Question # 3 of 10 (Start time: 08:54:26 PM, 26 June 2025)

Total Marks: 1

What is the primary purpose of calculating the distance between fuzzy sets?

Select the correct option

 Reload Math Equations

To defuzzify the fuzzy sets.

To determine their intersection.

To measure the degree of similarity or dissimilarity between them.

To find their union.

Question # 4 of 10 (Start time: 08:54:55 PM, 26 June 2025)

Total Marks: 1

Which of the following properties is NOT typically associated with Nebla-implications?

Select the correct option

 Reload Math Equations

Associativity

Symmetry

Monotonicity

Continuity

Question # 5 of 10 (Start time: 08:55:44 PM, 26 June 2025)

Total Marks: 1

What is a characteristic of the Hamming distance between two fuzzy sets?

Select the correct option

Reload Math Equations

It measures the total number of elements in the fuzzy sets.

It squares the differences in membership values before summing them.

It only considers the maximum difference between memberships.

It is the sum of absolute differences in membership values.

Question # 6 of 10 (start time: 08:56:25 PM, 26 June 2025)

Total Marks: 1

Nebia-implications are derived from which of the following types of operators?

Select the correct option

 Reload Math Equations

Residual operators

Learning with Mala

Negation operators

Disjunction operators

Conjunction operators

Question # 7 of 10 (Start time: 08:56:39 PM, 26 June 2025)

Total Marks: 1

In fuzzy logic, a Nebla-Implication is generally denoted by which symbol?

Select the correct option

[Reload Math Equations](#) $\neg$  $\rightarrow$  $\vee$  $\wedge$

Question # 8 of 10 (Start time: 08:57:24 PM, 26 June 2025)

To

In the context of fuzzy sets, what does the Euclidean distance measure?

Select the correct option

[Reload Math E](#)

The sum of the differences between corresponding membership degrees.

The maximum difference between corresponding membership degrees.

The square root of the sum of squared differences between corresponding membership degrees.

The total area under the fuzzy sets.

Question # 9 of 10 (Start time: 08:58:06 PM, 26 June 2025)

Total Marks: 1

What is the primary characteristic of Nebia-Implications in fuzzy logic?

Select the correct option

Reload Math Equations

They are defined based on probabilistic interpretations.

They are defined based on a continuous t-norm.

They use only the maximum operator.

They use only the minimum operator.

Question # 10 of 10 (start time: 08:58:35 PM, 26 June 2025)

Total Marks: 1

Which of the following statements about the distance between fuzzy sets is true?

Select the correct option

 Reload Math Equations

It is always a positive value or zero.

It is only meaningful for triangular fuzzy sets.

It can only be calculated if the fuzzy sets have the same number of elements.

It always results in a crisp number.
