EDU301 Quiz 3 File by Tanveer Online Academy

It will be easier for the children to ask essential questions through?	Integration
Which of the following is basic right mentioned by the Child's rights convention of 1989?	Education
Which one of the following is basically intuition?	Guessing
The stages of Piaget's cognitive development in the context of preschools are:	2
Integration makes the knowledge of one subject ---------- from that of another subject.	Inseparable
The brain is not complete at:	Birth
Who presented forms of integration?	Stoehr, Fogarty
Which of the following symbolizes the yellow hat in the De Bono's six thinking hats?	brightness and optimism
"Abstract thinking leads to reasoning with symbols" this refers which age level of Piaget's cognitive development:	Formal operational
We can remember those things which are connected with our --------.	prior learning
The average age for school-aged children is:	5 to 12 years
Which of the following signifies the white hat in the De Bono's six thinking hats?	information known or needed
Whom the following presented the term 'Six Thinking hats'"?	De Bono
Jumping is the example of	Gross motor

Which of the following symbolizes the red hat in the De Bono's six thinking hats?	**feelings**
A research was conducted and it was reported that teachers mostly focus on ------- of children	**left hemisphere**
Problem solving skills come with -------.	**Practice**
Questions in ----- also includes in essential questions.	**Induction**
According to Kolb (1984), Learning is a process of a combination of grasping and transforming:	**experience**
Which of the following should be made clear to the students.	**Essential questions**
In which books there is a lot of information than Japanese and German book?	**American**
Gross motor and fine motor development is involved in:	**physical development**
The process of planning, assessing and monitoring one's own thinking is called:	**Infusion**
Which of the following characteristics of critical thinking are presented by Wade (1995)?	**8**
In which year forms of integration were presented by Fogarty and Stoehr ?	**1995**
Children are very good ---------.	**problem solver**
In which of the following activity the children share their ideas with each other, so it also results in social development?	**Snack time & circle**
Which of the following integration takes advantage of natural combinations?	**Nested**
What are the student's achievement for us?	**Grades**
In which of the following language plays an important role?	**Cognitive development**
Which of the following generative topics actually make?	**Connections**
Research has now determined that remarkable changes occur in the brain during the ----- decade of life.	**Second**
Teaching is very exciting for ------- teachers without integration also.	**young**
In which of the following hemisphere logical thinking and verbal intelligence comes?	**Left**
It is common experience that poor children have more?	**problem solving skill**

Which of the following thing of students is assessed by paper pencil tests?	**Skills**
At which of the following level teacher should integrate two or three subjects so that we can save the time?	**Primary school**
how many different types of emotions a preschool child of 36 months can hold in his mind at the same time?	**2**
Core concepts are of which kind of knowledge.?	**Declarative**
Learning is a permanent change in:	**behaviour**
Life time learning is	**Curriculum**
Who gave this statement: "Having a critical spirit is as important as thinking critically"?	**Norris**
Which one is a structured and systematic form of learning?	**Formal**
Different countries use different names for pre-schooling, but the umbrella term for it is:	**Early Childhood Education**
Teachers mostly concern about.	**complition of syllabus**
According to research teachers mostly focus on which of the following hemisphere?	**Left**
Fragmentation is at which level of integration?	**Primary**
Which of the following symbolizes the blue hat in the De Bono's six thinking hats?	**Thinking process**
Remarkable changes occur in the brain during which decade of life?	**Second**
Life is not divided into little blocks of?	**Subjects**
Which of the following love integrated curriculum because it provides the context for learning?	**Children**
In United States, pre-schooling is named as:	**Kindergarten**
Which of the following skill's development is very important in preschool or early childhood education?	**Gross motor**
Core concepts are central to which domain ?	**Knowledge**

Which of the following age level the brain develops very fast?	**First year**
"Child is a natural discoverer" who gave this statement?	**Bruner**
How many chunks of information a learner can learn at a time?	**5-9**
"Relationship with friends" This example refers to which of the following skill?	**Social**
Who said that, Child has the capacity to learn and transmit that knowledge to others. Child is a natural discoverer?	**Bruner**
In primary school, how many subjects should teachers integrate in order to save time?	**Two to three**
What is an example of essential question?	**Who is a friend?**
Which of the following curriculum combines disciplines in a synergistic manner that makes the knowledge of one subject inseparable from that of another subject?	**Integrated**
According to Piaget's cognitive development, when does the preoperational stage begin?	**2 to 7 years**
Generative topics are generated from which of the following source?	**Learnt Information**
Which integration focuses on meta-curricular approach and enlarges big ideas?	**Threaded**
Which of the following is a dead thing and teachers give life to it?	**Curriculum**
Essential questions are based on which of the following approach?	**Induction**
Which kind of knowledge is involved in the Core concepts?	**Declarative**
Which of the following does NOT belong to the life skill?	**Disbelief**
When did the Child Rights Convention provide the mentioned statement, "Education is basic right of every child"?	**1989**
Who of the following are responsible for planning, conducting and evaluating their own efforts?	**Learners**
Whose sayings are these, "Learning is a process of a combination of grasping experience and transforming it."	**Kolb**
What is the name of preschool education in British English?	**Nursery**

How long does it take a Leaner to process only one new idea or concept?	**10 second**
What is the highest level of learning?	**Abstraction**
Which of the following curriculum use a thematic approach to integrate subject matter?	**Webbed**
Whose sayings are these, "There is no such profession where knowledge is separable from doing or practice"?	**John Dewey**
"Jumping" is an example of which of the following skill?	**Gross motor**
What is the purpose of teaching social studies to students?	**Values**
Which of the following complicates and expands the teacher's work?	**Inquiry learning**
Which education has different developmental milestones than pre-school education?	**Formal**
Which of the following is a process associated with inquiry method?	**observation**
In which topic can you generate new information based on what you just learned?	**Generative**
Which of the following contexts cannot be separated from development?	**Social**
What is the best form of structured, systematic learning?	**Formal**
What is the name of preschool education in the United States?	**Pre-K**
Who said that, "The textbook is not a moral contract that teachers are obliged to teach teachers are obliged to teach [students]"?	**John Adams**
Who is considered as an important person in the application of the curriculum?	**Teachers**
In which of the following class does a child get a basic education?	**Primary**
Which of the following complicates and expands the teacher's work?	**Inquiry learning**
All of the following skills are related to the cognitive development EXCEPT:	**Writing**

Unit questions are based on which of the following approach?	**Deduction**
Which age group has the fastest brain development?	**First-year after birth**
Which of the following curriculum creates a disturbance in the classroom?	**Crowded**
What Piaget stage of cognition development is marked by the rapid growth of language?	**Preoperational**
In which of the following pictures and model are not sufficient ways of learning?	**pre schools**
What is the only stage of Piaget's cognitive development that our Pakistani schools focus on?	**Preoperational**
Who has provided the Six Thinking hats?	**De Bono**
According to Kolb (1984), which of the following is a process of combination of grasping experience and transforming it?	**Learning**
In which of the following decade of life does the human brain undergo a remarkable change?	**2nd**
All of the following are examples of generative topics EXCEPT:	**My dream**
Which of the following development includes gross and fine motor skills?	**Physical**

Which of the following integration method overlaps concepts as organizer? Shared

Teaching is very exciting for ------- teachers without integration also. Young

The brain thrives on -------. Connections

Which of the following for information is important? Depth

Which one of the following educations is different from other education? Pre-school

Which of the following can construct their own knowledge through different social activities? Children

The stages of Piaget's cognitive development in the context of preschools are: 4

We do not teach interpersonal skills in -----. Schools

Which of the following love integrated curriculum because it provides the context for learning? Children

The theory which is very much applicable in early childhood education is: Vygotsky's

Which of the following have no obvious right answer? Essential questions

"Abstract thinking leads to reasoning with symbols" this refers which age level of Piaget's cognitive development: Formal operational

Which of the following are based on induction? Essential questions

Integration makes the knowledge of one subject ---------- from that of another subject. Inseparable

Who love integrated curriculum? Students

In British English, pre-schooling is known as: Nursery

Jumping is the example of: Gross motor

Integration means putting things? Together

Brain development continues till the age of: 8 years

Teachers want to cover the syllabus but also want to teach in? Depth

how many different types of emotions a preschool child of 36 months can hold in his mind at the same time? 2

At which of the following level teacher should integrate two or three subjects so that we can save the time? Primary school

Which of the following type of integration is related to shared integration? Sequenced

If we will use the connections our efficiency of doing any task will -------. Increase

On which of the following our teachers do not focus? core concepts

Remarkable changes occur in the brain during which decade of life? Second

What kind of thinking essential questions require? Divergent

In United States, pre-schooling is named as: Pre-School

Who are most important persons in the application of curriculum? Teachers

Which of the following for information is important? Depth

Which of the following is a very good approach to know problem solving? Case method

By which skills we need to integrate the knowledge? Practical

Our teachers do not focus on: core concepts

Research has now determined that remarkable changes occur in the brain during the ---- decade of life. Second

Which type of curriculum is a great gift to experienced teachers? Integrated

Which of the following do not have attention span? Children

Which of the following skill's development is very important in preschool or early childhood education? Gross Motor

How old a child has the vocabulary of 2000 words? 4 years

Which of the following activity needs to be an integral part of early years of education? Story time

Form 3 focuses on the integration of subject knowledge with? students' interest

In our Pakistani schools which of the following stage of Piaget's cognitive development we focus on:

Preoperational

Learning depends upon the: Environment

Fragmentation is at which level of integration? Primary

How many major ideas are included in Vygotsky's theory? 4

At which second, learner can process only about one new idea or concept? 10

Children can come up with different ideas and teachers must? Accept

A time of profound brain growth is? Adolescence

Who presented forms of integration? Stoehr, Fogarty

The average age for school-aged children is: 6 to 12 years

Between which of the following networked integration is created? Learners

In which books there is a lot of information than Japanese and German book? American

In school we do not have much time to deliver information so we must know the -------. core concepts

Core concepts are central to which domain? Knowledge

Which of the following should be made clear to the students? Core concepts

In which of the following activity the children share their ideas with each other, so it also results in social development? Snack time & circle

Questions in ----- also includes in essential questions. Induction

In what kind of thinking the idea in thinking is that no idea is a stupid idea? Divergent

Our assumptions and beliefs are: Big ideas

Through integration, the teaching of experienced teachers has become? exciting

The average weight gain of 6-12 years children in a year is: 5 to 7 pounds

Who always identify their intent? Teachers

All children in their personality are: Unique

The important thing in ----- is what we know we must share it with others. problem solving method

We can remember those things which are connected with ours --------. prior learning

By which of the following age level a child has TWICE as many brain connections as an adult? Three

Which one is a structured and systematic form of learning? Formal

What will be easier to ask because of integration? essential questions

In which year forms of integration were presented by Fogarty and Stoehr? 1995

Which of the following integration is created among group of students? Networked

The average height growth of 6-12 years children in a year: 2.5 inches

"Child is a natural discoverer" who gave this statement. Bruner

From which of the following teachers get little assistance? Textbook publishers

Which of the following are related to the lives of people? Essential questions

Which of the following age level the brain develops very fast? Second year

Gross motor and fine motor development is involved in: physical development

Which one of the following factor that cannot be separated from in which it occurs? Social

Different countries use different names for pre-schooling, but the umbrella term for it is: Early Childhood Education

Developmental milestones of pre-school education are different from those of ----------. Formal education

Which of the following generative topics actually make? Connections

Teachers designed assignments to facilitate the --------. learning process

We make the groups of the students of? same interest

It is common experience that poor children have more? problem solving skill

Which of the following is basic right mentioned by the Child's rights convention of 1989? Education

Children are very good ---------. problem solver

The stages of Piaget's cognitive development are: 4

At new level which thing is most important about core concepts? Application

In which of the following stage of Bruner's theory child can think abstractly?	**symbolic**
In -------- pictures and model are not sufficient way of learning.	**pre schools**
Which of the following symbolizes the yellow hat in the De Bono's six thinking hats?	**brightness and optimism**
Which of the following inquiry may involve along with procedure and solution?	**Problem**
According to Kolb (1984), which of the following is a process of combination of grasping experience and transforming it?	**Learning**
The most important part of integration is -----.	**Assessment**
According to Kolb (1984), Learning is a process of a combination of grasping and transforming:	**Experience**
Whom the following presented the term 'Six Thinking hats'"?	**De Bono**
In which of the following stage of Bruner's theory stage child can think abstractly?	**Symbolic**
Bruner's final stage is -------.	**Symbolic**
Which of the following did not clearly divide these stages of his theory and kept them merged?	**Bruner**
Which of the following must be considered relative or tentative, not final?	**Conclusions**
The solutions, alternatives or responses provided by learners are not found in:	**textbooks**
Which of the following is final stage of Bruner's theory?	**Symbolic**
Bruner's work was very much influenced by	**Piaget**
Which of the following is first stage of Bruner's theory?	**enactive**
Which of the following characteristics of critical thinking are presented by Wade (1995)?	**Eight**
Which of the following symbolizes the red hat in the De Bono's six thinking hats?	**Feelings**
Which of the following signifies the white hat in the De Bono's six thinking hats?	**Information known or needed**
Which of the following symbolizes the black hat in the De Bono's six thinking hats?	**Judgement**

In which of the following pictures and model are not sufficient ways of learning?	**Pre schools**
In which of the following inquiry, students investigate topic-related questions that are student formulated through student designed/selected procedures?	**Unguided**
Learning is a permanent change in:	**Behaviour**
For whom of the following the term andragogy is used for?	**Adults**
Which of the following includes drawing conclusions based on observations?	**Inferring**
Whom of the following said that "critical thinking has two important dimensions?"	**Beyer**
Which of the following is second stage of Bruner's theory?	**Iconic**
Which of the following thinking is a disciplined manner of thought that a person uses to assess the validity of something?	**Critical**
In which of the following stage of Bruner's theory child makes relationships with concrete objects and learns from them?	**Enactive**
Which of the following objective is often process and in some instances, the end product?	**Inquiry teaching**

EDU301 Quiz 4 File by Tanveer Online Academy

---------- motivation refers to behavior that is driven by external rewards. Extrinsic

Which type of knowledge in direct instruction can be assessed through paper and pencil? Declarative

--------- reinforcement occurs when something already present is removed (taken away) as a result of a person's behaviour, creating a favorable outcome for that person. Negative

Which of the following systems are oriented to the group as well as the individual? Reward

Which of the following skills are required for students to participate effectively in a group? Group

Daily drill of anything is: distributed practice

Which methods is frequently used in research? Scientific

Group learning develops ideas as well as: social skills

Rubrics are known as instruments that are used to: access skills

--------- is a teacher-centered method. Presentation

Knowledge can be assessed through: Written tests

Syntax of cooperative learning includes how many phases? 6

During classroom discussion method which one of the following response teacher must give before moving on to next students or question? Feedback

To improve student thinking, promote involvement and engagement in academic material are the primary instructional goals of which of the following method? classroom discussion

In which of the following learning students try to clarify the problem? Problem based

A _____ is any consequence that increases the frequency of a particular behavior, whether other people find that consequence pleasant or not. Reinforce

How many categories did Abraham Maslow believe that needs could be classified into? 5

When two students share their views with each other and then they share it with the whole class, this activity called: Think-pair-share

For conducting direct instruction feedback should be: constructive and appropriate

What is the difference between lecture and direct instruction? lecture only gives declarative knowledge

The last level of Maslow's hierarchy of needs is ----------. self-actualization

To grade both team and individual efforts is a big challenge in which of the following instructional method? cooperative learning

'Making a classroom cookbook' is an example of which one of the following types of learning? Project

Discovery learning is a method which employs spirit of ---------. Discovery

In which of the following type of discussion teacher talk time is more than 50% of students talk time? Recitation

How many parts does jigsaw technique have? Two

A tool which can be used to measure students' problem-solving potential as well as group work: Performance assessment

Crossword puzzles is an example of ---------- learning. Incidental

The base level of Maslow's Hierarchy of Needs is ---------. Physiological

In direct instruction who are in passive role? Students

Management tasks unique to cooperative learning help students make the transition from whole class to: cooperative learning groups

In cooperative learning, for completing a task teacher to the students must communicate about which one of the following factors? budgeted time

In which of the following phase of cooperative learning teacher tells the students what are they going to achieve? clarify the goals

The base level of Maslow's Hierarchy of Needs is ---------. Psychological

Dialogic discussion promotes which one of the following types of thinking? Divergent

Which one of the following is very useful learner centered teaching and learning strategy? Problem solving

Task, goal and participation structures are the types of ----------. classroom structures

According to research, learner, or groups of learners to be immersed to work towards one common goal if projects are properly: Structured

Equalizes participation is the task of: Gatekeeper

Which of the following skill cooperative learning method helps students to develop? Communication

In classroom discussion how teachers can obtain better classroom discourse? giving themselves and their students opportunities to think before they respond

Project Based Learning is an instructional approach built upon authentic learning activities that engage students': interest and motivation

Project Based Learning is synonymous with learning in depth. A well-designed project provokes students to encounter which of the following aspects? concepts and principles of a discipline

A cooperative learning approach STAD was developed by: Robert Slavin and his colleague

In project based learning allows which one of the following to reflect upon their own ideas and opinions? Students

The Learning method in which more than one person work together is called: Cooperative

Project Based Learning teaches students 21st century skills as well as: Content

---------- needs are the physical requirements for human survival. Physiological

Cooperative learning should have cooperative tasks, cooperative goals and cooperative: Rewards

In which of the following phase holding for classroom discussion teacher tells the students to reflect what they have learnt through this process? debriefing

Which one of the following methods is the example of discussion method? Socratic

Every theory is based on: research

Children produce their original work after: problem based learning

How many types of discussion are? 2

In project learning, students work in: Groups

Students' collaborative skills can be assessed through a: rubric

Presentation is a --------- centered method. Teacher

Recitation is also known as:

monologic discourse

What are the four specific interpersonal communication skills that can enhance the quality of classroom discourse and students' regard for each other? paraphrasing, behavior description, feeling description and impression checking

Which of the following percent of the researches says that cooperative learning helps in the academic achievement of the student? 80%

In which of the following learning the focus is on ultimate outcome and product? Project

Cooperative learning should have cooperative tasks, cooperative rewards and cooperative: Goals

If the child that is not reached to the level of automation it means that we are not using which one of the following methods? direct instruction properly

In project learning most teachers assume that individual performance is: Hidden

In direct instruction who are in passive role? Students

The classroom is just like a laboratory is said by: John Dewey

Students' collaborative skills can be assessed through a: rubric

The action of traveling in or through an unfamiliar area in order to learn about it is called ---------. Exploration

Which of the following skills are required for students to participate effectively in a group? Group

Under the task-oriented roles which one of the following best refers to help members with lesson content? Coach

In cooperative learning, for completing a task teacher to the students must communicate about which one of the following factors? budgeted time

Syntax of cooperative learning includes how many phases? 6

Which of the following option is NOT appropriate for cooperative learning? Punishment

Which of the following sort of laboratory the classroom is? Learning

Presentation is a --------- centered method. Teacher

Which of the following model requires student cooperation and interdependence in its task, goal and reward structure? Cooperative learning

In classroom discussion there is a lot of opportunity for which one of the following aspect? Paraphrasing

Curious observation is the start of the: Inductive process

Which of the following factors are much important in scientific method? Variables

What is the most important thing in thinking skills? wait time

For learning activities, ---------- centered learning methods must be preferred. Student

Which one of the following was originally called the experimental method? scientific method

Which methods is frequently used in research? Scientific

Which of the following years Piaget actually spent to work on constructivism? 50 years

What is the difference between lecture and direct instruction? lecture only gives declarative knowledge

Teacher needs to point them out if which of the following, exist in the student's logics or inferences? Errors

To grade both team and individual efforts is a big challenge in which of the following instructional method? cooperative learning

Roots of problem-based learning are in: Dialogue

Cooperative learning model changes which one of the following systems? Reward

In cooperative learning which of the following skill is not easy to assess? Social

Number heads together is an approach developed by: Spencer Kagan

Learners progress from specific observations to: Generalization

Which one of the following best require by cooperative learning to a unique set of rather difficult management tasks? Attention

For student assessment, which one of the following structures should be individualistic as well as group oriented? Reward

Students make generalizations that are too: broad

How much citations related to cooperative learning are listed in the online ERIC service? 3000

Vygotsky was a Russian: Psychologist

In which of the following method we move from specific to general? Inductive

Discovery learning is a ---------- centered method. Learner

If the child that is not reached to the level of automation it means that we are not using which one of the following methods? direct instruction properly

In problem base learning the focus is on: Process

Who has invented the bulb? Edison

Learners progress from which of the following, observations to inference or generalizations in GII? Specific

Product focus projects are those which provide which of the following factor at the end? Product

Which type of groups are spirit of cooperative learning? Heterogeneous

'To study a phenomenon' is an example of which of the following projects? Research

In direct instruction which of the following model is used under the domain of direct instruction? task analysis

In which of the following learning the focus is on ultimate outcome and product? Project

During classroom discussion method which one of the following response teacher must give before moving on to next students or question? feedback

Assigning different roles is a good thing in which of the following technique? Jigsaw

Roots of the assessment of all social sciences is based on: Scientific Method

In problem base learning the focus is on: Process

How many types of rubrics are used to access student skill development? Two

In cooperative lessons, in order to master learning goal students usually work in: Teams

In which of the following type of test items can be scored soon after? Objective

--------- is a teacher-centered method. Presentation

Which one of the following best require by direct instruction lessons? Management

Which one of the following best refers to recitation? teacher centered

Teachers must provide the students with opportunities to --------- things. Discover

How many types of discussion are? 3

In project learning, students work in: Groups

Which one of the following discussion types is known as teacher-centered discussion? Monologic

In cooperative lessons, which of the following systems are oriented to the group as well as the individual? reward systems

What is the biggest limitation of cooperative learning? Mindset

The inquiry learning cannot be done in: Rushed

Sometimes people tend to use word ---------- learning for activity based learning. Discovery

For classroom discussion, what should be directive to the whole class? Question

Which of the following goal structure occurs when students perceive that they can obtain their goal if, and only if, the other students with whom they work also obtain their goals? Cooperative

Learning method on which we move from general to specific is called: Deductive

What Aristotle talks about? Logics

Scientific method can also be used in: social sciences

STAD (Student Team Achievement Division) is which type of learning classroom technique: Cooperative

Which of the following can be assessed through direct observation? Skills

Which one of the following options best refers to wait time? Thinking

In which of the following phase holding for classroom discussion teacher tells the students to reflect what they have learnt through this process? Debriefing

Adventure projects may last for: Weeks

Which of the following is not a technique of inquiry? Hypothetical

Which of the following is the important thing in inquiry? Evidence

In which of the following inquiry, teachers role is minimized? Unguided

A ---------- learning environment is a setting for learning that includes a controlled and often simplified copy of a real world system to be studied. simulation-based

The focus of project learning is: Product

Automation is the example of: overlearning

Children produce their original work after: problem based learning

The syntax of discovery learning includes ---------- steps. 9

---------- learning is a learner-centered method. Discovery

In which of the following inquiry, students investigate a teacher-presented question? Guided

Which one of the following best define a way to present certain behavior and learning? Modeling

'Making a classroom cookbook' is an example of which one of the following types of learning? Project

A cooperative learning approach STAD was developed by: Robert Slavin and his colleague

The action of traveling in or through an unfamiliar area in order to learn about it is called ---------. Exploration

Teachers can obtain better classroom discourse by giving their students opportunities to think before they: respond

Teachers must be careful about their reward structure in which of the following method? cooperative learning

Students should be assessed both in a group form and on individual basis. For this purpose, teacher may do how many evaluations for students? Two

Which of the following can be falsified in scientific method? Theory

How many parts does jigsaw technique have? Two

A tool which can be used to measure students' problem-solving potential as well as group work: Performance assessment

Which of the following consists of two or more concepts? Generalization

Inquiry is not only related with: questioning

How many types of discussion are? Two

Which one of the following is an educated guess about the relationship between the independent and dependent variables? Hypothesis

Which one of the following best refers to direct instruction? student centered

For student assessment, which one of the following structures should be individualistic as well as group oriented? Reward

To improve student thinking, promote involvement and engagement in academic material are the primary instructional goals of which of the following method? Classroom Discussion

Recitation is also known as: monologic discourse

In which of the following century the word scientific was devised? 19

Crossword puzzles is an example of ---------- learning. Incidental

Which of the following goal structure occurs when achievement of the goal by one student is unrelated to the achievement of the goal by other students? Individualistic

Aristotle was one of the pioneers, he talked about: Logics

Which of the following cannot be inquiry learning? Rushed

In cooperative learning, which of the following is oriented to the group as well as the individual? Reward system

Knowledge can be assessed through: Written tests

Usually problem base learning is done on: Groups

Who of the following plays the key role in asking questions, during guided inductive inquiry? Teacher

The Learning method in which more than one person work together is called: Cooperative

Which one of the following is very useful learner centered teaching and learning strategy? Problem solving

Students work in teams in order to master learning: Goal

According to research, learner, or groups of learners to be immersed to work towards one common goal if projects are properly: Structured

In project learning when it is important for a teacher to consider students' developmental level? designing projects

Project Based Learning teaches students 21st century skills as well as: content

In project learning, performance is assessed on: individual basis

"Collecting data" is which of the following step of Guided Inductive Inquiry? 3rd

Which one of the following methods is the example of discussion method? Socratic

Daily drill of anything is: distributed practice

Group learning develops ideas as well as: social skills

Which of the following percent of the researches says that cooperative learning helps in the academic achievement of the student? 80%

In which of the following type of discussion teacher talk time is more than 50% of students talk time? Recitation

In project learning most teachers assume that individual performance is: hidden

Cooperative learning should have cooperative tasks, cooperative goals and cooperative: Reward

A cooperative learning strategy in which a picture is divided into many small pieces and students are asked to join these pieces and make the picture again this called: jigsaw puzzle

He talked about logics and he was one of the pioneers named: Aristotle

Exploratory projects are those in which the students try to: explore

Group learning will be more efficient for developing the: Ideas

Work on scientific method was started by: Aristotle

Rubrics are known as instruments that are used to: access skills

Management tasks unique to cooperative learning help students make the transition from whole class to: cooperative learning groups

What is the primary goal of cooperative learning? social skill development

In 1994 roles that have been adapted by Arends are: Task oriented and Process oriented

The other name for presentation method is ----------. Lecture method

Problem based learning starts from: Questions

---------- are done in the virtual environments and are computer based. Simulations

Who used the word discourse for discussion method? Researchers

Lecture only gives which one of the following type of knowledge? Declarative

---------- is the taking away of an appetitive stimulus to decrease a certain behavior. Negative punishment Kagan (1994) roles have been adapted by: Arends

The ordered arrangement, from bottom to top, of Maslow's Hierarchy of Needs is -------- Physiological, safety, belongingness, esteem, self-actualization

Which of the following learning has its intellectual roots in the Socratic Method? Problem based

U-shaped seating arrangements facilitate which one of the following? classroom discussion

In cooperative lessons, teams are made up of: all achievers

Which of the following discussion is also called as interactive discussion?

Dialogic
