ENG505_Glossary

1. **Acculturation** :The process of adapting to a new culture. This involves understanding different systems of thought, beliefs, emotions, and communication systems. Acculturation is an important concept for understanding SLA, since successful learning is more likely when learners succeed in acculturating.
2. **Accuracy** :The use of correct forms of grammar, vocabulary, spelling and pronunciation. In an accuracy activity, teachers and learners typically focus on using and producing language correctly.
3. **Acquisition** :Language acquisition is the process by which humans acquire the capacity to perceive and comprehend language, as well as to produce and use words and sentences to communicate.
4. **Action research :**Corey (1953) defined action research as the process through which practitioners study their own practice to solve their personal practical problems.
5. **Activity-based learning** :A way of learning by doing activities. The rules of language used in the activity are looked at either after the activity or not at all.
6. **Affective Filter** :Affective Filter is the term Stephen Krashen has used to refer to the complex of negative emotional and motivational factors that may interfere with the reception and processing of comprehensible input. Such factors include: anxiety, self consciousness, boredom, annoyance, alienation, and so forth.
7. **Affective needs** :They are the needs of a learner that relate to expression of his or her feelings and/or emotions. They impact on aspects such as motivation to learn a language, learners' willingness to engage in learning activities etc. These include the need to feel at ease, the need to express one's own ideas and emotions, the need for self-fulfillment, etc.

By ASFAND YARR

ENG505_Glossary

8. **Aids** :Aids are the things that a teacher uses in a class, e.g. handouts, pictures, flashcards. When teachers plan lessons they think about what aids they will need. See also visual aid. Aids to teaching include (a) Visual: Blackboard, whiteboard, overhead projector, posters, wall charts, flip-charts, maps, plans, flashcards, word cards, and puppets. (b) Electronic: Tape recorder, TV or video player, computer, CD Rom, language laboratory.
9. **Aim** :What the teacher wants to achieve in the lesson or in the course. The main aim is the most important aim, e.g. the teacher's main aim in a lesson could be to teach the present perfect or develop listening skills. A stage aim is the aim or purpose of a stage, step or short section of a lesson, e.g. 'to provide controlled practice of the present perfect or to develop listening for gist'. A subsidiary aim is the secondary focus of the lesson, less important than the main aim. It could be the language or skills learners must be able to use in order to achieve the main aim of the lesson or a skill or language area which is practiced while focusing on the main aim. A personal aim is what the teacher would like to improve in his/her teaching, e.g. 'to reduce the time I spend writing on the whiteboard'.
10. **Approach** :It is a theory about the nature of language and how languages are learned. It is usually manifested through sets of principles which guide the choice of teaching procedures. Examples are 'the communicative approach' and 'task-based learning'.
11. **Arbitrary symbols** :One of the central 'design features' of human language is that the relationship between the sound of a word and its meaning is arbitrary [1,2]; given the sound of an unknown word, it is not possible to infer its meaning.
12. **Assessment** :It is normally used as a general term to refer to various types of testing or evaluation. It is discovering, judging, testing or forming an opinion on

learners' ability, proficiency or progress either formally or informally. Continuous assessment A type of testing which is different from a final examination. Some or all of the work that learners do during a course is considered by the teacher on a regular basis and contributes to the final grade given to learners. It may also include regular monitoring of classroom performance and contribution.

13. **Behaviorism** :Behaviorism (or behaviourism) is a systematic approach to understanding the behavior of humans and other animals. It assumes that all behaviors are either reflexes produced by a response to certain stimuli in the environment, or a consequence of that individual's history, including especially reinforcement and punishment, together with the individual's current motivational state and controlling stimuli.

14. **Behaviorist Approach :**Key Features of Learning (Behaviorist Approach) Learning is entirely a product of experiences Learning is controlled by the conditions under which it takes place. Variations in learning do exist. Language learning is practice based. Imitation, repetition, reinforcement and retention have significant role in language learning.

15. **Body language** :Body language is a type of non-verbal communication in which physical behavior, as opposed to words, are used to express or convey information.

16. **Brainstorming** :Generating lots of ideas from many individuals

17. **Brian Based Learning :**Brain-based learning refers to teaching methods, lesson designs, and school programs that are based on the latest scientific research about how the brain learns, including such factors as cognitive

development—how students learn differently as they age, grow, and mature socially, emotionally, and cognitively.

18. **Cognitivism** :In psychology, cognitivism is a theoretical framework for understanding the mind that gained credence in the 1950s. The movement was a response to behaviorism, which cognitivists said neglected to explain cognition.
19. **Competence** :Linguistic competence is the system of linguistic knowledge possessed by native speakers of a language. It is distinguished from linguistic performance, which is the way a language system is used in communication.
20. **Constructivism** :Constructivism is a philosophical viewpoint about the nature of knowledge. Specifically, it represents an ontological stance.
21. **Controlled Techniques** :Controlled Techniques: warm up, setting, organizational, content explanation, role-play demonstration, reading aloud, question-answer, display, drill, translation, dictation, copying, identification, review testing
22. **Core Grammar** :Core-grammar is that part of the relatively stable (steady) state of the language faculty (i.e. of the adult I-language) that results from the setting of parameters in UG (the initial state of the language faculty [Chomsky, Noam A. 1986. Knowledge of language: its nature, origin and use. Praeger, New York.]
23. **Corrective Feedback** :Visual, auditory, or tactile indications that the student stated the incorrect response. This type of feedback supplies the correct response, re-teaches skills, and re-tests student learning. It also includes some types of encouragement, such as “Try again!”
24. **Critical thinking** :The ability to analyze information.

ENG505_Glossary

25. **Culture** :Culture is the social behavior and norms found in human societies. Culture is considered a central concept in anthropology, encompassing the range of phenomena that are transmitted through social learning in human societies.

26. **Deductive Learning** :Starts by giving learners rules, then examples and then practice. It is teacher-centered

27. **Descriptive Adequacy** :Descriptive adequacy is a quality measure for the evaluation of linguistic theories. A theory attains a higher level of descriptive adequacy if it can handle more natural language data from more languages. Descriptive Adequacy (to characterize what human languages are like; according to Chomsky, it is characterizing the possible human grammars)

28. **Edward Anthony's Framework of Language** :Edward Anthony proposed three-level framework (1965) based on approach, methods and techniques. According to him, "the arrangement is hierarchical. The organizational key is that techniques carry out a method which is consistent with an approach." He defines approach, method and technique respectively as follows: Approach: A set of principles or ideas about the nature of language learning. An approach is axiomatic. Method: an overall plan for the orderly presentation of language material. Technique: A particular trick, stratagem, or contrivance.

29. **EFL** :A traditional term for the use or study of the English language by non-native speakers in countries where English is generally not a local medium of communication.

30. **ESL** :English as a Second Language (ESL or TESL) is a traditional term for the use or study of the English language by non-native speakers in an English-speaking environment. That environment may be a country in which English is the mother tongue (e.g., Australia, the U.S.) or one in which English has an

established role (e.g., India, Nigeria). Also known as English for speakers of other languages.

31. **ESP** :English for Specific Purposes (ESP) is a learner-centered approach to teaching English as an additional language, which focuses on developing communicative competence in a specific discipline such as academics, accounting, agrology, business, IT, teaching, and engineering.

32. **Evaluation** :It involves making qualitative judgments, often subjective, about various aspects of language performance. Other uses of the term are: • materials' evaluation • evaluation of teaching • evaluation of learning etc. It is a method of determining if students learned what they were taught. It is usually conducted at the end of a lesson.

33. **Explanatory Adequacy :**Explain why they (the human languages) are that way.

34. **Explicit Learning :**Explicit Learning: Conscious awareness of a learner's modifying of his/her knowledge base. Extrinsic motivation :Extrinsic motivation is fueled by the anticipation of reward from outside.

35. **Foreign Language :**English as a Foreign Language – English language programs in countries where English is not the common or official language. It is used in American university programs where international students study English although the use of the word "foreign" is now avoided in some schools because of its xenophobic connotations.

36. **Free Techniques :**Free Techniques: Role play, Games, Drama, Simulation, Report, Problem solving, Interview, Discussion Imitation :It means a child learns a language while listening to the adults and other people in society and thus

imitates (copy) what they say. In this way, the child eventually learns the whole language.

37. **Implicit Learning :**Implicit Learning: Change in the learner's knowledge base but outside his/her conscious introspection.

38. **Individual Learning Differences** :Individual Differences: There are a variety of individual differences that must be of concern to classroom teachers. Some of the most prominent are academic ability (or intelligence), achievement level, gender, learning style, and ethnicity and culture.

39. **Inductive learning** :Learning to apply the rules of a language by experiencing the language in use, rather than by having the rules explained or by consciously deducing the rules

40. **Inductive Thinking :**Going from the specific to the general. See also deductive thinking.

41. **Inferencing** :This is the means by which the learner forms hypotheses, through attending to input, or using the situational context to interpret the input.

42. **Innate** :Chomsky to explain an innate psychological capacity for language acquisition; mentalist theories of language acquisition emphasize the importance of the innate capacity of the language learner at the expense of environmental factors. Each learner is credited with a LAD which directs the process of acquisition. This device contains information about the possible form that the grammar of any language can take.

43. **Integrated Skills** :An integrated skills lesson combines work on more than one language skill. For example, reading and then writing or listening and speaking.

44. **Intelligence** :The ability to use knowledge

ENG505_Glossary

45. **Interference** :Interference happens when the learner's mother tongue affects performance in the target language, especially in pronunciation, lexis or grammar. For example, a learner may make a grammatical mistake because they apply the same grammatical pattern as they use in their mother tongue to what they want to say in the target language, but the L1 grammatical pattern is not appropriate in L2.

46. **John Schumann's Stage 1 of culture acquisition** :Stage 1-is a period of excitement and euphoria over the newness of the surroundings.

47. **L1** :L1 stands for first language - i.e the language that a speaker acquired naturally as a child. This is also often referred to as the speaker's mother tongue.

48. **L2** :L1 stands for first language - i.e the language that a speaker acquired naturally as a child. ... L2 or second language = a language which the person acquires/learns for use within the community in which they are living.

49. **LAD** :Language acquisition device. Holds the fundamental rules for language. Advocates that language is fundamentally similar across all humanity. Enables a child not to commit error one expects.

50. **LAD (Language acquisition device) :**A term coined by Noam Chomsky to explain an innate psychological capacity for language acquisition; mentalist theories of language acquisition emphasize the importance of the innate capacity of the language learner at the expense of environmental factors. Each learner is credited with a LAD which directs the process of acquisition. This device contains information about the possible form that the grammar of any language can take.

51. **Language Chunks** :In studies of language acquisition, the term chunk refers to several words that are customarily used together in a fixed expression, such as

"in my opinion," or "to cut a long story short." Also, known as language chunks, lexical chunks, lexical bundles, lexical phrases, and collocations.

52. **Language proficiency** :It is what a learner can do and/or how well he/she can perform using language, given an identified and defined purpose. Language proficiency is often measured with reference to a scale of levels. It is the level of competence at which an individual is able to use language for both basic communicative tasks and academic purposes.

53. **Language Universals** :It means the human languages are essentially identical and acquired in a similar manner. All languages share certain properties e.g. all languages have consonants and vowels.

54. **Language Use :**Activities which involve the production of language in order to communicate. The purpose of the activity might be predetermined but the language which is used is determined by the learners. Thus, getting a new class of learners to walk round and introduce themselves to each other would be a language use activity, and so would be getting them to complete a story.

55. **Language Variety :**Variations of a language used by particular groups of people, includes regional dialects characterized by distinct vocabularies, speech patterns, grammatical features, and so forth; may also vary by social group (sociolect) or idiosyncratically for a particular individual (idiolect).

56. **Langue** :The internal system of language within in a person is called langue.

57. **Law of Effect :**A behavior that is followed by a pleasant consequence is likely to be repeated, and any behavior followed by unpleasant consequences is likely to be stopped learning. "The connection of a certain act with a certain situation and resultant pleasure and the main purpose of the study of the animal mind are

to learn the development of mental life down through the phylum, to trace in particular the origin of human faculty."

58. **Learner autonomy** :It is the capacity learners have to take charge of their own learning. This implies choice of aims, content, approaches and/or forms of evaluation based on reflection related to individual needs and interests.

59. **Learner characteristics :**The typical things about a learner or learners that influence their learning, e.g. age, L1, past learning experience, learning style.

60. **Learner feedback** :It is an account of progress / performance given to learners by teachers or peers to enable them to reflect on, analyze and evaluate what they have or have not achieved. It may also refer to what learners tell those who are teaching them and/or monitoring their progress, how well they, the learners, believe they are performing.

61. **Learner strategy :**They are the behaviours or actions that learners engage in, in order to learn or use the L2. They are generally considered to be conscious. See also cognitive and meta-cognitive strategies. Learner training :The use of activities to help learners understand how they learn and help them to become autonomous, independent learners.

62. **Learner-centered :**When the learners are at the center of the activities and have the chance to work together, make choices and think for themselves in a lesson.

63. **Learners' Preferences :**Learners learn a second language in many ways. Each learner prefers different learning styles and techniques. S/he has a mix of learning styles but may find that s/he has a dominant style of learning. It means that learners receive information through their senses and prefer some senses to others in specific situations. Usually, they learn more effectively when they learn

through their own initiatives. When their learning styles are matched with appropriate teaching styles, their motivation and achievement increase and are enhanced. Thus, researchers and educators try to discover their learners' style preferences so that they can help them learn in accordance with their own preferred learning styles.

64. **Learners' attitudes :**Attitude is usually defined as a disposition or tendency to respond positively or negatively towards a certain thing such as an idea, object, person, or situation. Students have positive or negative attitudes towards the language they want to learn or the people who speak it.

65. **Learning** :It is the acquisition of knowledge or skills through study, experience, or being taught.

66. **Learning by doing** :A way of learning by doing activities. The rules of language used in the activity are looked at either after the activity or not at all.

67. **Learning by using** :Learning acquired by repeated use of tools or facilities, but without instruction.

68. **Linguistic Input** :A major debate in understanding language acquisition is how these capacities are picked up by infants from the linguistic input. Input in the linguistic context is defined as "All words, contexts, and other forms of language to which a learner is exposed, relative to acquired proficiency in first or second languages".

69. **Linguistic knowledge** :Linguistic competence is the system of linguistic knowledge possessed by native speakers of a language. It is distinguished from linguistic performance, which is the way a language system is used in communication.

ENG505_Glossary

70. **Mediation Theory** :Charles Osgood (1953,1957)claims that the linguistic stimulus (a word or sentence) elicits a "mediating" response that is self-stimulating Self-stimulating refers to “Representational mediation process"

71. **Mentalist Approach :**Presence of Language Acquisition Device (LAD) as an inherited ability. Children appear to be ‘hard-wired’ to acquire the grammar. Lacks evidence of grammatical errors in children. A child would notice if an ungrammatical sentence is uttered. Generates awareness of what is grammatical or ungrammatical

72. **Meta-cognition** :Meta-cognition is "cognition about cognition", "thinking about thinking", "knowing about knowing", becoming "aware of one's awareness" and higher order thinking skills. The term comes from the root word Meta, meaning "beyond".

73. **Method** :It is a particular procedure for accomplishing or approaching something, especially a systematic or established one.

74. **Mother tongue** :often referred to as the mother tongue, is normally the language acquired by the learner as his/her first language and usually (though not always) spoken in the learner’s home. It can also be referred to as a learner’s L1 (first language). It is sometimes used as a synonym for first language, primary language, or native language. Thus, it also refers to language(s) spoken in the home by significant others (e.g., family members, caregivers) who reside in the child’s home.

75. **Motivation** :Motivation is the thoughts and feelings which make us want to do something and help us continue doing it.

76. **Multiple Intelligence- MI :**A theory of intelligence that characterizes human intelligence as having multiple dimensions that must be acknowledged and

developed in education. The theory of MI is based on the work of the psychologist Gardner who posits 8 intelligences.

77. **Native Language** :Primary or first language spoken by an individual. See L1.

78. **Native Speaker** :Someone who has spoken a particular language since they were a baby, rather than having learnt it as a child or adult. See L1/L2 and mother tongue.

79. **Nativism** :Nativist theories argue that humans are pre-programmed with the innate ability to develop language and Noam Chomsky, the main theorist associated with the nativist perspective, developed the idea of the Language Acquisition Device (LAD).

80. **Nature versus Nurture :**Plato's Theory: In the nature versus nurture debate, Plato tended to side with nature, believing that knowledge was innate. Noam Chomsky's 1986 "Knowledge of Language' begins with informal characterization of 'Plato's Problem: The problem of explaining how we can know so much given so little evidence." Descartes's Philosophy: Like Plato, French philosopher Descartes believed that language acquisition was a simple and easy process and reinforced the innateness of language as it reflected the general rationality of human beings. It reinforces the theory of Nativisim - some aspects of linguistic knowledge are innate, meaning they are present at birth. John Locke's Tabula Rasa or blank state: It refers to the idea that all knowledge comes from outside ourselves through sensory experience rather than through innate knowledge recommends practical learning to prepare people to manage their social, economic, and political affairs efficiently. Ancient philosophy of learning was more concerned with knowledge and experience.

ENG505_Glossary

81. **Nature vs Nurture :**One of the oldest arguments in the history of psychology is the Nature vs Nurture debate. Each of these sides have good points that it's really hard to decide whether a person's development is predisposed in his DNA (Nature), or a majority of it is influenced by this life experiences and his environment (Nurture).

82. **Need analysis :**Needs is actually an umbrella term that embraces many aspects, incorporating learners' goals and backgrounds, their language proficiencies, their reasons for taking the course, their teaching and learning preferences, and the situations they will need to communicate in.

83. **Oral skills :**Oral skills include the ability to understand and engage in a discipline's discourses and rhetorical situations by delivering formal oral presentations or performances and to express and interpret ideas—both their own and those of others—in clear oral presentations or performances.

84. **Parole** :The actual linguistic behaviour or performance of individuals, in contrast to the linguistic system of a community.

85. **Pavlovian Conditioning** :Key Features of Pavlovian Conditioning: Stimulus Response Unconditioned Stimulus Conditioned Stimulus Conditioned Response Extinction Spontaneous Recovery Generalization Discrimination

86. **Performance** :The ability to effectively use new information in a productive manner.

87. **Productive Activities** :Productive Activities are designed for the development of the productive skills.

88. **Receptive Activities** :Receptive Activities are designed to develop the receptive skills.

By ASFAND YARR

ENG505_Glossary

89. **Repetition** :To say something again, often for practice. This is often done in drills. In language learning, repetition makes the child learn a language.

90. **Response (n.), respond (v.) :**A reply or reaction to communication such as a laugh, a smile, saying something. Teachers and learners may respond to each other in writing, speech or in the form of a facial expression.

91. **Scaffolding** :A term originally used to refer to teacher talk that supports pupils in carrying out activities and helps them to solve problems. Examples include simplifying tasks by breaking them down into smaller steps; keeping pupils focused on completing the task by reminding them of what the goal is; showing other ways of doing tasks. Scaffolding also includes support strategies for writing and speaking, examples of which are the use of substitution tables and language frames. Scaffolding is temporary support which is gradually taken away so that learners can eventually work without it.

92. **Second Language/L2** :The term is used to refer to a language which is not a mother tongue but which is used for certain communicative functions in a society. Thus Ukrainian is a second language in Transcarpathia for Hungarians.

93. **Simulation** :An activity in which students are given real-life problem-solving situations. The emphasis is on students' decision-making abilities.

94. **Speech Acts** :Speech Acts are the utterances which fulfill certain actions of what is said by people in the course of interpersonal communication.

95. **Speech community** :A speech community is a group of people who share a set of linguistic norms and expectations with regard to how their language should be used. Exactly how to define speech community is debated in the literature.

96. **Stimulus** :An event that causes something else to happen or take place

By ASFAND YARR

ENG505_Glossary

97. **Strategies** :They are seen as a hinge between a learner's resources (competences) and what he/she can do with them (communicative activities)'.

98. **Tabula Rasa** :Tabula rasa refers to the epistemological idea that individuals are born without built-in mental content and that therefore all knowledge comes from experience or perception.

99. **Target language** :The language which is the focus of the lesson or a part of the lesson. It could be grammar, lexis, functions or pronunciation. 2. The language being studied (often called the L2). This is the language that the learner is attempting to learn.

100. **Target language culture :**The traditions and culture of the country whose language is being studied.

101. **Teacher-centered** :When the teacher is seen as the source of all knowledge in the learning process and acts as the provider of knowledge rather than making use of the knowledge and experience of the students to guide the learning process.

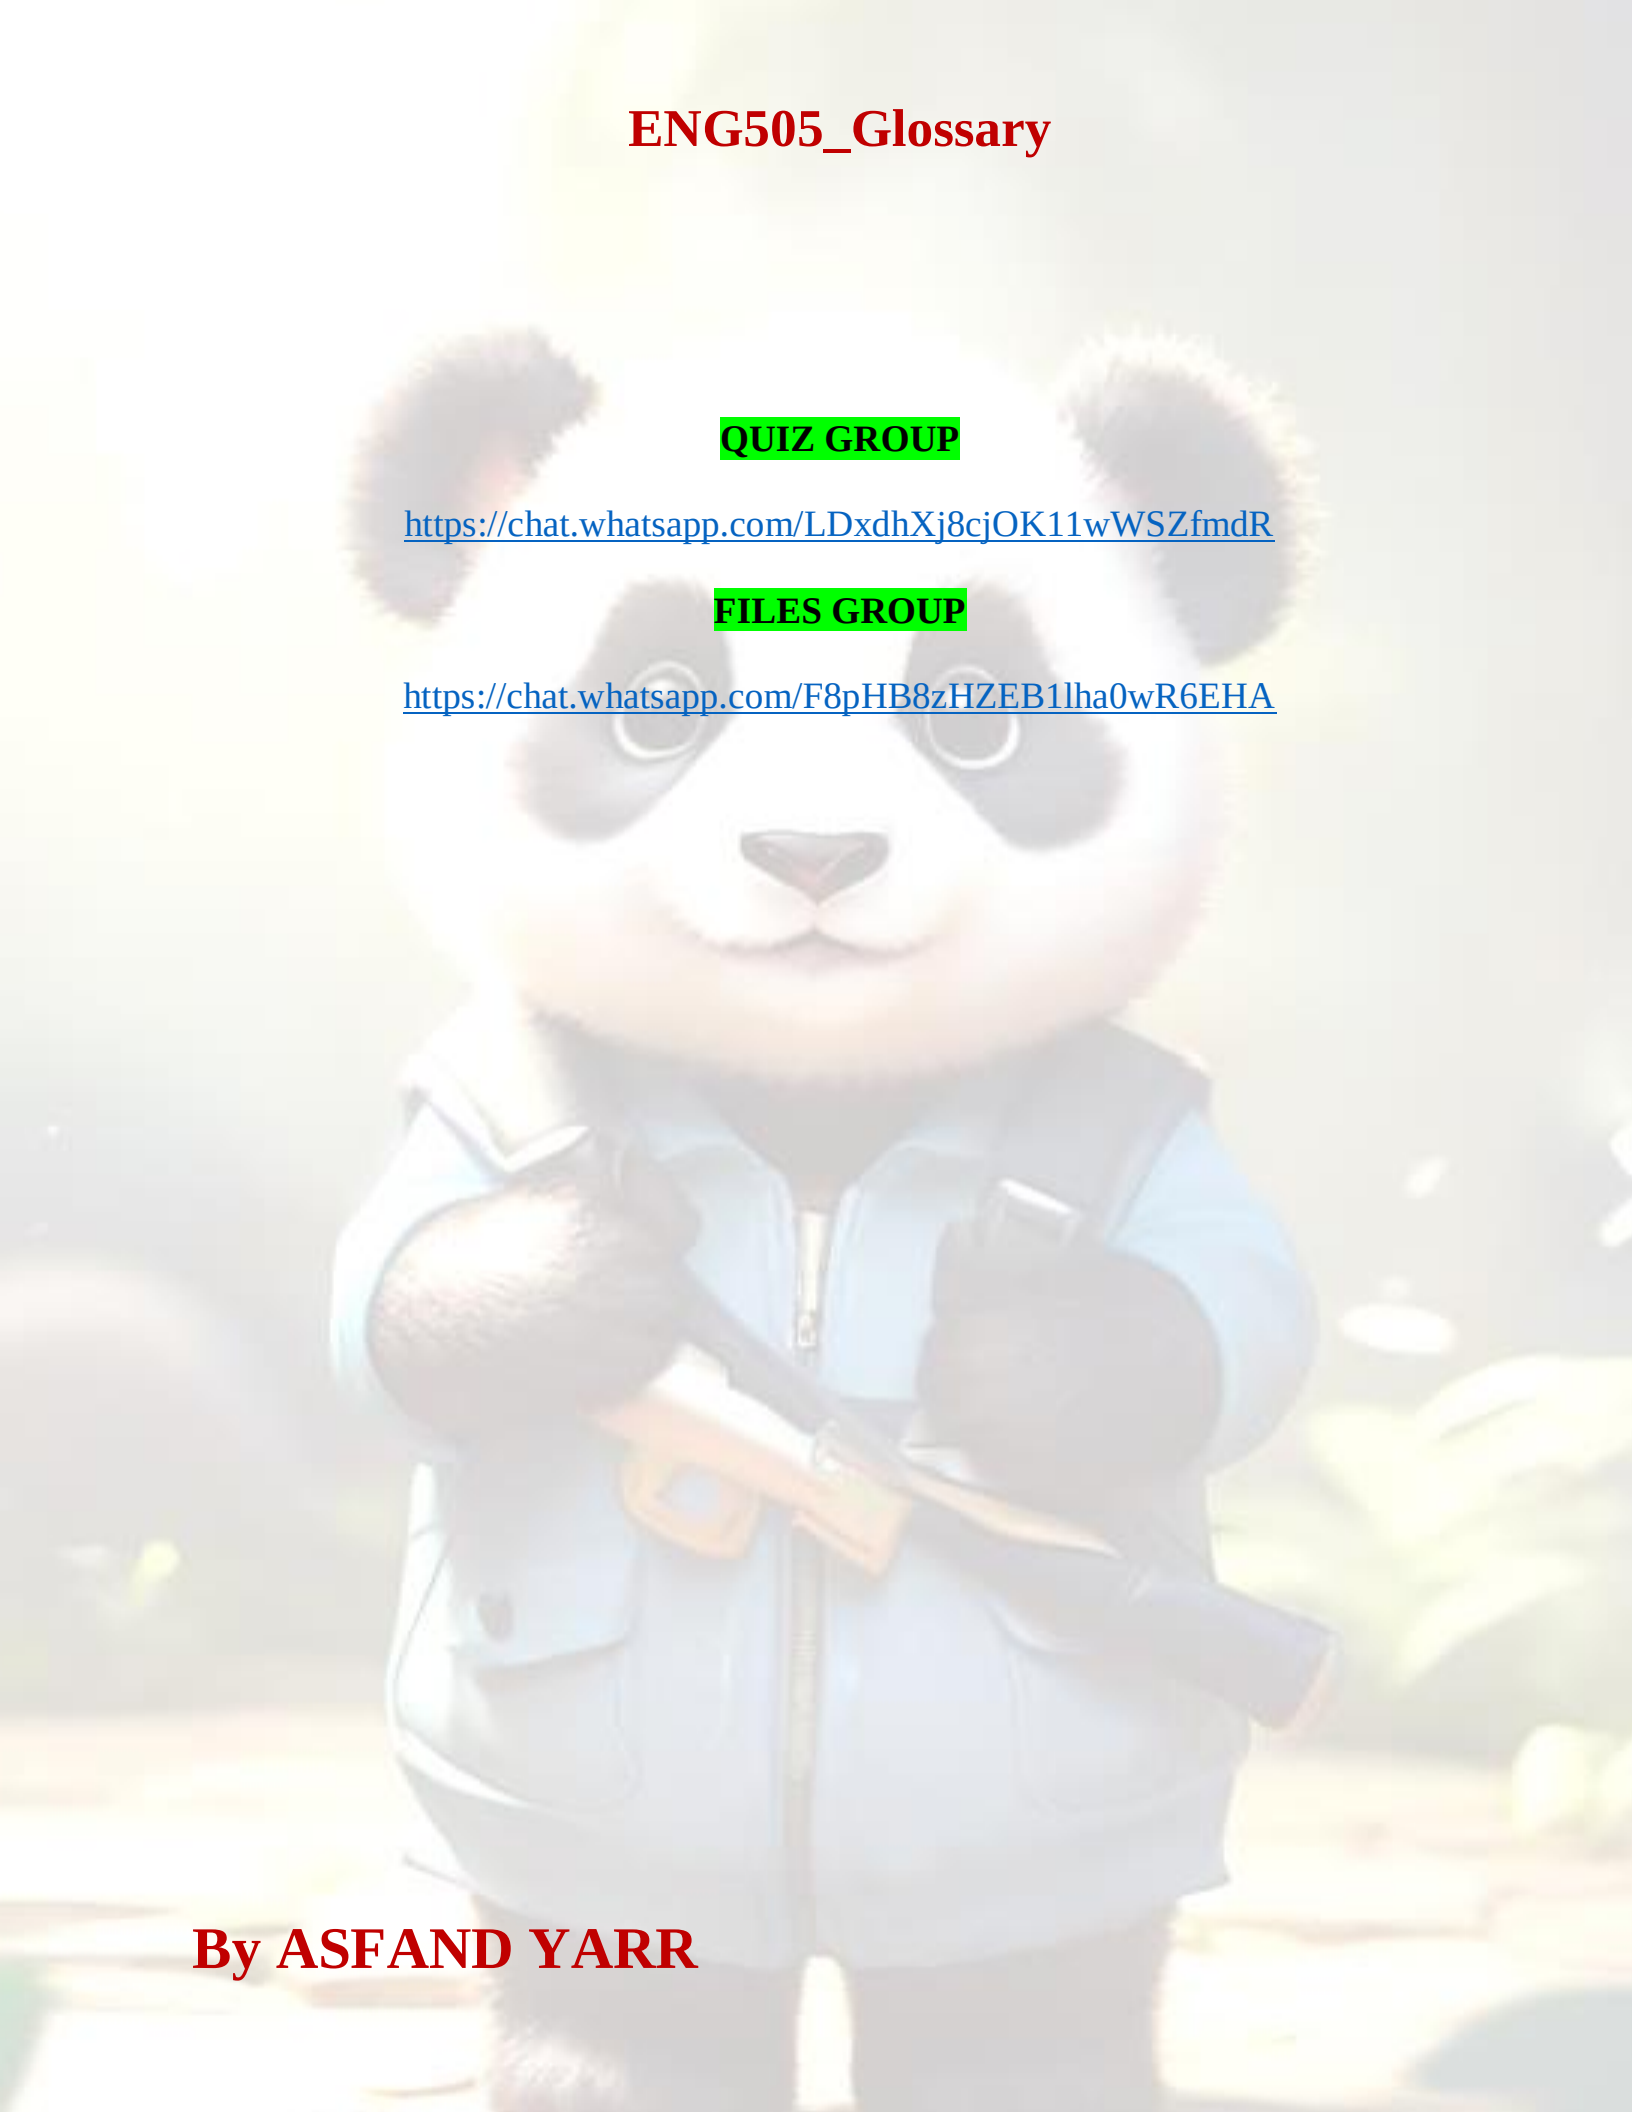

102. **Teaching approaches** :A teaching method comprises the principles and methods used by teachers to enable student learning. These strategies are determined partly on subject matter to be taught and partly by the nature of the learner.

103. **Technique** :A technique is a specific classroom device or activity, [such as a role-play] that is consistent with a method and therefore in harmony with an approach. Some techniques are used in more than one method, e.g. modeling & repetition.

104. **Universal Grammar** :Universal Grammar is usually defined as the "system of categories, mechanisms and constraints shared by all human languages and considered to be innate".
