2018

Bt405 nanobiotechnology

1. What is nanocoating.
 2. What is sensor.
 3. What are the two types of glucose detection biosensor.
 4. Applications of nanocoating.
 5. Describe in detail siRNA drug delivery system.
 6. Describe in detail microarray.
 7. Applications of carbon nanotubes.
 8. Components of biosensor.
 9. Features/criteria to choose sensor.
 10. Applications of biosensor.
- Bt405 final term paper 2018

40 mcq

- 1- human hair diameter(50 to 100 microns)
- 2- physicist discover x- ray (roentgen)
- 3- world population need to feed (9.1 billion)
- 4- human cell contains (1 trillion)
- 5- optical biosensor (definition)
- 6- materials where a polymer is filled(polymer composite)
- 7- which is not the characteristic of biosensor
- 8- specific analyte of interest to produce an effect (transducer)
- 9- redox reaction (physiological electron acceptor)
- 10- not an imaging test technique
- 11- nanotechnology (at nanoscale)
- 12- which is not the advantage of nanotechnology in medicine

Subjective

- 1- polymeric nanocomposite
- 2- Degenerative diseases
- 3- applications of nanocoating
- 4- applications of biosensors
- 5- detail note on microarray
- 6- application of carbon nanotubes
- 7-features to choose sensor
- 8-bioreceptor (2)
- 9- biosensor classification based on transducer
- 10- Define amperometric biosensor, blood glucose biosensor, potentiometric biosensor, Dna biosensor and calorimeter biosensor (10)

2017

Bt405

What is biochip 2

Properties of ceramics and glass 3

Features of sensors 3

Application of biosensor in environment 3

Detail on bioreceptors 5

Explain self adhesive and why diatoms are good model for biomimetic membrane 5

What is spectroscopy and write X-ray method in detail 5

Detail on application of biosensors 10

BT405

Quantum Continent

Role of Nanotechnology in Diagnostics

Nano particles as elements in Biosensors

Five uses of nanotechnology in daily life

Spectroscopy and X-ray

siRNA Drug Delivery System

Types of Glucose Biosensors

Optical Microscope and its resolution power

Microarray

Application of Biosensors
