Zoology Learning Group VV

(1) In insects Antena present in ___ region → Head
(2) Near base of the labium a tongue like Structure covered by bristle or hair → Hypopharynx
(3) Liney antena - like structure consiting one to Six segment and attach to maxilla is called → Maxillary palpus
(4) A pair of jaw present behind the labrum is called → Mandible
(5) The ___ are slight grooves on surface forming movable joints → Structure
(6) In insect Cuticle is present outside the Hypoderms
(7) Adult insect insects have ___ to ___ segments → 7 to 5
(8) Number of Ocelli in insect → 1-3
(9) The size of of ocelli is equal to the one facet of ___ eye → Compound eye.
(10) The compound eyes also called → Ocelli
(11) In adult insect, number of segment ~~thorax~~ region → 3
(12) The first lip is called ___ : → Labrum
(13) The hinder lip is called → Labium
(14) There are ___ segments in the abdomn of of adult insect → 3-11
(15) The ~~Crustacea~~ ___ are manily water inhabiting animals breath either by gill or through surface body → Crustacae

(16) ___ refer to large number legs possessed animals → millped.
(17) Arachind have segment body grouped in two sections → 2
(18) _____ attached to thorax cephalothorax. → 8
(19) In ___ there is no division of body into section → mities
(20) In insect the segment of body are grouped in sections → 3
(21) Pair of antennae is present → on head
(22) wings present in insect → 4
(23) In embryo, segment in head → 6 → 3 in thorax 11 or 12 in abdomen.
(24) The ocuticle harden after it production consist of lagely at least a nitrogenous substance is called → Chitin
(25) The joint lines divide the cuticula into areas called → plates or sclerites
(26) Its is innersurface formaming the roof of mouth is often called → epipharynx
(27) Thorax has segment → 3
(28) The first abdominal segment when seemingly more apart of thorax then abdumn is called → median segment or sapodeum
(29) In insect pair of legs → 3
(30) ___ use for capaturing → forelegs
(31) The jumping power of grass hopper due to → hind legs
compound eye called → ocelli

Near the base of labium on it inner side there is tongue like structure carved by bristles or hair called → Hypopharynx

(33) Behind each mandible at the side of mouth is the → Maxilla

(34) The ___ is the ventral portion of a segment of an arthropod → Sternum

(35) The front lib is called → Labrum

(36) The hinder lib is called → labium

(37) On ___ heads labrum is present above the mouth opening → hypogenthous

(38) which is of the following type of eye has group of tall pramid like structure → Compound eye

(39) The mandibles and ___ move sideway → Maxillae

(40) The ___ are slight grooves on the surface of forming movable joint → infolding
