"Sta 630"

(1) The direct personal involvement of a field researcher in the social lives of the other people raise many ethical dilemmas. What are major ethical dilemmas researcher may encounter.

(2) Most of the researchers use table in their research work as it is an effective way for data presentation. What is the imp parts of table.

(3) It is observed that internal validity of lab experiment is high whereas external validity is low. Reason.

(4) During a survey interview, personal & situational bias can be introduced be interviewer & interviewee. How can interviewer be reduced in a interview.

(5) Quota Sampling.

(6) A researcher observes customer purchase behaviour in a shopping mall without interacting with customer. Identify.

(7) Ex-post facto is preferred over one shot case study

(8) During an interview researcher asked questions who is working for 15 years in organization.

'Sta 630" (2)

(9) Types of sampling.

14.9.20

(10)
• How historic-comparative research is similar to field research? provide minimum two sound arguments.

(11)
• 'Editing is not coding'. Highlight the key differences b/w coding & editing with the help of example.

(12)
• — Maturation effect & testing effect are important factors that can affect internal validity of an experiment. Highlight the key difference b/w maturation effect & testing effect.

(13)
• — While choosing a sample for a large scale study, it is recommended not to select same respondents that were a part of pilot testing rather select similar group of respondents. Why is it recommended not to select the same group of respondents that participated in pilot testing

(14)
• — One of the most commonly used non-probability sampling techniques is convenience sampling technique. What do you understand by it? Justify with the help of an example.

"Sta 630"

(15) A researcher wants to thoroughly investigate the cultural differences & similarities in Pakistan & India starting from 1947 till now. Identify & explain the research method for this kind of research.

*(repeated)

(16) Explain the importance of statistical software (like MINITAB & SPSS etc) for data presentation in research. Explain with the help of examples.

(17) Explain the difference b/w internal validity & external validity of an experiment.

(18) A researcher has asked following questions from the respondent through a questionnaire on a five-point scale ranging from strongly disagree (1) to strongly agree (5).
"Govt. should make proper arrangements for increasing literacy rate"

(4)

'Sta 630'

(19) A researcher wants to study the impact of 'knowledge management' on employee performance. He wants to take data from the organizations located in each provincial capital of Pakistan. For this purpose, he at first develops an accurate sampling frame of each group (based on provincial city) & then choose respondents on the basis of simple random sampling.

(a)-- Identify the type of sampling (probability or Non-probability) & sampling technique. Justify your choice.

(20) limitations of trivariate tables

(21) Startified random Sampling

(22) Sampling terminology

(23) Statical control

(24) Interview bias

(25) Mean, Median, Mode

(25) "Sta 630"

(26) Content analysis, reactive or non-reactive

(27) Unit analysis & Unit observation (explanation)

(28) A researcher gathered 39 statement from research from 15 were negative, if researcher wants to change the negative statement

(29) Stapping activities of Pilot testing

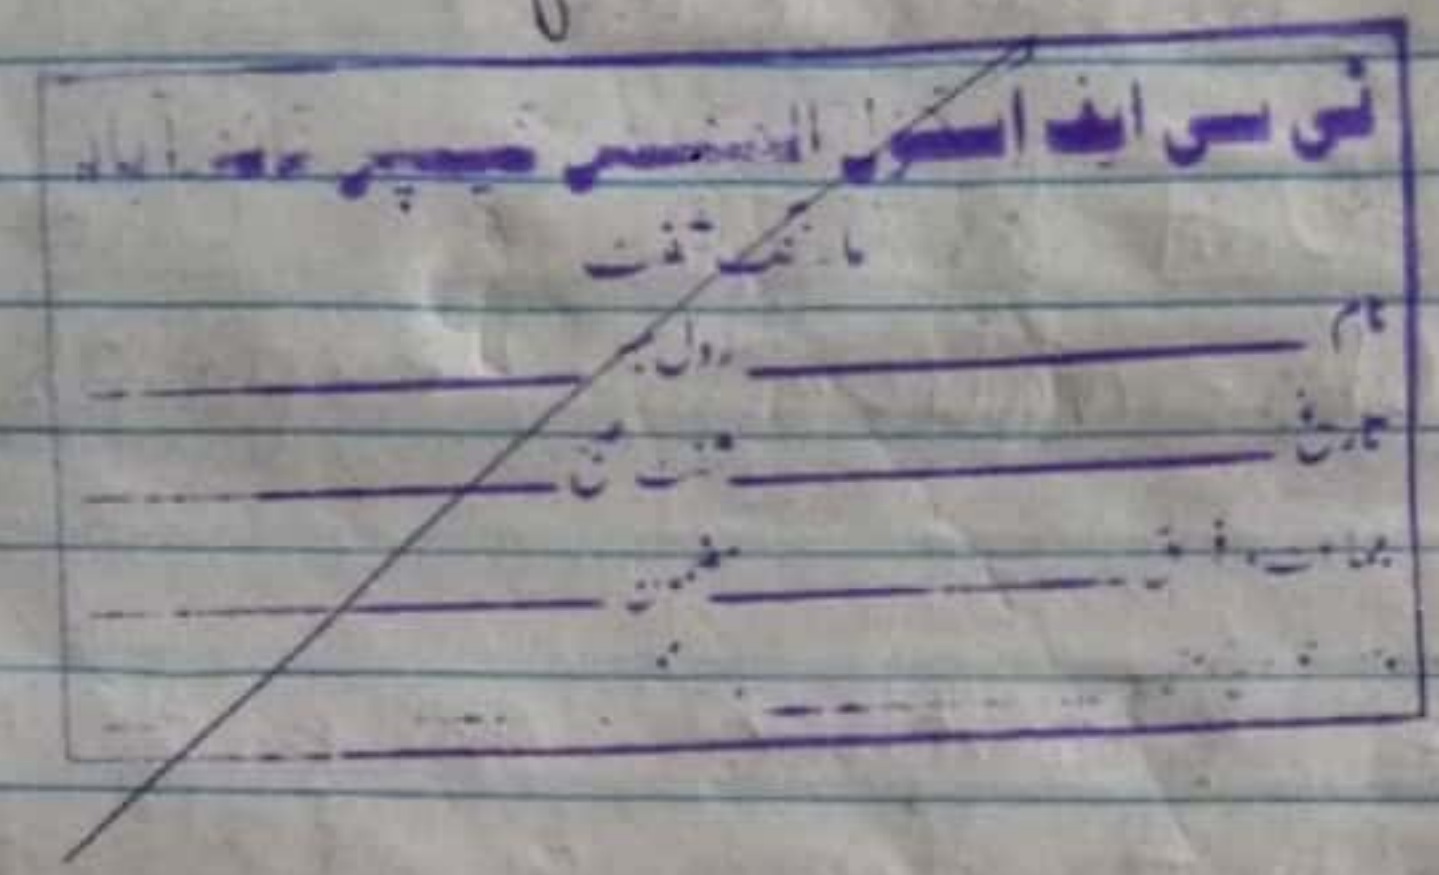

(30) Difference between purposive & Sequencing technique.

(31) A researcher wants to compare performance of different companies by analysing their annual report. What kind of non-reactive research, researcher is intend to do?

(32) The key difference b/w survey interview & field interview is the standard of questions. Why the standard of questions remain the same in survey interview, while in field interview (ethnographic research) it changes?

- HCR (Historical Comparative research) -- Most imp

(6) - Probing

(33) Researchers use tables in their research as it is effective way of data presentation What are important parts of table.

(34) What do you understand by funnel technique? Explain in your own words?

(35) Differentiate b/w parameter & statistic.

(36) Keeping in mind the basics of field research, highlight some of major duties of a field researcher.

~~(37) Explain the~~

(37) Is it possible to control "maturation" effects in experimental design? Why or why not.

imp :- Criteria for sampling technique :-

(38) Why is pilot testing more important before actually starting questionnaire survey?

(39) Describe diff. b/w simple random & systemic random sampling.

(40) Pre-test & post-test

(41) In which situation researcher can select historic comparative research.

(42) How to overcome interview bias.

(43) key purposive b/w purposive & sequential sampling.

(44) Disadv. of content analysis.

(45) How Eliminate selection bias during experiment.

(46) Limitations of trivariate tables: Explain any two.

(8) Sta 630

(47) What do you mean by double barreled questions? Give Examples.

(48) What are steps of field research. Only names.

(49) Identify Types of Sampling.

(50) Write dillemas of field research.

(51) What are the consequences if the interview is not properly terminate.

(52) In a study researcher observe one group & measure the variable before & after changes. What type of quasi experimental design it is & how.

(53) Explain the specification pattern with the help of example.

(54) The researchers wants to study the crisis team management cell. scenario

(4) (4) . 5 to 630'

base question. Identify Unit of analysis & unit of observation

(55) Uni-directional ideology.

(56) Suggestions for accuracy of interview.

(57) Difference blw ethnography & ethno-methodology.

(58) Validity

(a) Central tendency

(b) Sampling measures

(61) Exclusive & Enhartic

(62) What are filtered questions.

(62) Disadvantages of secondary data.

(63) Explain Editing
