Graphs of Multiple Curves

Example:

- Plot the graphs of e^{-x} and $\sin(x)$ on the interval $[0; 8]$ using the **ezplot**, **hold on**, and **hold off** commands.
- Label the horizontal axis with **x** and vertical axis with **y**.
- Finally, gives the title "**Multiple Graphs**".

Which of the following command correctly calculate the value of $\cos(\pi/2)$

Select the correct option

PRESENTED BY: TALEEM MARKAZ

`cos(pi/2)`

`cos(22/7/2)`

`cos(sym(pi/2))`

none of these

For example, the floating point format of `cos(pi=2)` in MATLAB is `6:1232e - 17`. However, it is known that `cos(pi=2)` is really equal to **zero**.

The inaccuracy is due to the fact that typing `pi` in MATLAB gives an approximation to π accurately to about **15** digits. But **sym** command gives accurate value of π .

Which of the following command correctly calculate the value of $\cos(\pi/2)$

Select the correct option

PRESENTED BY: TALEEMI MARKAZ

$\cos(\pi/2)$

$\cos(22/7/2)$

$\cos(\text{sym}(\pi/2))$

(Lecture No.2, Pg.13)

Which operator is used to check if two elements are equal in MATLAB?

Select the correct option

PRESENTED BY: **TALEEMI MARKAZ**

=

==

!=

lsequal

== command is used to compare two variables (numbers, arrays, etc.) and say whether they match or not. This is different than a single **=** sign, which is an assignment. In **a==b** you'll get a single **true** or **false** value, or an array of them if **a** and **b** are arrays.

Which of the following is correct command to reduce the following expressions in simple form

$$\frac{(x-y)^3}{(x-y)}$$

Select the correct option

PRESENTED BY: **TALEEMI MARKAZ**

`syms x y:solve('x^3-y^3')`

`syms x y:simplify`

`syms x y:expansion((x-y)^3/(x-y))`

`syms x y:factorize((x-y)^3/(x-y))`

To solve the Algebraic equations in MATLAB. The command solve or fzero is used for this purpose.

Which of the following is correct command to reduce the following expressions in simple form

$$\frac{(x-y)^3}{(x-y)}$$

Select the correct option

PRESENTED BY: **TALEEMI MARKAZ**

`syms x y:solve((x-y)^3/(x-y))`

(Lecture No.3, Pg.19)

`syms x y:simplify((x-y)^3/(x-y))`

`syms x y:expansion((x-y)^3/(x-y))`

`syms x y:factorize((x-y)^3/(x-y))`

What is the error in the following code `x=-10:1:10; y=10:2:10. Plot(x,y)`

Select the correct option

PRESENTED BY: **TALEEMI MARKAZ**

syntax of plot command is wrong

plot command is wrong

length of x and y are not same

none of these

It is highly important that the length of the variables, between which we need to plot a graph, be same. This is a pre-defined syntax of **MATLAB** so **MATLAB** will return an error if the lengths are not same.

QUESTION 10 OF 10

What is the error in the following code `x=-10:1:10; y=10:2:10. Plot(x,y)`

Select the correct option
