MCQS

1. What is the primary purpose of a database management system (DBMS)?

- a) Store data
 - b) Manage user permissions
 - c) Retrieve data
 - d) Manage and control data storage and retrieval
- Answer: d) Manage and control data storage and retrieval

2. Which of the following is an example of a non-relational database?

- a) MySQL
 - b) Oracle
 - c) MongoDB
 - d) PostgreSQL
- Answer: c) MongoDB

3. Which type of SQL constraint ensures that all values in a column are unique?

- a) PRIMARY KEY
 - b) FOREIGN KEY
 - c) UNIQUE
 - d) CHECK
- Answer: c) UNIQUE

4. In which normal form is a relation free from partial dependency?

- a) First Normal Form (1NF)
 - b) Second Normal Form (2NF)
 - c) Third Normal Form (3NF)
 - d) Boyce-Codd Normal Form (BCNF)
- Answer: b) Second Normal Form (2NF)

5. Which of the following is used to join two tables in SQL?

- a) JOIN
 - b) LINK
 - c) RELATE
 - d) CONNECT
- Answer: a) JOIN

6. In an entity-relationship diagram, what symbol represents a relationship?

- a) Oval
- b) Diamond
- c) Rectangle
- d) Ellipse

Answer: b) Diamond

7. Which of the following is the main function of the Database Management System (DBMS) software?

- a) Data backup
- b) Data storage
- c) Data retrieval
- d) Data insertion

Answer: b) Data storage

8. Which of the following is the correct sequence of steps in database design?

- a) Conceptual design → Logical design → Physical design
- b) Logical design → Conceptual design → Physical design
- c) Physical design → Conceptual design → Logical design
- d) Physical design → Logical design → Conceptual design

Answer: a) Conceptual design → Logical design → Physical design

9. Which normalization form removes transitive dependencies?

- a) 1NF
- b) 2NF
- c) 3NF
- d) BCNF

Answer: c) 3NF

10. What is the main advantage of using indexes in databases?

- a) Decrease storage requirements
- b) Improve query performance
- c) Increase complexity
- d) Ensure data consistency

Answer: b) Improve query performance

11. Which of the following SQL clauses is used to filter results based on a condition?

- a) WHERE
- b) ORDER BY
- c) GROUP BY
- d) HAVING

Answer: a) WHERE

12. What is the function of a foreign key in relational databases?

- a) To enforce data integrity between two tables
- b) To create a primary key
- c) To store unique data
- d) To define a relationship between fields

Answer: a) To enforce data integrity between two tables

13. Which SQL statement is used to delete data from a table?

- a) REMOVE
- b) DELETE
- c) DROP
- d) CLEAR

Answer: b) DELETE

14. Which of the following is NOT a feature of relational databases?

- a) Tables
- b) Columns
- c) Records
- d) Objects

Answer: d) Objects

15. In a relational database, which of the following refers to a unique identifier for each record?

- a) Column
- b) Field
- c) Primary key
- d) Attribute

Answer: c) Primary key

16. Which database model stores data in the form of graphs, using nodes, edges, and properties?

- a) Relational model**
- b) Hierarchical model**
- c) Network model**
- d) Graph model**

Answer: d) Graph model

17. What is the primary function of the Data Definition Language (DDL) in SQL?

- a) Manage transactions**
- b) Query and retrieve data**
- c) Define database structures**
- d) Modify data**

Answer: c) Define database structures

18. Which of the following is true about views in SQL?

- a) Views can store data permanently**
- b) Views can improve query performance**
- c) Views are a physical copy of the data**
- d) Views cannot be queried directly**

Answer: b) Views can improve query performance

19. What is the purpose of the ACID properties in a database system?

- a) To ensure data security**
- b) To ensure data consistency and reliability**
- c) To manage data recovery**
- d) To define query processing strategies**

Answer: b) To ensure data consistency and reliability

20. Which of the following is a characteristic of the cloud database?

- a) It is stored on physical servers in a local network**
- b) It is managed by the user**
- c) It is accessible remotely via the internet**
- d) It is not scalable**

Answer: c) It is accessible remotely via the internet

21. Which SQL command is used to modify the data in an existing table?

- a) UPDATE
- b) MODIFY
- c) CHANGE
- d) ALTER

Answer: a) UPDATE

22. What is the primary role of the Data Manipulation Language (DML) in SQL?

- a) Define database schema
- b) Modify and query data
- c) Define constraints
- d) Manage transactions

Answer: b) Modify and query data

23. Which type of join returns all records from the left table and only matching records from the right table?

- a) INNER JOIN
- b) LEFT JOIN
- c) RIGHT JOIN
- d) FULL JOIN

Answer: b) LEFT JOIN

24. Which of the following ensures that a database is free of redundant data?

- a) Normalization
- b) Indexing
- c) Data mining
- d) Data replication

Answer: a) Normalization

25. What does the SQL command DROP TABLE do?

- a) Deletes all rows in a table
- b) Deletes the structure and data of the table
- c) Deletes the data but retains the structure
- d) Deletes the primary key constraint

Answer: b) Deletes the structure and data of the table

26. Which SQL command is used to create a new database?

- a) CREATE DATABASE**
- b) NEW DATABASE**
- c) INIT DATABASE**
- d) SET DATABASE**

Answer: a) CREATE DATABASE

27. In which scenario is a database in the third normal form (3NF)?

- a) It has no transitive dependencies**
- b) It has no partial dependencies**
- c) It is free from redundancy**
- d) It has no partial or transitive dependencies**

Answer: d) It has no partial or transitive dependencies

28. Which type of database management system uses a tree-like structure to represent the relationship between data elements?

- a) Relational DBMS**
- b) Hierarchical DBMS**
- c) Network DBMS**
- d) Object-oriented DBMS**

Answer: b) Hierarchical DBMS

29. Which of the following refers to the property of a transaction in which all changes made by the transaction are either fully committed or fully rolled back?

- a) Atomicity**
- b) Consistency**
- c) Isolation**
- d) Durability**

Answer: a) Atomicity

30. What is the main advantage of using a stored procedure in a database?

- a) It speeds up query processing**
- b) It simplifies complex queries and enhances security**
- c) It reduces the need for indexes**
- d) It stores data permanently**

Answer: b) It simplifies complex queries and enhances security

31. What is the purpose of an index in a database?

- a) To provide a backup for the database
- b) To store additional data for queries
- c) To improve the speed of data retrieval
- d) To enforce constraints on data

Answer: c) To improve the speed of data retrieval

32. Which of the following is an example of a NoSQL database?

- a) Oracle
- b) SQL Server
- c) MongoDB
- d) PostgreSQL

Answer: c) MongoDB

33. Which of the following is a characteristic of the Entity-Relationship (ER) model?

- a) It is used for query processing
- b) It models the relationship between entities in a graphical form
- c) It stores data in a tabular format
- d) It is a physical model

Answer: b) It models the relationship between entities in a graphical form

34. Which of the following is a typical use of a foreign key in relational databases?

- a) To uniquely identify each record in a table
- b) To link two tables based on a common attribute
- c) To store a large amount of data
- d) To delete records from a table

Answer: b) To link two tables based on a common attribute

35. Which of the following is NOT an example of a data type in SQL?

- a) VARCHAR
- b) INT
- c) BOOLEAN
- d) SET

Answer: d) SET

36. In the context of database normalization, what is a functional dependency?

- a) A relationship where a field's value depends on another field
- b) A dependency where the data is divided into multiple tables
- c) A method of indexing tables
- d) A dependency that removes redundancy

Answer: a) A relationship where a field's value depends on another field

37. What is the purpose of the GROUP BY clause in SQL?

- a) To filter rows based on a condition
- b) To combine rows into summary data
- c) To arrange the results in ascending order
- d) To update existing records

Answer: b) To combine rows into summary data

38. Which of the following is a feature of the NoSQL database?

- a) They support complex queries with joins
- b) They store data in tables with fixed schemas
- c) They provide high scalability and flexibility
- d) They use SQL for data manipulation

Answer: c) They provide high scalability and flexibility

39. What is the primary purpose of the normalization process?

- a) To increase the speed of data retrieval
- b) To eliminate redundant data
- c) To ensure data consistency across tables
- d) To design physical storage of data

Answer: b) To eliminate redundant data

40. Which SQL command is used to remove a column from an existing table?

- a) REMOVE COLUMN
- b) DROP COLUMN
- c) DELETE COLUMN
- d) ALTER COLUMN

Answer: b) DROP COLUMN

41. What does the term "referential integrity" refer to in relational databases?

- a) Ensuring that primary keys are unique
- b) Ensuring that foreign keys in a table match primary keys in another table
- c) Ensuring that there are no redundant data entries
- d) Ensuring that data is stored in an optimized format

Answer: b) Ensuring that foreign keys in a table match primary keys in another table

42. Which SQL clause is used to remove duplicate rows from the result set?

- a) DISTINCT
- b) UNIQUE
- c) GROUP BY
- d) REMOVE

Answer: a) DISTINCT

43. Which of the following is a type of database model?

- a) Relational model
- b) Mathematical model
- c) Logical model
- d) Abstract model

Answer: a) Relational model

44. Which SQL keyword is used to sort the result set in either ascending or descending order?

- a) ORDER
- b) SORT
- c) GROUP
- d) ORDER BY

Answer: d) ORDER BY

45. Which of the following is true about a primary key in a table?

- a) It can contain NULL values
- b) It can be duplicated
- c) It uniquely identifies each record in a table
- d) It is optional

Answer: c) It uniquely identifies each record in a table

46. Which of the following is the correct syntax to create a table in SQL?

- a) CREATE TABLE table_name (column1 datatype, column2 datatype);
- b) CREATE TABLE (table_name column1 datatype, column2 datatype);
- c) CREATE table_name (column1 datatype, column2 datatype);
- d) CREATE table (column1 datatype, column2 datatype);

Answer: a) CREATE TABLE table_name (column1 datatype, column2 datatype);

47. What is a 'self-join' in SQL?

- a) Joining two tables based on a related column
- b) Joining a table to itself
- c) Joining multiple tables using primary keys
- d) Joining tables from different databases

Answer: b) Joining a table to itself

48. What is the result of a SQL INNER JOIN?

- a) All records from both tables are included in the result set
- b) All records from the first table and matching records from the second table are included
- c) Only matching records from both tables are included
- d) Only records that exist in the first table are included

Answer: c) Only matching records from both tables are included

49. What is the purpose of a 'view' in SQL?

- a) To store data permanently
- b) To create a backup of a table
- c) To present data in a specific format without modifying the underlying tables
- d) To optimize queries

Answer: c) To present data in a specific format without modifying the underlying tables

50. Which of the following refers to the concept of 'data redundancy' in databases?

- a) Storing the same data in multiple tables unnecessarily
- b) Storing unique data values in a single table
- c) Creating backup copies of data
- d) Compressing data for efficient storage

Answer: a) Storing the same data in multiple tables unnecessarily

51. Which SQL command is used to change the structure of an existing table?

- a) MODIFY**
- b) ALTER**
- c) CHANGE**
- d) UPDATE**

Answer: b) ALTER

52. Which type of dependency exists when one column depends on another for its value, but not for its key?

- a) Functional dependency**
- b) Partial dependency**
- c) Transitive dependency**
- d) Multivalued dependency**

Answer: b) Partial dependency

53. Which of the following is a characteristic of the Entity-Relationship (ER) model?

- a) It defines the physical storage structure of data**
- b) It is used for data manipulation**
- c) It is used to design the logical structure of a database**
- d) It directly interacts with end users**

Answer: c) It is used to design the logical structure of a database

54. In database design, what is meant by 'cardinality'?

- a) The number of rows in a table**
- b) The number of columns in a table**
- c) The relationship between two entities in terms of quantity**
- d) The size of a database**

Answer: c) The relationship between two entities in terms of quantity

55. Which of the following is an example of a data type in SQL for storing floating-point numbers?

- a) INT**
- b) TEXT**
- c) DECIMAL**
- d) FLOAT**

Answer: d) FLOAT

Mcqs

Final term preparation

ZB

56. What does the term 'denormalization' refer to?

- a) The process of removing redundant data from the database
- b) The process of combining multiple tables into one
- c) The process of restructuring data to optimize query performance
- d) The process of adding redundant data for improved performance

Answer: d) The process of adding redundant data for improved performance

57. Which of the following is a characteristic of 'ACID' properties in database management?

- a) Atomicity ensures that data is always accessible
- b) Consistency ensures that data is accurately replicated
- c) Isolation ensures that transactions do not interfere with each other
- d) Durability ensures that data is never deleted

Answer: c) Isolation ensures that transactions do not interfere with each other

58. Which of the following is the correct definition of a 'subquery' in SQL?

- a) A query that is nested inside another query
- b) A query that is executed after the main query
- c) A query that retrieves data from multiple tables simultaneously
- d) A query that updates data in a table

Answer: a) A query that is nested inside another query

59. What does the SQL BETWEEN operator do?

- a) Filters the results based on a range of values
- b) Filters the results for exact matches only
- c) Joins two tables based on a specified condition
- d) Groups results by a specific column

Answer: a) Filters the results based on a range of values

60. Which of the following is an example of a database trigger?

- a) A stored procedure that inserts data into a table
- b) A query that automatically updates records based on a condition
- c) A function that calculates values
- d) A rule that is activated by specific events such as insert, update, or delete

Answer: d) A rule that is activated by specific events such as insert, update, or delete

61. What is the purpose of the HAVING clause in SQL?

- a) To filter records before grouping
- b) To filter records after grouping
- c) To sort records in ascending order
- d) To create subqueries

Answer: b) To filter records after grouping

62. Which of the following is NOT a type of database constraint?

- a) UNIQUE
- b) FOREIGN KEY
- c) DISTINCT
- d) PRIMARY KEY

Answer: c) DISTINCT

63. Which of the following is true about a 'composite key'?

- a) It is composed of a single column
- b) It is composed of two or more columns
- c) It is used for indexing only
- d) It is created automatically by the DBMS

Answer: b) It is composed of two or more columns

64. Which SQL statement is used to add a column to an existing table?

- a) ADD COLUMN
- b) INSERT COLUMN
- c) ALTER TABLE
- d) MODIFY COLUMN

Answer: c) ALTER TABLE

65. Which of the following is the correct SQL syntax to select all columns from a table named Customers?

- a) SELECT * FROM Customers;
- b) SELECT ALL FROM Customers;
- c) SELECT COLUMNS FROM Customers;
- d) SELECT EVERY COLUMN FROM Customers;

Answer: a) SELECT * FROM Customers;

61. What is the purpose of the HAVING clause in SQL?

- a) To filter records before grouping
- b) To filter records after grouping
- c) To sort records in ascending order
- d) To create subqueries

Answer: b) To filter records after grouping

62. Which of the following is NOT a type of database constraint?

- a) UNIQUE
- b) FOREIGN KEY
- c) DISTINCT
- d) PRIMARY KEY

Answer: c) DISTINCT

63. Which of the following is true about a 'composite key'?

- a) It is composed of a single column
- b) It is composed of two or more columns
- c) It is used for indexing only
- d) It is created automatically by the DBMS

Answer: b) It is composed of two or more columns

64. Which SQL statement is used to add a column to an existing table?

- a) ADD COLUMN
- b) INSERT COLUMN
- c) ALTER TABLE
- d) MODIFY COLUMN

Answer: c) ALTER TABLE

65. Which of the following is the correct SQL syntax to select all columns from a table named Customers?

- a) SELECT * FROM Customers;
- b) SELECT ALL FROM Customers;
- c) SELECT COLUMNS FROM Customers;
- d) SELECT EVERY COLUMN FROM Customers;

Answer: a) SELECT * FROM Customers;

71. Which of the following is a characteristic of the OLAP database?

- a) It supports online transactional processing
- b) It supports analytical querying and reporting
- c) It is designed for real-time data entry
- d) It is optimized for relational queries

Answer: b) It supports analytical querying and reporting

72. Which of the following is a feature of a cloud-based database?

- a) It is stored on physical servers
- b) It provides remote access over the internet
- c) It requires manual backup management
- d) It does not support scalability

Answer: b) It provides remote access over the internet

73. Which of the following is the default sorting order when using the ORDER BY clause in SQL?

- a) Descending
- b) Ascending
- c) Random
- d) Alphabetical

Answer: b) Ascending

74. Which of the following is an example of an SQL aggregate function?

- a) MAX
- b) JOIN
- c) SELECT
- d) UNION

Answer: a) MAX

75. In the context of relational databases, what does 'CRUD' stand for?

- a) Create, Read, Update, Delete
- b) Collect, Retrieve, Update, Delete
- c) Create, Read, Unify, Delete
- d) Collect, Read, Update, Data

Answer: a) Create, Read, Update, Delete

Mcqs**Final term preparation**

76. Which of the following best defines 'data redundancy'?

- a) A method of normalizing data
- b) Storing the same data in multiple places
- c) Encrypting data for security
- d) Storing data in a single, secure location

Answer: b) Storing the same data in multiple places

77. Which of the following is a reason for denormalizing a database?

- a) To reduce the complexity of queries
- b) To remove data redundancy
- c) To enforce referential integrity
- d) To improve data consistency

Answer: a) To reduce the complexity of queries

78. Which of the following SQL operators is used to match a pattern in a WHERE clause?

- a) LIKE
- b) IN
- c) BETWEEN
- d) EXISTS

Answer: a) LIKE

79. What is the main purpose of the SQL EXISTS operator?

- a) To check if a column has a NULL value
- b) To check if a subquery returns any rows
- c) To check for duplicate rows in a result set
- d) To return a subset of the rows

Answer: b) To check if a subquery returns any rows

80. Which of the following SQL clauses is used to filter records based on an aggregate function?

- a) WHERE
- b) HAVING
- c) GROUP BY
- d) SELECT

Answer: b) HAVING

81. Which of the following ensures that a database transaction is completed entirely or not at all?

- a) Durability
- b) Consistency
- c) Atomicity
- d) Isolation

Answer: c) Atomicity

82. Which of the following is true for an AUTO_INCREMENT field in SQL?

- a) It is used to store only numerical values
- b) It automatically generates a unique value when a new record is inserted
- c) It is used for primary keys only
- d) It is always required in a table

Answer: b) It automatically generates a unique value when a new record is inserted

83. Which SQL clause is used to retrieve a subset of records from a table based on a specified condition?

- a) SELECT
- b) WHERE
- c) ORDER BY
- d) GROUP BY

Answer: b) WHERE

84. What does the SQL COALESCE() function do?

- a) Returns the first non-NULL value in a list of expressions
- b) Converts all NULL values to zeros
- c) Calculates the sum of all non-NULL values
- d) Removes NULL values from the result set

Answer: a) Returns the first non-NULL value in a list of expressions

85. Which of the following is an example of a constraint used in SQL?

- a) JOIN
- b) UNION
- c) NOT NULL
- d) IN

Answer: c) NOT NULL

Mcqs

Final term preparation

86. Which type of relationship does a foreign key in a database establish?

- a) A one-to-one relationship
- b) A one-to-many relationship
- c) A many-to-many relationship
- d) It does not establish any relationship

Answer: b) A one-to-many relationship

87. Which SQL command is used to retrieve data from a database?

- a) SELECT
- b) UPDATE
- c) INSERT
- d) DELETE

Answer: a) SELECT

88. What is a 'normalized' database?

- a) A database that has redundant data to improve performance
- b) A database that is designed to minimize data redundancy
- c) A database with complex relationships
- d) A database that does not contain any relationships

Answer: b) A database that is designed to minimize data redundancy

89. Which of the following SQL clauses is used to group rows that have the same values in specified columns?

- a) GROUP BY
- b) ORDER BY
- c) HAVING
- d) SELECT

Answer: a) GROUP BY

90. Which of the following is NOT a valid data type in SQL?

- a) INTEGER
- b) TEXT
- c) VARCHAR
- d) BOOLEAN

Answer: d) BOOLEAN

91. What is the purpose of the DISTINCT keyword in SQL?

- a) To sort the result set in ascending order
- b) To filter duplicate rows from the result set
- c) To join multiple tables together
- d) To calculate aggregate values

Answer: b) To filter duplicate rows from the result set

92. Which of the following is the primary goal of database normalization?

- a) To speed up the performance of queries
- b) To reduce data redundancy and improve data integrity
- c) To create complex queries
- d) To store all data in one table

Answer: b) To reduce data redundancy and improve data integrity

93. What does the term "referential integrity" refer to in a database?

- a) Ensuring that all primary keys are unique
- b) Ensuring that foreign keys are properly linked to primary keys in related tables
- c) Ensuring that there are no NULL values in a table
- d) Ensuring that data is stored in a normalized form

Answer: b) Ensuring that foreign keys are properly linked to primary keys in related tables

94. Which of the following is true for a RIGHT JOIN in SQL?

- a) It returns only rows from the right table that have matching rows in the left table
- b) It returns all rows from the right table and the matching rows from the left table
- c) It returns all rows from both tables
- d) It returns only rows where the left and right tables have matching records

Answer: b) It returns all rows from the right table and the matching rows from the left table

95. What is a 'view' in a database?

- a) A physical table that stores data
- b) A query that presents data from one or more tables
- c) A backup of a table
- d) A way to improve the performance of queries

Answer: b) A query that presents data from one or more tables

Midterm important topics from lectures 1 to 22

- 1. Information Systems: Types of information systems (TPS, DSS, etc.), components, and their role in businesses.**
- 2. Business Processes: Understanding how business processes are automated and the role of ERP systems.**
- 3. Technology Infrastructure: Hardware, software, networking, cloud computing, and cybersecurity concepts.**
- 4. E-commerce & Digital Transformation: Trends in e-commerce, digital business models, and the impact of digital technologies.**
- 5. Data Management & Analytics: Data types, data warehouses, big data, and business intelligence.**
- 6. Emerging Technologies: AI, IoT, blockchain, and how these technologies are affecting businesses.**
- 7. Project Management: Agile vs. Waterfall methodologies, key project management processes.**
- 8. IT Strategy: Aligning IT with business goals and managing IT investments.**

9. Systems Development Life Cycle (SDLC): Phases of SDLC, methodologies like Agile, Waterfall, and their application in software development.

10. Cybersecurity and Risk Management: Security policies, common threats, encryption, and strategies for managing cybersecurity risks in businesses.

11. Cloud Computing: Types of cloud services (IaaS, PaaS, SaaS), benefits, challenges, and popular cloud platforms.

12. IT Governance and Compliance: Frameworks like COBIT, ITIL, and the importance of regulatory compliance (GDPR, HIPAA).

13. Enterprise Resource Planning (ERP): Key ERP systems, benefits and challenges of ERP implementation, and how ERP integrates business functions.

14. IT Outsourcing and Offshoring: Reasons for outsourcing, managing outsourcing contracts, and the pros and cons of offshoring.

15. Business Continuity and Disaster Recovery: Planning for business continuity, disaster recovery strategies, and risk assessments.

16. Techniques for Business Problem Solving: Methods like data analysis, decision-making models, and the application of technology to solve business problems.

Passing criteria of this course

Letter Grade	Grade Points	Equivalent Percentage
A+	4.00	90-100
A	4.00	85-89
A-	3.66 - 3.99	80-84
B+	3.33 - 3.65	75-79
B	3.00 - 3.32	71-74
B-	2.66 - 2.99	68-70
C	2.00 - 2.65	61-67
D	1.00 - 1.99	50-60
F	0.00	00-49

Passing Criteria for a Course:

The passing criteria is defined in such a way that it ensures the student shall be consistent in his studies throughout the semester.

Therefore, for passing a course/subject, student shall fulfill the following:

- Secure minimum **20%** score in Formative Assessments/Mid terms
- Secure minimum **20%** score in Final Term Examinations.
- Secure at least **40%** marks in aggregate while fulfilling the above requirements

Course Selection and Credit Hours

Q: How do I select courses when the course selection is open?

A: Follow these steps:

- 1. Check the credit hours allowed by your university (e.g., 21, 18, or 15 credit hours).**
- 2. Each subject typically has 3 credit hours.**
- 3. Divide the total allowed credit hours by 3 to determine how many subjects you can select.**

Examples:

21 credit hours = 7 subjects

15 credit hours = 5 subjects

Remember, the university may allow different credit hours for each student, so check your specific allowance.

By following these steps, you can make informed decisions during course selection and manage your credit hours effectively.

Advice

Hmaesha relax ho ke parha kryn panic mat hua kryn apky parents ky bohat khawab hoty hn wo pura krny ki puri koshish kea kryn kbi b ksi pe depend na kea kryn apko bs ak insan success kr saqta ha or wo insan ap khud hn apky elawa koi nahe ap bs koshish kryn Allah pak pe strong yakeen rakha kryn or mehnat krke sb Allah ke hawaly kr dea kryn everything is possible be brave be strong stay blessed

Hum insan hamesha moat se darty or bhagty hn or moat se bachny ki koshish krty hn jabke moat ny ana hi ana ha hum

moat se nahe bach saqty humy jahanam se bachny ki koshish
krni chaheay hum jahanam se bach saqty hn
Insan ko 3 chezo se dar lagta ha Moat Risk/Dolat Ezat Shohrat
Fame

Moat

**Humy pta hona chaheay Moat tab ani ha jab Allah
chahy us se pehly puri dunya bi ak taraf ho ke apko
marna chahy to apka kuch nahe beggar saqti**

Risk/Dolat

**Risk Dolat sb Allah pak ke hath m ha puri dunya ak
taraf b ho jay na apsy apka risk cheen saqti ha na de
saqti ha Ye sirf ALLAH pak ky hath m ha**

Izat Zilat shohrat Fame

**Izat Zilat Sirf Allah de saqty hn puri dunya mel ke b
apko zra brabr b damage nahe kr saqti Agr ALLAH**

**Apko izat dena chahay to puri dunya ak taraf ho ke
b apko 1% b nuksan nahe pohancha saqti**

Phr Dar ks bat ka ????????????????

**Be brave be strong Just put your trust To ALLAH
Hamesha Confident or himat se raho kbi ksi k samne
mat jhuko puri dunya mel k b apka kuch b nahe
beggar saqti**

Tips

Payary Students kbi b Only files pe depend mat kea kryn just files read krke uspe total depend krna it's not Good Vu ke tamat Papers Conceptual hoty hn Agr apky concepts

Apny concepts clear kryn or handout ko read kryn

Agr Handouts lengthy

Lgy to Ap har topics Ki basic definitions dekh lea kryn or headings dekh leay kryn

Ap thori se mehnat Kryn bs ap kbi b fail nahe hongy jab himat haar jao to un maa baap k bare m socha kro Jo apki fees dete hn jinko ap pe bohat dawy hn Jo har jga kehty hn Hamara bacha university Mai parh rha ha un maa baap ki umeedy Kahi mat Tory apny kea naa Sahi apny maa baap k leay mehnat kro himat kro Everything is possible just do it my Family

Apko Kuch b samj naa ay yaa ap Kuch b pochna chahy to ap mujsy contact kr saqty hn
