(MAS All Rounder)

	E-learning is an educational approach that uses digital technologies to facilitate learning and teaching. It typically involves the use of online resources, such as websites, videos, audio, and interactive activities, to provide instruction and assessment. E-learning can be used in a variety of settings, including classrooms, corporate training, and distance learning.
Advantages	1. Increased Accessibility: E-learning provides teachers and students with access to educational materials and resources from anywhere in the world.
	2. Cost-Effective: E-learning is much more cost-effective than traditional classroom learning. It eliminates the need for physical classrooms, textbooks, and other resources.
	3. Flexibility: E-learning provides teachers and students with the flexibility to learn at their own pace and in their own time.
	4. Improved Engagement: E-learning allows teachers to create interactive learning experiences that engage students in the learning process.
	5. Automated Grading and Feedback: E-learning provides teachers with the ability to automate grading and feedback, saving them time and effort.
	6. Increased Collaboration: E-learning allows teachers and students to collaborate with each other in real time, allowing for more effective learning.
	7. Improved Retention: E-learning can help improve student retention by providing students with a more engaging learning experience.
	8. Scalability: E-learning allows teachers and institutions to easily scale their learning programs to meet the needs of an ever-changing student population.

Question 2. **(10 Marks)**

Differentiate between Internet, Intranet and Extranet. Also describe different ways to connect to internet.

Marks Division:
Difference between internet, intranet and extranet (6 marks)
Ways to connect to internet (4 marks)
SOLUTION:

Follow the following format:

Internet	**Intranet**	**Extranet**
The Internet is a global network of computers that enables users to share information and resources. It is an open network, meaning anyone with an internet connection can access it. The internet is used for a variety of purposes, such as sending and receiving emails, browsing websites, streaming videos, and downloading files. It is also used for research, communication, and collaboration.	An Intranet is a private network that is used by organizations to facilitate communication and collaboration among their employees. It is a closed network, meaning only certain people have access to it. It is used to share documents, files, and other information within the organization. It can also be used for communication, collaboration, and project management.	An Extranet is a private network that is used by organizations to facilitate communication and collaboration with their partners, customers, and suppliers. It is a closed network, meaning only certain people have access to it. It is used to share documents, files, and other information with external parties. It can also be used for communication, collaboration, and project management.
Ways to connect to internet		
1. Dial-up: This is one of the oldest methods of connecting to the internet. It uses a modem and a telephone line to connect to an internet service provider.	2. DSL: Digital Subscriber Line (DSL) uses a modem connected to a telephone line, but it transmits data at much higher speeds than a dial-up connection.	3. Cable: Cable internet uses a cable television line to provide high-speed internet access.
