An increase in overall body size with changes in muscle, bone and fat is called:	Growth
Human development is based on certain principles. Which of the following is not a principle of human development?	Reversible
"Development is individualized process. Although the pattern of development is similar for all children, they follow the pattern at their own rate" is:	The principle of uniqueness
"The human being is never static" comes under the elaboration of which principle?	Development involves change
Development proceeds from the center of the body outward. This is the principle of: Cephalocaudal Scaffolding Proximodistal Mental Growth	
In the child's life, there may be a break in the continuity of growth due to:	Illness and Starvation
All are the factors that influence human development EXCEPT:	Reversibility
Which influence is very important during adolescence?	Peer group
What denote the changes in behavior due to training and experiences?	Learning
Which of following term is more broad and comprehensive and refers to overall changes in the individual?	Development
What refers to the sequential characteristic of biological growth and development?	Maturation
Which type of coordination is inefficient in the old people?	Muscle-motor
"Development occurs in orderly manner and follows a certain sequences" is the principle that:	Development follows a pattern
Maturation is the inner growth process which is unaffected by:	Training
There are _____ aspects of human development which are discussed in this course.	4
Development begins with:	Conception
What refer to change in a developed organism due to the unfolding ripening of abilities, characteristics, traits and potentialities present at birth?	Maturation
Which aspect of development deals with the changes in the way an individual becomes capable of understanding, expressing and controlling personal feelings?	Emotional Development
