

Educational psychology: Educational psychology is the branch of psychology, concerned with the scientific study of human learning.

What do you know about demonstrating as a teaching strategy-?

Demonstrating is the process of teaching through examples or experiments. For example, a science teacher may teach an idea by performing an experiment for students. A demonstration may be used to prove a fact through a combination of visual evidence and associated reasoning.

How peer relationship affects our moral development lesson#8

Another important fact related to moral development is the effect of peer relationships. Children develop their moral standards by observing their peer groups and other significant others.

Write 2 areas of research for educational psychology and identify dependent and independent variable in them

1) Descriptive Studies, 2) Correlational Studies, 3) Experimental Studies

Jean Piaget's Theory of Cognitive Development lesson#5

Jean Piaget's a great name in psychology and in particular for his description of children's thinking. He put forward the view that there are four stages in the development of a child's thinking and they are:

- 1) Sensorimotor Stage, (0-2)
- 2) Preoperational Stage, (2-7)
- 3) Concrete Operational Stage, (7-11)
- 4) Formal Operational Stage (11 - adulthood)

Amna and her sister are playing. Amna is pretending to be a doctor and her sister patient. What Piaget's stages they both attained explain answer with justification?

This statement is refers to Concrete Operational Stage, (7-11), in this stage the child learns the rules such as conversation

Describe the forms of negative label, explain with the examples

Stigmatization and Self-fulfilling prophecy

Self-fulfilling prophecy that is a judgment or prediction which comes out to be true, If a teacher regards a child to less intelligent, he pays less attention to him and as a result of receiving less attention the child lags behind in academics thus providing proof to the teacher that the student indeed is not a good student.

Stigmatization: A stigma is a bad name, a negative label; a name which describes the protagonist in uncomplimentary manner

Labeling the students? Lesson#11

Teachers should be very careful in labeling a student of victim of any learning disability as it is a very serious issue. Such labeling can be harmful for students. It could have a very bad influence on students. This harm may come from two sources; 1) One it stigmatizes a student 2) It may become a self-fulfilling prophecy.

Intelligence and logic intelligence inherited (میں وراثت) OR acquire (حاصل) lesson#10

Intelligence and logic intelligence are basically acquired; approximately 80% of child's intelligence is acquired from mother.

Orderly, continues and gradual development principle lesson#4

Continuous development: There are individual differences across people in terms of development. For example, there are gender differences in physical development.

Orderly development: That development takes in an orderly path: for example, children first sit, then develop an ability to stand and then to walk etc.

Gradual development: That development takes place gradually, not suddenly. For example, a seed turns into a tree over some period of time.

Stages of Development: lesson#7

There are two stages of development: Physical and psychological

Stages of development crisis given by Erick Ericson: Trust versus Mistrust Stage, Autonomy versus Doubt/Shame Stage, Initiative and Guilt Stage, Industry versus Inferiority Stage, Identity versus Role Confusion Stage, Intimacy versus Isolation Stage, Generatively versus Stagnation Stage, Ego integrity versus Despair Stage.

Kohlberg's Levels of Development: 1. Pre-conventional Moral Reasoning, 2. Conventional Moral Reasoning, 3. Post-Conventional Moral Reasoning

Dialect and bilingualism lesson#15

Dialect: A dialect is a language variation spoken by a particular ethnic, social or regional group and is an element of the group's collective identity.

Bilingualism: A large majority of our school going children are bilingual, learning, speaking and reading in at least two languages, namely Urdu and English.

Who are those students who take benefit from token economy?

Students with mental retardation, children who have failed often, children with few academic skills and students with behavior problems all seem to respond to the concrete, direct nature of token reinforcement.

Development of Erikson lesson#8

According to Erikson's theory is called the ego integrity versus despair stage. In this period, late adulthood stage, the person must reflect upon his past life and accept it for whatever it was worth: Acceptance would lead to a sense of fulfillment and satisfaction and a lack of it would result in despair and sadness.

Difference between Enactive learning and vicarious learning

<u>Enactive learning</u> Learning by doing and reinforced by the consequence of action/outcomes.	<u>vicarious learning</u> Learning through observation not performances.
---	---

Difference between cultural diversity and cultural compatibility

Cultural compatibility: All cultural conflicts may not always lead to wars or battles but may result in cultural compatibility. Cultural compatibility is when diverse cultural units emphasize their differences and work collectively to achieve a common goal

Cultural diversity: is the quality of diverse or different cultures

Sensory memory

Sensory memory relates to memories taken in by the senses. Sensory memory is the shortest-term element of memory. Sensory memory is the initial processing that transforms (sight, sound, smell these incoming stimuli into information (seeing, hearing, tasting, smelling and feeling)

Behavior Shaping

Behavior shaping is a technique in which a teacher reinforces each small step of progress taken by his students towards a desired goal

Long term memory or short term

Short-term memory has a fairly limited capacity and can hold items for only short periods of time while long-term memory can store unlimited amounts of information indefinitely

Aggression instrumental aggression and hostile aggression

- Aggression
 - Physical or verbal behavior intended to cause harm
- Hostile Aggression (“social”)
 - Aggression that springs from **anger**; its goal is to injure
- Instrumental Aggression (“silent”)
 - Aggression that is a **means to some other end**

Difference between instrumental aggression and hostile aggression lesson#9

Aggressive Acts are divided into two categories:

1. **Hostile Aggression**- Aggressive acts which mainly focuses on purposely harming or injuring another individual.
2. **Instrumental Aggression**- Aggressive acts which mainly focus on gaining access to objects, space and privileges.

Example: A boy who hits and teases his sister and then continues to tease her for crying. This can be defined as **hostile aggression**.

The boy can act further by taking away a toy that his sister was playing with after hitting her. This would be defined as **instrumental aggression**. There can be a bidirectional relationship.

Culture, Material culture and non-material culture

What is Culture???

- **Culture**: consists of all the shared products of human groups.
 - **Material culture**: physical objects created by human groups. **EX**: cars, books, clothing, computers.
 - **Nonmaterial culture**: abstract human creations, such as language, ideas, beliefs, rules, skills, family patterns, work practices, and political and economic systems.

Macro and micro culture lesson#13

Macro level (large level)

Macroculture - Culture that all humans share in a general way - crosses local boundaries, may exist among groups internationally (global consumer culture that pervades upper-class groups transnationally)

Micro level (small level)

Microculture - local culture - patterns of learned & shared behavior and ideas in localized regions, among particular groups - ethnic groups, racial groups, genders, and age categories.

Kholbbug Stages of morality

Level/Stage	Age Range	Description
I: Obedience/Punishment	Infancy	No difference between doing the right thing and avoiding punishment
I: Self-Interest	Pre-school	Interest shifts to rewards rather than punishment – effort is made to secure greatest benefit for oneself
II: Conformity and Interpersonal Accord	School-age	The “good boy/girl” level. Effort is made to secure approval and maintain friendly relations with others
II: Authority and Social Order	School-age	Orientation toward fixed rules. The purpose of morality is maintaining the social order. Interpersonal accord is expanded to include the entire society
III: Social Contract	Teens	Mutual benefit, reciprocity. Morally right and legally right are not always the same. Utilitarian rules that make life better for everyone
III: Universal Principles	Adulthood	Morality is based on principles that transcend mutual benefit.

Top-down processing: **Top down processing, is based on knowledge and expectation.**

Bottom-up processing: **Information processing theory for how we recognize patterns and give meaning to sensory events**

Bottom-Up Processing	Top-Down Processing
Externally Based	Internally Based
Involves the listener playing close attention to every detail of the language input.	Involves the listener’s ability to bring prior information to bear on the task of understanding the ‘heard’ language.

Deductive or inductive

Deductive (General to specific) From information to example	Inductive (Specific to general) From example to information
--	--

Which culture relates a nation's respect and honors?

Non material culture

Which memory is helpful in mathematical formulas?

Learning Abilities

Question is from Erickson stage justification

One of the famous names in the area of Developmental/ Child Psychology is that of Erik Erickson

Think creatively and write at-least 5 reinforces for an elementary students

→Think independently→open to new ideas→Apply their imaginations→discover new and better ways to solve problems→Enhances the process of learning→Contribute to a better society

Gender bias examples in Pakistan

Gender Bias Society produces bias that is structured on the basis of gender identities, Gender bias is the construction of socialization process. Our education system is facing gender disparity badly that's why only 18% of Pakistani women have received 10 years or more of schooling

Strategy of problem solving explain with working backward strategy

Working backward strategy: where one students with goal moves backwards to solve a problem. It is sometimes an effective heuristic for solving geometry proofs

Gender bias

Gender Bias Society produces bias that is structured on the basis of gender identities, Gender bias is the construction of socialization process. Gender bias is commonly considered to be discrimination.

Gender bias is the difference in view of males and females that often favors one gender over the other.

Self-concept (idea of self-esteem)

Self-concept refers to what a person thinks of himself. His perceptions about himself; "I am strong, I am a weak man, I am a good student, I am bad at learning math" etc. are all examples of self-concept.

Self-talk

Piaget thought that when children carry on "self-talk" it might be considered by some as "egocentric Speech" or meant only for them, a sign of immaturity. Self-talk can have a great impact

on your confidence. It can be positive or negative, and have different effects on how you feel. There are a few ways you can develop better self-talk, which can be as simple as listening to what you're saying to yourself each day

Peer Influence

Peer pressure is direct influence on academic performance and achievement. Because poor students move and are friendly with other poor students, their peers and friends also belong to poor backgrounds.

Co-construction

Co-construction: to explain the process of learning of children by interacting with each other and members of a society to reach an understanding or to solve a problem

Learned helplessness

(Any student who failed continually) may come to believe that doing well in school is impossible. It is an expectation or feelings, due to previous experience

Working backward strategy

Working backward strategy: where one students with goal moves backwards to solve a problem. It is sometimes an effective heuristic for solving geometry proofs

Factors that influence academic achievement and in context of Pakistan

Academic success or achievement is closely related to number of factors

Poor Health Care, Low Expectations/Low Self-Esteem, Learned Helplessness, Peer Influences, Tracking, Childrearing Styles, Home Environment and Resources

Speech problems cause?

Speaking involves movements; any impairment of the motor functions involved with speech can cause language disorders, distorted by emotional problems (fear, terror, and lack of routine).

Verbalization

Verbalization is another technique of solving problems. It consists in putting the problem in clean unambiguous words.

Self-regulation resources

Three resources are following

Direct teaching: When students are taught how to regulate their behavior and its benefits and advantages.

Observing, watching and imitating a role model: Children and students adopt that behavior as role model and do the same things.

Carrying on, practicing self-regulated behavior: The saying that practice makes a man perfect also applies for self-regulated behavior.

LEARNER DIFFERENCES:

Speech Disorders, Articulation disorders, Stuttering, Voicing problems, Language Disorders

Slurred speech is a learning disability. Describe briefly

Slurred speech: It means a student is unable to speak words clearly.

Difference b/w Stuttering and voice disorder

To speak in such a way that the rhythm is interrupted by repetitions, blocks or spasms, or prolongations of sounds, it is also known as stammering, is a speech disorder	Voice disorders are loudness or quality of the sound affecting speech production. Voice disorder is characterized by the abnormal production and/or absences of vocal quality, pitch, loudness, resonance.
---	---

Teacher strategy to handle talented students

Teacher strategies to handle talented students are encouraging abstract thinking, giving indulgence to read and write giving them high level reading materials

Strategies of problem solving

Algorithm is a step by step procedure for solving a problem. Algorithm is usually used in domain-specific, which is in a particular subject area. In solving a problem, if you choose an appropriate algorithm and implement it properly, a right answer is guaranteed.

Speech disorders and language disorder

Speech disorders Students who cannot produce sounds effectively for speaking are considered to have a speech disorder.	language disorder Students who seldom speak, who use few words or very short sentences or who rely only on gestures to communicate
---	---

Trait of Masculine and feminine in pak culture

Gender role identity is the image each individual has of himself or herself as masculine or feminine in characteristics, a part of self-concept. People with a “feminine” identity would rate themselves high on characteristics usually associated with females, such as “sensitive” and low on characteristics traditionally associated with males, such as “forceful”.

Scope of Educational psychology

Educational psychology pervades the whole field of education. Growth and Development, It studies the Growth and Development of the child.

The Learner, The Learning Experiences, Learning process, Learning Situation or Environment, The Teacher, Human Behavior, Growth and Development, Environment, Personality, Individual Difference, Intelligence, Guidance and Counseling

Contribution of educational psychology in learning and teaching methods

Trans-personal psychology

Transpersonal psychology is a sub-field or "school" of psychology that integrates the spiritual and transcendent aspects of the human experience with the framework of modern psychology. It is also possible to define it as a "spiritual psychology"

Peer culture

Peer culture is defined as a stable set of activities or routines, artifacts, values, and concerns that children and youth produce and share with peers. Peer culture focuses on adolescents, with a primary concern on outcomes of experience with peers on individual development.

How perception is related to past experience

Human beings attach meaning to stimuli that they receive and this process of attaching meaning to sensations is called perception. A sensation may be combined with other sensations and our past experience to yield a perception. A perception is the organization of sensory information into meaningful experiences.

One related to Meta cognition

The term metacognition refers to the act of thinking about thinking, or the cognition of cognition. It is the ability for you to control your own thoughts. ... It really is the knowledge and regulation of cognitive phenomena which means, you can control your own thoughts.

What happens at the 'Trust vs. Mistrust' Stage? Who proposed it?

Proposed by Erick Ericson, the age of child at this stage is between births and about a year and half. The infant at this stage is faced with the problem of trust or mistrust with care giver

Two were related to dependent and independent variable,

""dependent"" variables are those that are observed to change in response to the independent variables. The ""independent"" variables are those that are deliberately manipulated to invoke a change in the dependent

The independent variable is the characteristic of a psychology experiment that is manipulated or changed. For example, in an experiment looking at the effects of studying on test scores, studying would be the independent variable.

One way to help identify the dependent variable is to remember that it depends on the independent variable. The dependent variable is also known as the response variable, the regress and, the measured variable, the responding variable, the explained variable, or the outcome variable.

A variable is anything that can vary, i.e. changed or be changed, such as memory, attention, time taken to perform a task, etc. Variable are given a special name that only applies to experimental investigations. One is called the dependent variable and the other the independent variable.

Home environment and resource impact on student academic achievement

Children belonging to poor families have very little or no access to educational aids and toys including books, calculators and computers. This phenomenon further has negative impacts on academic success

Tracking influence on student academic achievement

Tracking means, categorizing students according to their abilities, they are considered poor academic achievers, not because of the achievement, but because of their poverty.

What is development crisis and how can child handle it.

Development poses a particular problem, that he termed “developmental crisis”. A person, during his development, has to learn to resolve that particular developmental crisis of choosing between negative and positive alternatives, in order to grow and develop.

Narrate the implications of the theory of operant conditioning in educational settings.

Enactive learning is learning by doing and experiencing the consequences of your actions. This may sound like operant conditioning all over again, but it is not and the difference has to do with the role of consequences. In enactive learning, consequences are seen as providing information. Think of learning to ride a bicycle or learning how to swim.

The self-concept evolves through constant self-evaluation in different situations. Write a comprehensive note on development of self-concept.

Self-concept refers to a person's belief about himself. Self-efficacy refers to the competence to perform a specific task. Self-concept and self-efficacy are not the same. They are different.

Self-efficacy

Self-efficacy is the belief that a person has about his/her personal competence in a particular situation. For example if you are driving a car and get a flat tire and know that you can change it or get help to have it changed; this view shows a high level of self-efficacy.

What do you know about accommodation? Explain with the help of an example.

Enlist three limitations of experimental method. An experiment may be conducted on only one subject: it is called single subject experimental design; micro genetic studies intensively study cognitive process and change

As you are a student of educational psychology, point out the new horizons (نگاه وسعت) of this field.

New Horizons Psychology is committed to equality of opportunity, inclusive practice ... young people, parents, careers and educational and care professionals. New Horizons on Education Inspired by Information and views related to sociology, education science, psychology, ICT or computer science, working professionally with children, young people and their families in Education and Social Care.

Enlist three benefits of habit formation.

- a. Habits help us for smooth functioning
- b. Habitual actions cost us little effort and less strain
- c. Habits do not require our conscious attention
- d. Habitual actions save our time

MCQS

Educational psychology is a branch of psychology which deals with teaching and learning, this explanation was given by a prominent psychologist named _____. **Skinner**

Connectionist theories belong to which of following school of thought? **Gestalt psychology**

A prominent pioneer of educational psychology _____ was awarded the doctorate for his classic thesis "Animal Intelligence". **Thorndike**

Who among the following psychologists devised his own tests to measure the mental ability of his students and also measured the least noticeable difference in weight? **J. Cattell**

In designs involving rotation method we may obtain half measures for condition A, all the measures for condition B and then the other half of the measures for condition A. This technique is sometimes called: **ABBA**

Which of the following method is based on individual differences, and it is also named as Normative Survey method?

Which of the following method is directed towards the study of individual behavior?

- Experimental
- Differential
- Observational

Clinical

Observation and recording of behavioral events under controlled conditions is known as:

Introspection

Experimentation

Normative survey method

Psychoanalytic method

Edward Tolman is one of the founders of:

Behaviorism

Cognitive Psychology

Gestalt psychology

Psychoanalysis

In the early days of evolution of psychology behavior was studied through the method of inner observation, called _____.

Observation

Analysis

Introspection

Scrutiny

There are three classical psycho-physical methods devised by Fechner, which of the following is not included in it?

The method of minimal changes

The method of constant stimuli

The method of mean error

The method of mode error

Which of the following is relatively a prevalent approach in contemporary psychology, which studies how we feel in altered states of awareness?

Transpersonal psychology

Cognitive Psychology

Humanistic Psychology

Psychoanalytic

The control of conditions and variables is the key factor of _____ method.

Differential

Introspection

Observation

Experimental

Who set up the first American laboratory for psychology?

William James

Hermann Ebbinghaus

Granville Stanley Hall

Leona Tyler

Connectionist theories belong to which of following school of thought?

Cognitive psychology

Psychoanalysis

Behaviorism

Gestalt psychology

Quiz #2:

Mid Term Psy 406

By Pari

Carl Rogers, Abraham Maslow and Rollo May are some of the eminent workers of _____ School of psychology.

Humanist

Behaviorism

Gestalt

Transpersonal

Which of the following is the concentration of consciousness upon one subject rather than upon another?

Thinking

Problem-solving

Attention

A book entitled "The Measurement of Intelligence" was written by _____ during World War I.

Lewis Madison Terman

Leona Tyler

Thorndike

John Dewey

Which of the following method is based on individual differences, and it is also named as Normative Survey method?

Clinical method

Differential method

Experimental method

Naturalistic observation

Drives are influenced and guided by:

Incentives

Praise

Bonus and rewards

All of the given options

In Erickson's stages of psychosocial development "initiative" refers to:

Developmental crisis

Independence

Eagerness to engage in productive work

Willingness to begin new activities

In the early days of evolution of psychology behavior was studied through the method of inner observation, called _____.

Observation

Analysis

Introspection

Scrutiny

In Piaget's cognitive developmental stages, the stage after Sensorimotor is called:

Preoperational

Formal operational

Concrete operational

Operational

Emphasizes on the active participation of the student

Discovery learning

One situation proves helpful to learning in another situation

Transfer of learning

Understanding and remembering stories

Story grammar

Mid Term Psy 406

By Pari

Organizing and interpreting information	Schema
Individual to initiate and Direct behavior	Motivation
Previous learning into new situation	High road transfer
Expert student EXCEPT	They get easily distracted from their studies
Good summary EXCEPT	It comprises of irrelevant material
From general to the more specific	Deductive
Physical activity in order to learn swimming	Instrumental
