

Two example of grounded theory?
?????

Explain the validity of secondary data?

A researcher who gathers multiple years of **secondary** financial **data** may express legitimate concern over the **validity** of collecting new survey **data** that asks consumers or managers to report attitudes towards objects or events from several years in the past. **(Internet)**

What are the procedures for implementing narrative research?

The procedures for implementing this research consist of focusing on studying one or two individuals, gathering data through the collection of their stories, reporting individual experiences, and chronologically ordering (or using life course stages) the meaning of those experiences.

What are the two types of ground theory?

Types of grounded theory studies:

- ☐ The two popular approaches to grounded theory are the systematic procedures of Strauss and Corbin (1990, 1998) and the constructivist approach of Charmaz (2005, 2006).
- ☐ In the more systematic, the investigator seeks to systematically develop a theory that explains process, action, or interaction on a topic
- ☐ Charmaz's approach is known as the constructivist grounded theory method as it adheres to a constructivist philosophical approach, wherein both the researcher and participants mutually co-construct meaning during data collection and analysis

What is historiography?

Historiography is the method of doing historical research or of gathering and analyzing historical evidence.

What are type of descriptive statistics explain with example?

Descriptive statistics are brief **descriptive** coefficients that summarize a given data set, which can be either a representation of the entire or a sample of a population. **Descriptive statistics** are broken down into measures of central tendency and measures of variability (spread).

For **example**, it would not be useful to know that all of the participants in our **example** wore blue shoes. ... Central tendency describes the central point in a data set. Variability describes the spread of the data

Define running record?

Files or existing statistical documents maintained by organizations. Vital statistics.

Difference between references and bibliography?

A **bibliography** is the listing of the works that are relevant to the topic of research interest arranged in alphabetical order of the last names of authors.

• A **reference** list is a subset of the bibliography, which includes details of all the citations used in the literature survey and elsewhere in the report, arranged again, in the alphabetical order of the last names of authors.

What is research?

Gathering information needed to answer a question, and thereby help in solving a problem. ☐ Systematic and organized effort to investigate

3 Marks Questions

Difference between survey interview and field research interview?

Survey Interview: It has a clear beginning and end. • The same standard questions are asked and in same sequence. • Interviewer appears neutral at all times. Interviewer asks questions, and the respondent answers. • It is almost always with one respondent alone. Professional tone and business like focus; diversions ignored. • Closed ended Qs are common; rare probes. • Interviewer controls the pace and direction of interview. Social context of interview is ignored and assumed to make no difference. • Interviewer attempts to mold the communication in a standard framework.

FR Interview: The beginning and end are not clear. • Questions and order are tailored to specific people and situations. • Interviewer shows interest in responses, encourages elaboration. It is like a friendly conversational exchange, with more interviewer questions. • It can occur in group setting or with others in area. Interspersed with jokes, stories, diversions. • Open ended Qs are common; probes frequent. • Interviewer and member jointly control the pace and direction of interview. Social context of interview is noted and seen as important for interpreting the meaning or responses. • Interviewer adjusts to member's norms and language usage.

Enlist 6 features of theoretical framework?

1. Make an inventory of variables
2. Specify the direction of relationship
3. Logic for the proposed relationship
4. Make an inventory of propositions
5. Arrange propositions sequentially
6. Present schematic diagram

Enlist parts of main body of report?

□ Introduction: □ -- Background □ -- Objectives □ Methodology. □ Results ◇ can be divided into different areas. □ Limitations. □ Conclusions and recommendations □ References. □ Acknowledgements.

Appended parts □ Data collection forms (questionnaires, check list, interview guide, other forms). □ Detailed calculations. □ General tables. □ Other support material. □ Bibliography, if needed. **(may be this one right)**

Difference between ethnography and phenomenology?

Phenomenology: A phenomenological study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon. □ The basic purpose of phenomenology is to reduce individual experiences with a phenomenon to a description of the universal essence.

Ethnography: Ethnography is a qualitative design in which the researcher describes and interprets the shared and learned patterns of values, behaviors, beliefs, and language of a culture-sharing group (Harris, 1968). □ An ethnography focuses on an entire cultural group which may be small, but typically it is large, involving many people who interact over time □ 'ethnography involves extended observations of the group, most often through participant observation.

Difference between scale and index?

Scale is a measure to capture the intensity, direction, level, or potency of a variable. Arranges responses on a continuum. A scale can use single indicator or multiple indicators. Ordinal level.

Index is a measure in which researcher adds or combines several distinct indicators of a construct into a single score. Composite score.

Difference between participant observation and non-participant observation?

Participant Observation • Participant observation is immersion in a culture. Ideally, the ethnographer lives and works in the community for six months to a year or more, learning the language and seeing patterns of behaviour over time. Long-term residence helps the researcher internalize the basic beliefs, fears, hopes and expectations of the people under study. (1989:45)

Nonparticipant Observation • Interviewing is trying to understand what people think through their speech. • Types of interviewing: • informal interviewing, • unstructured interviewing, • semi-structured interviewing, and • formally structured interviewing.

Differentiate between narrative research and phenomenological research?

Narrative research • "Narrative is understood as a spoken or written text giving an account of an event/action or series of events/actions, chronologically connected". • The procedures for implementing this research consist of focusing on studying one or two individuals, gathering data through the collection of their stories, reporting individual experiences, and chronologically ordering (or using life course stages) the meaning of those experiences.

A **phenomenological** study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon. • The basic purpose of phenomenology is to reduce individual experiences with a phenomenon to a description of the universal essence.

Differentiate between critical & realistic ethnography?

The **realist** ethnography is a traditional approach used by cultural anthropologists. It reflects a particular stance taken by the researcher toward the individuals being studied •

The **critical** ethnography involves the authors advocate for the emancipation of groups marginalized in society.

Challenges in implementing case study?

the difficulties associated with the implementation of the case-study method as a pedagogic tool. To ensure the validity of the sources are most of them are peer reviewed, which is an accepted method in the scientific community. This method ensures that the information is correct and that the conclusions of the source has been audited and accepted by an independent peer **(Internet)**

What are the limitations of focused group discussion?

Observe verbal as well non-verbal communication. What are they saying? What does it mean to them? Empathize. □ Do not try to comment on everything that is said □ Control the timings unobtrusively. □ Summarize the main issues at the end of FGD. □ Check whether all participants agree. □ Thank the participants. □ Listen for the added comments after meeting has closed.

What questions are arises in research mind while making evidence quality in comparative historical research? 3

?????

Main body of report?

□ Introduction: □ -- Background □ -- Objectives □ Methodology. □ Results ◇can be divided into different areas. □ Conclusions and recommendations □ Acknowledgements. □ Limitations □ References.

Constitutes the bulk of the report. It includes: Introduction, methodology, results, and limitations of the study. It finishes with conclusions and recommendations based on results.

5 Marks Question

Difference between cross sectional and longitudinal studies?

Longitudinal studies differ from one-off, or **cross-sectional studies**. The main difference is that **cross-sectional studies** interview a fresh sample of people each time they are carried out, whereas **longitudinal studies** follow the same sample of people over time.

What questions are arises in researcher mind while making evidence quality in comparative? ????

Write the procedure of implementation in narrative research?

1. Determine if the research problem or question best fits narrative research. Narrative research is best for capturing the detailed stories or life experiences of a single life or the lives of a small number of individuals.
2. Select one or more individuals who have stories or life experiences to tell, and spend considerable time with them gathering their stories through multiples types of information.
3. Collect information about the context of these stories. Narrative researchers situate individual stories within participants' personal experiences (their jobs, their homes), their culture (racial or ethnic), and their historical contexts (time and place).
4. Analyze the participants' stories, and then "restore" them into a framework that makes sense. Restoring is the process of reorganizing the stories into some general type of framework.
5. Collaborate with participants by actively involving them in the research. As researchers collect stories, they negotiate relationships, smooth transitions, and provide ways to be useful to the participants..

Differentiate between quantitative research and qualitative research?

Quantitative research:

Quantitative research, on the other hand, explores descriptive analysis of characteristics through variables or answers questions about the relationships among variables. • Quantitative research studies generally end with a summation of the verification process, which is a confirmation or disconfirmation of the hypotheses tested via deductive reasoning. • Conclusively, the aim of qualitative research is discovery, while the aim of quantitative research is verification

Qualitative research: To gain an in depth understanding and explanation of some particular social phenomenon. The data collection is done by interviewing; however, an understanding of the social phenomenon and personal lived experiences of individuals might be gained via non-intrusive qualitative approaches in which the researcher might use texts, journals, written narratives or observations. • Qualitative research questions begin with "How?" and/or "Why?" questions, but can begin with a "What?" question as well.

What points should be kept in mind while presenting a table to one's research?

Typically, these images are too small, too detailed and too textual for an effective visual **presentation**. The same is true for font size; 12 **point** font is adequate **when** the text is in front of you. In a slideshow, aim for a minimum of 40 **point** font. Remember the audience and move the circle from “me” to “we.” **(Internet)**

What is focus group discussion? write the purpose of FGD?

The purpose of FGD: ☐ To obtain in-depth information on concepts, perceptions, and ideas of the group. ☐ More than an question-answer interaction. ☐ Group members discuss the topic among themselves.

Function of recorder in focus group discussion? 5 also repeat in 10 Marks?

Functions of the Recorder ☐ Keep a record of the content as well as emotional reactions and nature of group interactions. ☐ Record the following: - Date, time, and place. - Names and characteristics of participants. - Description of group dynamics (level of participation, presence of a dominant participant, level of interest). - Opinions of the participants, as far as possible in their own words, especially the key statements. - Emotional aspects (reluctance, strong feelings attached to certain opinions). - Vocabulary used. ☐ Assist the facilitator by drawing his/her attention to missed topics or missed comments from the participants. Help the facilitator resolve the conflict if necessary. Make sure a copy of the list of topics and key probe questions is available and referred to during the FGD.

10 Marks Question

Role of recorder in FGD 10 marks

Functions of the Recorder ☐ Keep a record of the content as well as emotional reactions and nature of group interactions. ☐ Record the following: - Date, time, and place. - Names and characteristics of participants. - Description of group dynamics (level of participation, presence of a dominant participant, level of interest). - Opinions of the participants, as far as possible in their own words, especially the key statements. - Emotional aspects (reluctance, strong feelings attached to certain opinions). - Vocabulary used. ☐ Assist the facilitator by drawing his/her attention to missed topics or missed comments from the participants. Help the facilitator resolve the conflict if necessary. Make sure a copy of the list of topics and key probe questions is available and referred to during the FGD.

What is running record? (Marks not confirm)

Running Records ☐ Files or existing statistical documents maintained by organizations. Vital statistics.
