ENG517_Glossary

1. **Affordances** :Affordances are the visual clues that an object gives to its use as well as what the program is capable of doing in terms of both intended and unintended functions. A chair is for sitting on and the size of the seat suggests that it might be comfortable for that purpose, but the chair can also be stood upon or used as a weapon; these are other affordances. An object can have both affordances and misaffordances, things that distract from the object's intended use. Affordances can be both obvious and learned. A misaffordance for a chair would be design features that disguised its purpose or interfered with its principal purpose of being sat upon.
2. **AI** :Artificial Intelligence refers to the ability of a computer to mimic human thinking processes.
3. **AILA** :Association Internationale de Linguistique Appliquée.
4. **ALLP** :The Athena Language Learning Project developed at Massachusetts Institute of Technology.
5. **ALTE** :Association of Language Testers in Europe.
6. **Applet** :A small application, often written in the Java computer language, that can be embedded in a web page to perform a small function.
7. **Asynchronous** :Refers to communication that takes place at different times, for example, through email in which a message is sent and may be read at leisure by the recipient.
8. **Avatar** :is an online personality that might resemble a person or almost anything else. Avatars are used in MOOs to represent a person and can be manipulated to move around an environment and interact with other participants' avatars.
9. **BASIC** :Beginner's All-purpose Symbolic Instruction Code, a computer programming language developed in the mid-1960s.

By ASFAND YARR

ENG517_Glossary

10. **Beta software** :a pre-commercial version of a software package that is made publicly available to identify problems in the software.
11. **Bookmark** :An Internet bookmark is a marker for a web page; the word is also used as a verb.
12. **Bot** :A small automated program which searches and indexes a range of websites for some specific information, such as the best price for an airline ticket or to create a current reference set. Bots are also known as spiders, ants, web crawlers and other terms reflecting small variations in function.
13. **CAI** :Computer-Aided Instruction refers to learning at the computer, but not necessarily to do with language. Although not necessarily intended by all those who use the acronym, the term instruction suggests a teacher-centred approach.
14. **CAL** :Computer-Assisted Learning. Similarly to CAI, CAL may refer to the learning of any subject (including language learning) using a computer. But in contrast to CAI, CAL emphasizes the learner.
15. **CALI** :Computer-Assisted Language Instruction, a term commonly used in North America.
16. **CALICO** :Computer-Assisted Language Instruction Consortium.
17. **CALL** :Computer-Assisted Language Learning can be defined as learning language at the computer either as a direct activity through structured lessons or during an activity peripheral to the study of language but that, nonetheless, promotes language awareness and acquisition. In some cases, computer software that is used for teaching subjects other than language, such as mathematics, is included under the umbrella of CALL if the software's language has been simplified or otherwise adapted for use by non-native speakers. For the sake of brevity, in this book CALL is used as a collective term to include related terms

except where a specific distinction needs to be made or in quotes from the literature where an author's original choice of term is preserved.

18. **CALT** :Computer-Assisted Language Testing.
19. **CAT** :Computer-Assisted Teaching (or Computer-Adaptive Testing).
20. **CBL** :Computer-Based Learning.
21. **CBT** :Computer-Based Training tends to refer to programs used for corporate training with narrow and short-term instructional goals but may refer more generally to any kind of training. The term is not often used in the language-learning context except where it refers to the teaching of some discrete language learning skills, such as listening training.
22. **CD-ROM** :Compact Disk-Read Only Memory is a disk storage format that can hold approximately 600 megabytes of information.
23. **chat room** :a designation for a private space used in Internet Chat Relay programs that allow for discussion on individual topics. Two or more participants wishing to discuss an issue may construct the virtual rooms at any time.
24. **CMC** :Computer-Mediated Communication refers to a situation in which computer-based discussion may take place but without necessarily involving learning.
25. **CMI** :Computer-Mediated Instruction refers to instruction that takes place through the use of a computer and may, for example, include learning that occurs when a learner communicates with a distant tutor through email or simply uses some form of computer hardware and software. The term instruction shows a teacher-centred approach.
26. **cognitive overhead** :refers to the learning that needs to be done before using a software program.

ENG517_Glossary

27. **cognitive overload** :refers to a computer software presentation which distracts the learner from the purpose.
28. **Colossus** :Colossus was the first British mainframe computer, used to assist in deciphering German Enigma cryptograms.
29. **computer literacy** :vaguely refers to a set of skills and a base of knowledge required of learners. Because of continuous advances in technology, it is difficult to define such standards.
30. **computer-adaptive testing** :computer-adaptive testing is a program in which the learner is directed along easier or more difficult tasks or links depending on answers to questions at key points of the program.
31. **cookie** :data sent to a computer to record your actions on a certain web-site, either for commercial purposes or to speed up navigation.
32. **Cybercrime** :criminal activity using computers and the Internet.
33. **Cyberspace** :author William Gibson created the metaphor cyberspace in his 1984 science fiction novel Neuromancer. Cyberspace retains its original (although poetic) definition as 'a consensual hallucination' and 'a graphic representation of data' (Gibson, 1984: 51).
34. **Database** :a corpus of information which is accessible for selection and reorganization by predetermined criteria, as simple as alphanumeric ordering or by more complicated searches, such as by semantic field.
35. **DDL** :Data Driven Learning, a term used in corpus linguistics to describe learner activities using corpora.
36. **DEC** :Digital Equipment Corporation.

By ASFAND YARR

ENG517_Glossary

37. **Digg** :One of several services for marking Internet content such as news stories, videos, music and images, to bring it to the attention of others through an accumulation of votes. (www.digg.com)
38. **digital signature** :a unique code that verifies a person's identity which can be attached to computer documents.
39. **DVD** :Digital Video Disks have approximately ten times the storage capacity of CD-ROMs.
40. **EAP** :English for Academic Purposes.
41. **EFL** :English as a Foreign Language.
42. **Emoticon** :a small graphic, often made from punctuation symbols, that helps to express emotion in an email message
43. **ENIAC** :Electronic Numerical Integrator and Calculator, an American computer intended for cryptography, but built too late to be of use in the Second World War (completed in 1945).
44. **ESL** :English as a Second Language.
45. **EUD** :End User Development refers to software that includes features that can be easily programmed by non-professionals, such as macros in Microsoft Office.
46. **EUROCALL** :European Association of Computer-Assisted Language Learning.
47. **Facebook** :a social networking website on which users create personal multimedia profiles and exchange information with other members, called friends who can sometimes be allowed access in terms of a geographical area, such as a college campus. One feature is a wall on which messages open to all friends can be written.
48. **fidelity** :refers to the degree of realism in a computer simulation.

By ASFAND YARR

ENG517_Glossary

49. **folksonomy** :a slang expression for a taxonomy created by a group of amateur contributors to a wiki or other web application.
50. **GPS** :Global Positioning System
51. **GUI** :Graphical User Interface: icons used on the computer screen to automate some functions.
52. **HCI** :Human Computer Interface, a term found in early publications in CALL, but now usually abbreviated to interface.
53. **Homepage** :the first page or starting point of a website with navigation tools to access the rest of the website.
54. **hotsync** :refers to one device sharing data automatically with another, for example, a PDA with a desktop computer.
55. **HTML** :Hyper Text Markup Language, text files that contain formatting instructions so that certain design and typographical conventions can be shared across computers.
56. **HTTP** :Hyper Text Transfer Protocol, the method used to make hypertext documents available and readable on the World Wide Web.
57. **HyperCard** :a software program developed by Apple Computer which creates a set of virtual index cards that can be extensively cross-referenced. On these cards, text, images, audio, animations and video can be added, along with questions and buttons to take users to other cards that might feature further questions, information and /or answers.
58. **hyperlink** :refers to the hypertext link usually indicated by blue underline beneath text or a thin blue line around an image. Clicking on the hyper-link takes one to a new page or a pop-up page with further information.
59. **IBM** :International Business Machines.

By ASFAND YARR

ENG517_Glossary

60. **ICALL** :Intelligent Computer-Assisted Language Learning refers to a program or system that adapts to the learner and assesses his or her mistakes and provides tailored feedback recommending.
61. **ICQ** :I seek you, an Internet Relay Chat (IRC) program which allows users to be alerted to other designated users when they are both using the WWW.
62. **interface** :the appearance of the computer screen that, in some way, offers a metaphorical experience for the user to interact with data. The most prevalent interface is the desktop.
63. **IRC** :Internet Relay Chat, a form of WWW-based email that allows multiple computer users to engage in an online discussion.
64. **ISP** :Internet Service Provider, a company that supplies Internet access to individuals and businesses.
65. **IT** :Information Technology, a general term referring to computers as well as services such as the WWW.
66. **KWIK** :Key Word In Context, a process used in concordancing.
67. **LAN** :Local Area Network, a system of connecting a series of computers so as to allow them to share resources and communicate with each other.
68. **locus of control** :refers to the continuum between the program's and the learner's responsibility for decisions about the outcomes, sequence of learning, learner interactions and even the content.
69. **Memex** :a desk-sized (MEMory EXtension) system which would access and organize large amounts of information (Bush, 1945).
70. **MIT** :Massachusetts Institute of Technology, home of the Media Lab, site of many innovations in computing.
71. **MMOG** :Massively Multiplayer Online Games MOO MUD Object Oriented.

By ASFAND YARR

ENG517_Glossary

72. **Moodle** :Modular Object-Oriented Dynamic Learning Environment, an open source course management system for web-based e-learning; see Moodle.org
73. **MUD** :Multi-User Dungeon /Domain.
74. **multimedia** :offer two or more communication channels such as video and text. Early CALL programs primarily displayed text-only, either as teletype printouts or on video display screens. As the capabilities of the technology have increased, most programs increasingly offering multi media, particularly pictures with text, but increasingly, sound and video as well.
75. **netiquette** :net etiquette refers to etiquette on the Internet in terms of issues such as privacy, politeness and appropriate language, emailing and so on.
76. **newbie** :someone using software or interacting on a website for the first time, sometimes with inappropriate behaviour.
77. **newsgroup** :an Internet-based discussion on a particular topic.
78. **open source** :refers to software for which the original code is available to developers to create further refinements and variations. Java is an example of an open source programming language.
79. **PDA** :Personal Digital Assistant, a mobile palmtop computer.
80. **PLATO** :Programmed Logic/Learning for Automated Teaching Operations, an early computer platform for teaching and learning.
81. **podcast** :a computer-based broadcast, intended to be downloaded onto an iPod music player through iTunes, an Apple—based music system. Anyone with a computer and a microphone can create a podcast episode and dis-tribute it via the web.

By ASFAND YARR

ENG517_Glossary

82. **remote access/remote desktop** :a technology that allows one to see and operate one computer from another computer; it is often used by a professional troubleshooter to deal with a user's computer problem.

83. **RSS** :Resource Description Framework Site Summary has a more popular and descriptive folk etymology: Really Simple Syndication. It is a way for a user to identify a topic or website of interest and new information automatically streamed. Typical RSS feeds include news stories.

84. **scaffolding** :is the process by which one learner helps another grasp words and ideas by providing and building upon partial information.

85. **schema theory** :'A theory of language processing which suggests that discourse is interpreted with reference to the background knowledge of the reader or listener' (Nunan, 1993: 124).

86. **social networking** :refers to ways of connecting with others through blogs based on web services. Some are aimed at connecting profes-sionals, such as LinkedIn (http://www.linkedin.com), and some are more for entertainment.

87. **Synchronous** :refers to communication that takes place at the same time, such as through chatlines.

88. **TELL** :Technology Enhanced Language Learning usually includes CALL but also refers to any other technology that might be used in the classroom. For example, video, tape-recorders or even entire listening labs. These distinctions are becoming blurred as computers incorporate and become incorporated in other technologies. For example, modern CALL software often includes video and audio tape-recording facilities and language labs are increasingly computerized.

89. **Twitter** :an online communications service that allows people to connect in short messages, called Tweets, of 140 characters or less.

By ASFAND YARR

ENG517_Glossary

90. **UNIX** :UNiversal Interactive eXecutive or UNiversal Inter-eXchange or UNIversity eXchange; the etymology is so far only anecdotal.

91. **Virtual classroom** :Derycke et al. (1995) credit Roxanne Hiltz as coining the term and explain its qualities: 'the electronic classroom becomes virtual because it can relax the spatial constraints (users at different locations no matter how far apart) and the temporal constraints (users interacting over time via asynchronous communications). In fact the classroom is a virtual place where the learner can find not only pedagogical resources but also human (social) resources to support him /her in the distance learning process'

92. **virtual reality** :an illusion of a reality created by a computer system, either through multimedia and peripheral immersive devices such as headphones and screen goggles, or an environment in which characters on-screen interact with and model human behaviours.

93. **VRML** :Virtual Reality Modelling Language, a computer language for documents that present 3-D worlds and objects.

94. **Web 2.0 :**a collective term for a series of new Internet innovations such as blogs, social networking sites and wikis.

95. **Wiki** :a website to which content can be added and edited by anyone with access to the Internet. The term wiki comes from the Hawaiian phrase wiki wiki, meaning super fast.Wikipedia :an online encyclopaedia in continuous development by thousands of volunteer contributors who add and edit articles, sometimes maliciously

96. **wizard** :a program used to automate choices in a software program.

By ASFAND YARR

ENG517_Glossary

97. **WWW** :World Wide Web is a protocol that enables Internet users to share information with other Internet users.

98. **ZPD** :Zone of Proximal Development, associated with Lev Vygotsky, refers to the idea that the potential for cognitive development is limited to a certain time span.
