

Edu406 Final Term notes

Topics No 139 to 141

Topic no 139

- **Teachers as lifelong learners**

A lifelong learner teacher is strongly aware of the relationship between learning and real life, recognizes the need for lifelong learning and is highly motivated to engage in the process, and has the necessary confidence and learning skills.

- **Skills the teachers as a lifelong learners**

In terms of skills the teacher as a lifelong learner is working with classroom management and organization of management and technological integration for example, interpersonal skills within the context of working. In terms of the dispositions the reflective practitioner is someone who is working to develop certain wisdom in terms of reflective practice and to also a cultural awareness and acceptance of values within the school environment. As well as a confidence and a competence with inquiry into the process of teaching and reflection.

- **Knowledge of teacher identity**

In terms of knowledge teacher identity is developed through communication and through critical thinking and through these three domains we can consider particular aspects of the process of reflection. Knowledge definitely includes courses of education in order to develop us intellectually but also developing practical skills whether written or oral. Its written or oral communication which is a means of developing knowledge, quantitative literacy of what we are doing and also the ability to think what we are doing and also the approach to manage successfully as teachers. The skills domain is also significant for building confidence, confidence as teachers and confidence as experimenters in reflective practice.

- **Dispositions teacher as a lifelong learner**

So, the teacher as a lifelong learner is always extending his knowledge, the practical knowledge, the subject knowledge and the experiential knowledge they are acquiring over time. Through this teacher identity really evolves into something quite powerful and of course there is dispositions domain the attitudes, the beliefs and the assumptions that an individual reflective practitioner has about teaching and about the patterns of professional selves.

Topic no 140

- **Knowledge communication**

In terms of knowledge domain there is communication, how the reflective practitioner uses communication skills effectively in terms of teaching and in terms of their reflective practice. The reflective practitioner is using appropriate verbal and written communication, articulation of ideas in order to develop their practice and develop the practice of others and it's not about necessarily communication but it's about using language to build an understanding of ideas and to bring experience together with theory.

- **Knowledge of critical thinking**

Another component of knowledge is critical thinking and the teacher specifically needs to engage specifically with critical thinking because this focus understanding of key aspects of

professional practice and professional identity and informs the creation and generation of the skills for the profession in a very reasoned and logical and informed way which can be trusted by teachers and by communities of practice.

- **Interpersonal skills**

In terms of domains of teaching interpersonal skills becomes very significant for the lifelong learner. The capacity to interact with people to sympathize with others to share sensitivity towards other people in the community and to work with both adults and children very productively very positively in caring and meaningful ways and therefore producing environments which are good examples of these qualities.

- **Integration of Discipline**

Integration of discipline knowledge is very important. The discipline the subject we are working in is significant for lifelong learning because it's the subject we are teaching, we need to integrate the different perspectives of the discipline into our views of the subject and how we intend to teach that subject to the students and how the teacher brings all of these together actually helps with teacher identity.

- **Technology Integration**

Technology integration in the classroom or in the school environment is useful for constructing knowledge because it's through this process which brings reflective practice into the 21st century.

- **Organization and Classroom Management**

Organization and classroom management is another proficiency that the teacher is engaging with, because classrooms are very complex environments. Teaching engages with very complex activities and therefore there needs to be very careful supports mechanism for the reflective practitioner in this regard with relation to reflective practice.

- **Scholarly Inquiry**

Scholarly Inquiry is a very fundamental principle of reflective practice. Teachers need to be well versed with experimentation, exploration and also be knowledgeable about trends and issues which are emerging in teaching and how can we bring these to our own teaching through research and through experimentation within the academic environment.

- **Cultural Awareness and Acceptance**

And also, the cultural awareness and acceptance, the context in which the teacher is working and the diversity of personalities and experiences the teacher is working with. The teacher must provide educational opportunities for everyone, themselves and the students they are working with and their colleagues because this will strengthen everybody's appreciation through the diversity of what is potential and what is possible.

Topic no 141

- **Competency Framework for Lifelong Learning**

To develop teacher identity, we can look at the competency framework for lifelong learning. This is a framework which enables the reflective learner to consider components of their practice which will help them develop their identity as teachers. The competency framework which is about lifelong learning is a framework which is continuous and supportive and most importantly it is also impairing for the individual.

- **What is essential goals?**

There can be essential goals, dictated perhaps by the school community or by wider society. These are goals that are essential for us that we do not have a choice about.

- **Problem-solving goals**

We also have problem solving goals. We experience issues in the classroom, problems in the classroom and therefore we have goals which we set to overcome those problems.

- **Innovation goals**

Then we have innovation goals. Goals which are about change, development and about professional growth which all come together to lead to professional teacher identity and we can look at this in terms of smarter framework.
