

Q.1 What is the basic unit of Protein?

A. Amino acid

B. Glucose

C. Fatty acid

D. Nucleotide

Q.2 Glycosidic linkage is between which two elements or components?

A. Oxygen and nitrogen

B. Nitrogen and sulfur

C. Oxygen and carbon

D. Carbon and hydrogen

Q.3 The internal surface of the plasma membrane contains which structural elements?

A. Peroxisome element

B. Skeletal elements

C. Ribosome elements

D. Mitochondrial elements

Q.4 Which scientist discovered the nucleus in plant cells?

A. Robert Hooke

B. Theodor Schwann

C. Robert Brown

D. Matthias Schleiden

Q.5 New cells arises from:

A. Proteins

B. Dead Cells

C. Damaged Cells

D. Pre existing Cells

Q.6 Protein can be denatured by:

A. Replication errors in DNA

B. pH changes, heat, or chemical agents

C. Protein folding

D. pH

Q.7 All cells of a multicellular organism have

- A. Same genetic material with same functions
 - B. Different genetic materials with different functions
 - C. Different genetic material with same functions
 - D. Same genetic material with different functions**
-

Q.8 Life is a collection of which kind of macromolecules that are able to perform specialized functions?

- A. Random
 - B. General
 - C. Regular
 - D. Systematic**
-

Q.9 Roti is a carbohydrate and contains which type of linkage?

- A. Peptide linkage
 - B. Alpha 1-4**
 - C. Ester linkage
 - D. Beta 1-4
-

Q.10 Microtubules originate from which cellular structure or organelle?

- A. Centrosome**
 - B. Mitochondria
 - C. Golgi bodies
 - D. Nucleus
-
