip of tape. Despite its simplicity, a Turing machine can be adapted to simulate the logic of any computer algorithm, and is particularly useful in explaining the functions of a CPU inside of a computer. The "Turing" machine was designed by Alan Turing in 1937.

The Turing test is a proposal for a test of a machine's ability to demonstrate intelligence. It proceeds as follows a human judge engages in a natural language conversation with one human and one machine, each of which tries to appear human. All participants are placed in isolated locations. If the judge cannot reliably tell the machine from the human, the machine is said to have passed the test. In order to test the machine's intelligence rather than its ability to render words into audio, the conversation is limited to a text-only channel such as a computer keyboard and screen.

If a computer pass the test ,we can say that a machine can think.

Question No: 32 (Marks: 5)

What are JavaScript literal and what are its types?

MSHIBRAVE pdfelement

Remove Watermark Now

Answer: The raw data that make up the root of data types are called "literals." These are, in effect, literally what they represent themselves to be. Numbers, strings, and Boolean values make up the core set of literals in JavaScript. Little mystery exists with literals, but important differences exist between them. In JavaScript, data types include strings, which are simply quoted characters, numbers, Boolean, Objects and even a type which has no value at all, Null. Since JavaScript is a loosely typed language, you don't neccessarily need to know what type of data every value is (although it certainly helps).

Every piece of data in these categories is known as a value. When a value is referred to outright in a statement, it is called a literal value. For the same reason people are identified by names as opposed to "human" or "person", literal values can be named in order to make repeated reference to them practical, efficent and readable. These names are called variables.

Literals can be of several types. Some of them are:

Array Literals

Boolean Literals

Floating-Point Literals

Integers

Object Literals

String Literals

Question No: 27 (Marks: 1)

Define URL

URL(Uniform resource locator)

URL (Uniform Resource Locator, previously Universal Resource Locator) - is the address of a file (resource) accessible on the Internet. The type of file or resource depends on the Internet application protocol.

Examples of URLs: http://vu.edu.pk

http://www.yahoo.com

Question No: 31 (Marks: 5)

Why microprocessor uses the binary number system and not the decimal or any other number system?

MISHIT BRAVE
pdfelement

Remove Watermark Now

The processor is the logic of a computer and functions comparably to a human central nervous system, directing signals from one component to another and enabling everything to happen. A microprocessor is made from miniaturized transistors and other circuit elements on a single

semiconductor integrated circuit (IC) . These are made up oof semiconductor and silicon.

Microprocessor are composed of components which has only two states either 0 or 1. Binary number system is also composed of these two states.

Microprocessor till today only understand the machine language and machine language is only based on binary number system. Even today's 64 bit microprocessors are also based on this technology.

Question No: 32 (Marks: 5)

Why do we need an Interactive Form in a webpage?

1. Interactive forms are used to gather user data and interact with the user.
2. Forms can be made interactive with the use of client side scripting and server side sciprting.
3. In HTML, <FORM> </FORM> tag is used to insert the form in a web page and it always lie in <BODY></BODY> html tag.
4. without form's web site is only "READ ONLY".
5. with the help of forms a user and can search the contents, place order for goods and services.
6. Forms can be simple or very complex, based on the requirement.
7. forms can contain a single element or many e.g text area, buttons
8. **Question No: 27 (Marks: 1)**
9. What is the key feature of batch programs?
10.
11. **Batch files are useful for running a sequence of executables automatically**
12. **Question No: 28 (Marks: 1)**

22. What is Home Page of a web site?

23.

24. **The pages of a website can usually be accessed from a simple Uniform Resource Locator (URL) called the homepage. The URLs of the pages organize them into a hierarchy, although hyper linking between them conveys the reader's perceived site structure and guides the reader's navigation of the sit**

25.

26. **Question No: 31 (Marks: 5)**

27. Why microprocessor uses the binary number system and not the decimal or any other number system?

28.

29. **At this point in computer science we only have two 'digital' states, which is that any bit can only be either on or off.**

30. **The on/off is commonly used to represent yes/no.(On(1) = Yes, Off(0) = No)**

31. **A microprocessor can only see if a signal is there or is missing, in other words, if the signal is on or off, or a bit is a 1 or a 0.**

32.

33.

34. **Question No: 32 (Marks: 5)**

35. What is the difference between Interactive-mode and Batch-mode Application Software?

36. Batch files are useful for running a sequence of executables automatically and are often used by system administrators to **automate** tedious processes while interactive mode applications attract the attention of user this kind of applications can not execuate untill

37. User have interest to execure and complete the process.

Question No: 27 (Marks: 1)

What is the key feature of object-oriented design?

ANSWER: The key feature of object-oriented design is that it treats every thing as object having properties and methods. These objects are separately treated and designed and once designed it can be used in any other system. So once designed can be used many times.

Question No: 28 (Marks: 1)

Write one purpose of using spreadsheets ?

MISHI BRAVE pdfelement

Remove Watermark Now

ANSWERS: Purpose of spreadsheets is that it can do calculations on data accurately.

Question No: 29 (Marks: 2)

List down two advantages of writing Pseudo Code

Answers: The advantages of pseudo code are:

- It is quite similar to human language so easy to understand.
- It is close to real code so easy to write real code from it.

Question No: 30 (Marks: 3)

How can we calculate total number of rows in the truth table?

ANSWER: The formula for calculating number of rows in truth table is 2^n

Where n = number of inputs

Question No: 31 (Marks: 5)

Differentiate between Vector graphics and Bit-mapped graphics.

ANSWER:

VECTOR GRAPHICS	BIT MAPPED IMAGES
1. Treat everything as an object	1. Treats everything as a bit map.
2. Is resolution independent	2. Resolution dependent

Question No: 39 (Marks: 5)

What is a Relational Database? Give the names of any three RDBMS software. (2+3)

MISHIT BRAVE
pdfelement

Remove Watermark Now

Relational Databases

• Databases consisting of two or more related tables are called *relational databases*

• A typical relational database may have anywhere from 10 to over a thousand tables

• Each column of those tables can contain only a single type of data (contrast this with spreadsheet columns!)

• Table rows are called records; row elements are called fields

• A relational database stores all its data inside tables, and nowhere else

• All operations on data are done on those tables or those that are generated by table operations

• Tables, tables, and nothing but tables!

RDBMS

• Relational DBMS software

• Contains facilities for creating, populating, modifying, and querying relational databases

• Examples:

–Access

–FileMaker Pro

–SQL Server

–Oracle

MISHI BRAVE pdfelement

Question No: 40 (Marks: 10)

Define the following terms.

¬ Object

¬ Event Handler

¬ Local Variable

¬ Scope of Variable

Remove Watermark Now

¬ Array

Object

A named collection of properties(data, state) & methods (instructions, behavior)

Event Handler

MISHTI BRAVE
pdfelement

Remove Watermark Now

An event handler is a command which calls a function when an event happens, such as the user clicking a button

Local Variable

Declaring variables (using the var keyword) within a function, makes them local•They are available only

within the function and hold no meaning outside of it

Scope of Variable

Defining the space in which a variable is effective is known as

defining the scope of a variable. A variable can be either local or global in scope

Array

¾¾¾¾

Question No: 27 (Marks: 1)

What is the Brute Force Strategy?

Answer:. A staretegy in which all possible combinations are examined and best among them is selected. Brute force (also known as brute force cracking) is a trial and error method used by application programs to decode encrypted data such as passwords or Data Encryption Standard (DES) keys, through exhaustive effort (using brute force) rather than employing intellectual strategies.

Question No: 28 (Marks: 1)

What is java script?

Answer: JavaScript is an object-oriented scripting language used to enable programmatic access to objects within both the client application and other applications.

It is primarily used in the form of client-side JavaScript, implemented as an integrated component of the web browser, allowing the development of enhanced user interfaces and dynamic websites

Question No: 29 (Marks: 2)

How can you explain control unit?

Answer: Control unit is a computerized part of the speech processor. Most of the controls, such as program, volume and sensitivity, are located on the control unit.

Question No: 30 (Marks: 3)

How a designer makes Structured Design?

Answer: Structured Design: Materials and member type, size, and configuration to carry loads in a safe and serviceable fashion.

In general, structural design implies the engineering of stationary objects such as buildings and bridges, or objects that may be mobile but have a rigid shape such as ship hulls and aircraft frames tructural design involves at least five distinct phases of work, project requirements, materials, structural scheme, analysis, and design

It is insufficient in most cases, for the designer to consider a solution, a design. He should evaluate several alternate designs and choose the best in the sense of maximizing such technical objectives as efficiency, reliability, and maintainability while satisfying such design constraints as memory size and response time.

Question No: 31 (Marks: 5)

What is Turing machine? Who invented it and also explain how a Turing test is conducted?

MISHI BRAVE pdfelement

Remove Watermark Now

Answer: A Turing machine is a theoretical device that manipulates symbols contained on a strip of tape. Despite its simplicity, a Turing machine can be adapted to simulate the logic of any computer algorithm, and is particularly useful in explaining the functions of a CPU inside of a computer. The "Turing" machine was designed by Alan Turing in 1937.

The Turing test is a proposal for a test of a machine's ability to demonstrate intelligence. It proceeds as follows a human judge engages in a natural language conversation with one human and one machine, each of which tries to appear human. All participants are placed in isolated locations. If the judge cannot reliably tell the machine from the human, the machine is said to have passed the test. In order to test the machine's intelligence rather than its ability to render words into audio, the conversation is limited to a text-only channel such as a computer keyboard and screen.

If a computer pass the test ,we can say that a machine can think.

MISHI BRAVE
pdfelement

Question No: 32 (Marks: 5)

What are JavaScript literal and what are its types?

Answer: The raw data that make up the root of data types are called "literals." These are, in effect, literally what they represent themselves to be. Numbers, strings, and Boolean values make up the core set of literals in JavaScript. Little mystery exists with literals, but important differences exist between them. In JavaScript, data types include strings, which are simply quoted characters, numbers, Boolean, Objects and even a type which has no value at all, Null. Since JavaScript is a loosely typed language, you don't neccessarily need to know what type of data every value is (although it certainly helps).

Remove Watermark Now

Every piece of data in these categories is known as a value. When a value is referred to outright in a statement, it is called a literal value. For the same reason people are identified by names as opposed to "human" or "person", literal values can be named in order to make repeated reference to them practical, efficent and readable. These names are called variables.

Literals can be of several types. Some of them are:

Array Literals

Boolean Literals

Floating-Point Literals

Integers

Object Literals

String Literals

Question No: 27 (Marks: 1)

Define URL

URL(Uniform resource locator)

URL (Uniform Resource Locator, previously Universal Resource Locator) - is the address of a file (resource) accessible on the Internet. The type of file or resource depends on the Internet application protocol.

Examples of URLs: http://vu.edu.pk

http://www.yahoo.com

Differentiate between LAN and WAN with one example of each.

Lan is a local area network where as wan is a wide area network

MISHIIBRAVE
pdfelement

Remove Watermark Now

Lan can be used in a specific areas with limited computers where as wan can be used on computers shared by large distances

For example lan can be used on pc s or an organization located in one building but wan can be used on large scales like banks all over or in any Large communication systems

Question No: 36 (Marks: 3)

What are Trojan Horses ?

Trojen horses are a kind of cyber crime , they are v harmful to computer because they are stand alone programme and the look like what they are not like any thing amusing or not harmless like games..

Question No: 37 (Marks: 3)

Elaborate Rester Graphics with examples.

A raster graphics image, digital image, or bitmap, is a data file or structure representing a generally rectangular grid of pixels, or points of color, on a computer monitor, paper, or other display device.

To illustrate the matter further - here's the letter "J":

J

Look closely at it... Take a magnifying glass to it if you like. You see a "J", the computer sees something more like this, where '.' represents a zero and 'X' represents a one:

....X

....X

MISHIBRAVE pdfelement

Remove Watermark Now

....X

....X

....X

....X

....X

X...X

X...X

.XXX.

Where you see a zero, the computer instructs its video hardware to paint the current background color. A one calls for the current foreground color. Yes, it is actually a bit more complicated, but it all basically boils down to one bit or the other making a distinction between the colors of adjacent pixels, which together form an image.

MISHRA BRAVE

Question No: 38 (Marks: 5)

What are the important properties, methods and event handlers of image object?

The primary use of the image object is to download an image into the cache before it is needed to display , image object can be used to create different kinds of animations or to display one of several images based on the desired requirement , in java script image object can be used to display the required pre loaded image

Properties of image object is : height , width ,hspace ,vspace , src , name border etc

Remove Watermark Now

Methods :none

Event handlers:on aboart , onload, onerror etc

Question No: 39 (Marks: 5)

Write the JavaScript code for the Function SumOddNumbers(maxNumber) that can add non-negative odd numbers up to maxNumber and return their sum.

```
Function sum odd numbers(maxnumber){var sum=0;
For(i=0;  <maxNumbers;I++)
{
{
if(i / 2 == 1 || i == 1)
sum += i;
}
return sum;
}
```

Question No: 17 (Marks: 2)

Write the major types of softwares with examples?

Answer..

System SW

System software is responsible for controlling, integrating, and managing the individual

hardware components of a computer system.

System software performs tasks like transferring data from memory to disk, or rendering

text onto a display Specific kinds of system software include loading programs, operating

systems, device drivers, compilers, assemblers, linkers, and utilities.

Software libraries that perform generic functions also tend to be regarded as system

software. System software stored on non-volatile storage on integrated circuits is usually

termed firmware. These generally perform the background tasks in a computer. These

programs, many times, talk directly to the HW.

Application SW

Programs that generally interact with the user to perform work that is useful to the user.

MISHI BRAVE
pdfelement

Remove Watermark Now

These programs generally talk to the HW through the assistance of system SW.

Question No: 17 (Marks: 2)

Explain briefly the different techniques that are used to embed JavaScript code in a web page?

Answer., Client-side JavaScript code is embedded within HTML documents in a number of ways:

- **Between a pair of <script> and </script> tags**
- **From an external file specified by the src attribute of a** <script> tag
- **In an event handler, specified as the value of an HTML attribute such as onclick or onmouseover**
- **As the body of a URL that uses the special javascript:** protocol

The following sections document each of these JavaScript embedding techniques in more detail. Together, they explain all the ways to include JavaScript in web pages -- that is, they explain the allowed structure of JavaScript programs on the client side.

MISHIBRAVE pdfelement

Question No: 18 (Marks: 2)

What is an interpreter? Write its one benifit over compiler.

Remove Watermark Now

Answere

Interpreter is a program that executes instructions written in a high-level language

An interpreter translates high-level instructions into an intermediate form, which it then

executes. In contrast, a compiler translates high-level instructions directly into machine

language

Compiled programs generally run faster than interpreted programs.

compilation stage during which the whole of the high-level code is translated into

machine instructions in one go. This process can be time-consuming if the program is

long.

The interpreter can immediately execute high-level programs, without waiting for the

completion of the translation process

The choice of which language to use can also depend on the:

-Type of computer the program is to run on,

- Expertise of the programmer

Interpreters: immediate response, but execute code slowly.

Compilers: Takes longer to compile, but super-fast execution.

MISHI BRAVE
pdfelement

Remove Watermark Now

Question No: 19 (Marks: 2)

Whether response time of a microprocessor is greater or less than that of RAM?

A microprocessor incorporates most or all of the functions of a computer's central processing unit (CPU) on a single integrated circuit (IC, or microchipThe first microprocessors emerged in the early 1970s and were used for electronic calculators, using binary-coded decimal (BCD) arithmetic in 4-bit words. Other embedded uses of 4-bit and 8-bit microprocessors, such as terminals, printers, various kinds of automation etc, followed soon after. Affordable 8-bit microprocessors with 16-bit addressing also led to the first general-purpose microcomputers from the mid-1970s on.

During the 1960's, computer processors were often constructed out of small and medium-scale ICs containing from tens to a few hundred transistors. The integration of a whole CPU onto a single chip greatly reduced the cost of processing power. From these humble beginnings, continued increases in microprocessor capacity have rendered other forms of computers almost completely obsolete (see history of computing hardware), with one or more microprocessors used in everything from the smallest embedded systems and handheld devices to the largest mainframes and supercomputers.

Since the early 1970s, the increase in capacity of microprocessors has been a consequence of Moore's Law, which

MSHIBRAVE

Remove Watermark Now

suggests that the complexity of an integrated circuit, with respect to minimum component cost, doubles every two years

In the late 1990s, and in the high-performance microprocessor segment, heat generation (TDP), due to switching losses, static current leakage, and other factors, emerged as a leading developmental constraint

SW Life-Cycle

The sequence of phases a SW goes through from the concept to decommissioning

It is important to think about all those phases before the design work starts

Thinking about the future phases generally results in:

Shorter delivery times

Reduced costs of development

A system of higher quality

A Case in Point

I didn't discuss with the customer the specs of the HW & OS before developing a

particular e-commerce SW.

I wrote it for the HW/OS that was easily available to me.

Unfortunately that HW/OS combination differed from what was easily available to the

client Result: Huge amount of rework. Higher cost. Delayed delivery. Lower quality.

Therefore, now before designing a SW system, I first write down the installation manual,

and get it OK'd by the customer. I do the same with the Operation & Maintenance

manual as well.

Question No: 23 (Marks: 5)

Elaborate greedy algorithm definition with solid example in favour and one counter example?

An algorithm that always takes the best immediate, or local solution while finding an

answer

Greedy algorithms may find the overall or globally optimal solution for some

optimization problems, but may find less-than-optimal solutions for some instances of

other problems

KEY ADVANTAGE: Greedy algorithms are usually faster, since they don't consider the

details of possible alternatives

Greedy Algorithm: Counter Example

During one of the international cricket tournaments, one of the teams intentionally lost a

match, so that they could qualify for the next round

If they had won that particular match, some other team would have qualified

This is an example of a non-greedy algorithm

Greedy Algorithm: Example

MISHI BRAVE
pdfelement

Remove Watermark Now

A skier skiing downhill on a mountain wants to get to the bottom as quickly as possible

What sort of an algorithm should the skier be using?

The greedy-algorithm approach will be to always have the skies pointed towards the

largest downhill slope (*dy*/*dx*), at all times

What is the problem with that approach?

In what situations that will be the best algorithm?

In which situations would it perform poorly?

Insert text: Allows you to insert text anywhere in the document.
delete text: Allows you to erase characters, words, lines, or pages as easily as you can cross them out on paper.

cut and paste : Allows you to remove (cut) a section of text from one place in a document and insert (paste) it somewhere else.

copy : Allows you to duplicate a section of text.

page size and margins : Allows you to define various page sizes and margins, and the word processor will automatically readjust the text so that it fits.

search and replace : Allows you to direct the word processor to search for a particular word or phrase. You can also direct the word processor to replace one group of characters with another everywhere that the first group appears.
word wrap : The word processor automatically moves to the next line when you have filled one line with text, and it will readjust text if you change the margins.

print: Allows you to send a document to a printer to get hardcopy.
file management : Many word processors contain file management

capabilities that allow you to create, delete, move, and search for files.
font specifications: Allows you to change fonts within a document. For example, you can specify bold, italics, and underlining. Most word processors also let you change the font size and even the typeface.
footnotes and cross-references: Automates the numbering and placement of footnotes and enables you to easily cross-reference other sections of the document.

MISHRAVE

Remove Watermark Now

graphics graphics: Allows you to embed illustrations and graphs into a document. Some word processors let you create the illustrations within the word processor; others let you insert an illustration produced by a different program.

headers , footers , and page numbering: Allows you to specify customized headers and footers that the word processor will put at the top and bottom of every page. The word processor automatically keeps track of page numbers so that the correct number appears on each page.

layout : Allows you to specify different margins within a single document and to specify various methods for indenting paragraphs.

macros : A macro is a character or word that represents a series of keystrokes. The keystrokes can represent text or commands. The ability to define macros allows you to save yourself a lot of time by replacing common combinations of keystrokes.

merges: Allows you to merge text from one file into another file. This is particularly useful for generating many files that have the same format but different data. Generating mailing labels is the classic example of using merges.

spell checker : A utility that allows you to check the spelling of words. It will highlight any words that it does not recognize.
tables of contents and indexes: Allows you to automatically create a table of contents and index based on special codes that you insert in the document.
thesaurus: A built-in thesaurus that allows you to search for synonyms without leaving the word processor.

Question No: 17 (Marks: 2)

Write the

major types of softwares with examples?

Answer..

System SW

System software is responsible for controlling, integrating, and managing the

MISHI BRAVE
pafelement

Remove Watermark Now

individual

hardware components of a computer system.

MISHTI BRAVE
pdfelement

Remove Watermark Now

System software performs tasks like transferring data from memory to disk, or

rendering

text onto a display Specific kinds of system software include loading programs,

operating

systems, device drivers, compilers, assemblers, linkers, and utilities.

Software libraries that perform generic functions also tend to be regarded as system

software. System software stored on non-volatile storage on integrated circuits is

usually

termed firmware. These generally perform the background tasks in a computer. These

programs, many times, talk directly to the HW.

Application SW

Programs that generally interact with the user to perform work that is useful to the

user.

These programs generally talk to the HW through the assistance of system SW.

Question No: 18 (Marks: 2)

What is

MISHI BRAVE pdfelement

the major difference between paragraph <p> and Line Break
 tags?

MISHIT BRAVE
pdfelement

Remove Watermark Now

<P> … </P>

Paragraph

Line break

Question No: 19 (Marks: 2)

Why

PASCAL was designed and what is the problem with PASCAL?

Answer,,

Pascal is very good for writing well-structured and readable programs, but it is not as

flexible as the C programming language

C++ embodies powerful object-oriented features, but it is complex and difficult to

learn

What changes in the field of computer languages can we expect in the near future

Question No: 20 (Marks: 3)

What are

the key requirements of E-commerce Software?

Answer..

MISHI BRAVE
pdfelement

Remove Watermark Now

E-Commerce Software

Key requirements:

Reliability

Security

MISHIT BRAVE

Question No: 17 (Marks: 2)

Explain briefly the different techniques that are used to embed JavaScript code in a

MISHI BRAVE
pdfelement

Remove Watermark Now

web page?

Answer., Client-side JavaScript code is embedded within HTML documents in a

number of ways:

- Between a pair of <script> and </script> tags
- From an external file specified by the src attribute of a <script> tag
- In an event handler, specified as the value of an HTML attribute such as onclick

or onmouseover

- As the body of a URL that uses the special javascript: protocol

The following sections document each of these JavaScript embedding techniques in

more detail. Together, they explain all the ways to include JavaScript in web pages --

that is, they explain the allowed structure of JavaScript programs on the client side.

Question No: 18 (Marks: 2)

What is an interpreter? Write its one benifit over compiler.

Answere

Interpreter is a program that executes instructions written in a high-level language

An interpreter translates high-level instructions into an intermediate form, which it

then

MISHIBRAVE
pdfelement

Remove Watermark Now

executes. In contrast, a compiler translates high-level instructions directly into

machine

language

Compiled programs generally run faster than interpreted programs.

compilation stage during which the whole of the high-level code is translated into

machine instructions in one go. This process can be time-consuming if the program is

long.

The interpreter can immediately execute high-level programs, without waiting for the

completion of the translation process

The choice of which language to use can also depend on the:

-Type of computer the program is to run on,

- Expertise of the programmer

Interpreters: immediate response, but execute code slowly.

Compilers: Takes longer to compile, but super-fast execution.

Question No: 19 (Marks: 2)

Whether response time of a microprocessor is greater or less than that of RAM?

A **microprocessor** incorporates most or all of the functions of a computer's central

MISHIPRAVE pdfelement

Remove Watermark Now

processing unit (CPU) on a single integrated circuit (IC, or microchipThe first

MISHTI BRAVE
pdfelement

Remove Watermark Now

microprocessors emerged in the early 1970s and were used for electronic calculators,

using binary-coded decimal (BCD) arithmetic in 4-bit words. Other embedded uses of

4-bit and 8-bit microprocessors, such as terminals, printers, various kinds of

automation etc, followed soon after. Affordable 8-bit microprocessors with 16-bit

addressing also led to the first general-purpose microcomputers from the mid-1970s

on.

During the 1960's, computer processors were often constructed out of small and

medium-scale ICs containing from tens to a few hundred transistors.

The integration

of a whole CPU onto a single chip greatly reduced the cost of processing power. From

these humble beginnings, continued increases in microprocessor capacity have

rendered other forms of computers almost completely obsolete (see history of

computing hardware), with one or more microprocessors used in everything from the

smallest embedded systems and handheld devices to the largest mainframes and

supercomputers.

MISHI BRAVE
pdfelement

Remove Watermark Now

Since the early 1970s, the increase in capacity of microprocessors has been a

consequence of Moore's Law, which suggests that the complexity of an integrated

circuit, with respect to minimum component cost, doubles every two years

In the late 1990s, and in the high-performance microprocessor segment, heat

generation (TDP), due to switching losses, static current leakage, and other factors,

emerged as a leading developmental constraint

Question No: 20 (Marks: 3)

Write formula for the following expression.

1) If we want to add the value from cell C3 to C10 we can write

2) If we want to add the value of C2 to the value of C4 and than multiply by

C6 , the formula is written for

1.answer formula

=sum(c3:c10) then enter

=(c2+c10Xc6) then enter

Question No: 21 (Marks: 3)

How can we enter data in more than one line in an html form?

Question No: 30 (Marks: 3)

How can you manipulate the address of a file (resource) accessible on the Internet?

World wide web ,URL, domain name

Question No: 31 (Marks: 5)

Write Hyper Link for a Web Page and for an Email Address.

MISHIIBRAVE
pdfelement

Remove Watermark Now

Ans: Following are the Hyper link for a web page

www.vu.edu .pk
www.yahoo.com
www.hotmail.com

Question No: 32 (Marks: 5)

Write down the requirement of Desktop Publishing?
User requirement

Softwear requirements

. Laser printer
Scanner

DESktop publishing softwears
e.g

adobe page maker
Ms publisher

High end pc with a large screen monitor
Formate

Numerical data
Text

Question No: 27 (Marks: 1)

What is the key feature of batch programs?

Answer: The key feature is no user interaction with computer while a program is running.

Question No: 28 (Marks: 1)

Name two languages which are used for client side scripting?

Answer: Javascript , VBscript

MISHI BRAVE
pdfelement

Remove Watermark Now

Question No: 29 (Marks: 2) What is

the purpose of MODEM ?

MISHIIBRAVE
pdfelement

Remove Watermark Now

Answer: It receive data analog signal from a phone line and then convert them into digital signal and send back to the computer with which it is attached. It also receives data from computer and convert it into analog signals.

Question No: 30 (Marks: 3) What is

Home Page of a web site?

Answer: For a web user it is a first page displayed when a user starts a web browser and for a web developer it is a first page when a user selects a site.

Question No: 31 (Marks: 5)

Why microprocessor uses the binary number system and not the decimal or any other number system?

Answer: Because this system is natural for digital computer. Digital computer have fundamental building blocks like ON & OFF Etc so it is natural to represent those in a number system that has only two symbols e.g Binary Numbers 0,1. Whereas decimal system is natural for human.

Question No: 32 (Marks: 5)

What is the difference between Interactive-mode and Batch- mode Application Software?

Answer: Batch-mode: This Mode Program has no user interaction with computer while a program is running e.g Paroll

MISHI BRAVE
pdfelement

Remove Watermark Now

Interactive-mode: The user runs the program on the computer and keeps interacting with the computer while a program is running e.g word processor
