Edu406 final paper 12-02-2024 by r_m

Edu406

Short Question !?

- ★ Name six phases of Dewey extension model?
- ★ 3 principal of supervision?
- ★ Three stages of grounded theory?
- ★ How Socrates method helps teachers in development critical thinking

Long Questions !?

- ★ Teacher growth model?
- ★ 5 phase of Dewey reflective cycle?
- ★ Stages of team development?
- ★ Teaching seems as a art rather than science?

[1:42 PM, 2/12/2024] +92 308 7311172: *Short Questions:*

1. *Name six phases of Dewey extension model?*

- Dewey's Extension Model typically consists of the following six phases:

1. Preparation
2. Presentation

3. Comparison

4. Generalization

5. Application

6. Evaluation

2. *3 principles of supervision?*

- The three principles of supervision may include:

1. Supportive Principle: Providing support, encouragement, and assistance to teachers.

2. Directive Principle: Giving clear directions, guidance, and feedback.

3. Collaborative Principle: Working together with teachers to set goals, solve problems, and improve teaching practices.

3. *Three stages of grounded theory?*

- The three stages of grounded theory are typically:

1. Open Coding: Initial categorization of data.

2. Axial Coding: Identifying connections and relationships between categories.

3. Selective Coding: Developing a central theory based on the most significant categories.

4. *How Socrates method helps teachers in developing critical thinking?*

- Socrates' method, also known as the Socratic Method, encourages questioning, critical thinking, and active engagement. Teachers can use this method by asking probing questions, challenging assumptions, and promoting dialogue, which helps students develop analytical skills and think critically about complex issues.

Long Questions:

1. *Teacher growth model?*

- The Teacher Growth Model refers to a framework or process through which teachers can continuously develop and improve their teaching practices. It may involve self-reflection, goal-setting, professional development activities, peer collaboration, and feedback mechanisms to support ongoing growth and improvement.

2. *5 phases of Dewey's reflective cycle?*

- Dewey's Reflective Cycle typically consists of the following five phases:

1. Problem Identification: Recognizing and defining the problem or situation.

2. Data Collection: Gathering relevant information and evidence related to the problem.

3. Hypothesis Formulation: Developing possible explanations or solutions based on the collected data.

4. Testing and Evaluation: Implementing the hypotheses and assessing their effectiveness.

5. Reflection and Learning: Reflecting on the outcomes, learning from the experience, and adjusting future actions accordingly.

3. *Stages of team development?*

- The stages of team development, as proposed by Bruce Tuckman, include:

1. Forming: The team comes together, gets to know each other, and clarifies goals.

2. Storming: Conflict and competition arise as team members establish their roles and work styles.

3. Norming: Cohesion develops, and norms and procedures are established to guide the team's work.

4. Performing: The team works effectively towards its goals, utilizing each member's strengths.

5. Adjourning: The team dissolves or transitions as its work is completed, leading to reflection and closure.

4. *Teaching seen as an art rather than science?*

- Teaching is often seen as an art because it involves creativity, intuition, and adaptability. Effective teaching

requires more than just following a set of predetermined rules or procedures; it involves understanding students' needs, engaging them creatively, and adapting teaching methods to different contexts and learners. While there are scientific principles and research-based practices in education, the application of these principles often requires artistic interpretation and skill.

- Factor analysis is a statistical method used to identify underlying factors that explain patterns of correlations among variables. It was developed by Charles Spearman. This technique helps in understanding the structure of observed variables and how they relate to latent constructs or factors.

2. *Basic Tenet of Humanistic Psychology*

- The basic tenet of humanistic psychology is the emphasis on the uniqueness and subjective experience of individuals. It focuses on the inherent goodness and potential for personal growth in each person. Humanistic psychology, pioneered by Carl Rogers and Abraham Maslow, values self-actualization and the importance of self-awareness.

3. *Learning Theorists*

- Three key theorists in the field of learning are:

1. *Ivan Pavlov:* Known for classical conditioning, which explores how organisms learn through associations.

2. *B.F. Skinner:* Introduced operant conditioning, emphasizing the role of consequences in shaping behavior.

3. *Albert Bandura:* Proposed social learning theory, highlighting the importance of observational learning and modeling.

4. *Types of Reinforcements*

- Based on the concept of reinforcements, there are two primary types:

1. *Positive Reinforcement:* Involves presenting a pleasant stimulus to increase the likelihood of a behavior recurring.

2. *Negative Reinforcement:* Involves removing an unpleasant stimulus to increase the likelihood of a behavior recurring.

5. *Freud vs. Maslow*

- Sigmund Freud and Abraham Maslow had different perspectives on personality:

- *Freud:* Emphasized the role of unconscious desires and conflicts, dividing the mind into id, ego, and superego.

- *Maslow:* Focused on the hierarchy of needs, suggesting that individuals strive for self-actualization after fulfilling basic needs.

6. *Three Ways of Self-Study*

- Three effective ways of self-study include:

1. *Active Reading:* Engaging with the material by taking notes, summarizing key points, and asking questions.

2. *Self-Testing:* Quiz yourself on the content to reinforce learning and identify areas that need further review.

3. *Teaching Others:* Explaining concepts to someone else enhances understanding and retention.

7. *Trait Theory of Personality*

- Trait theory posits that personality consists of stable and enduring traits. Traits are characteristics that vary between individuals and influence behavior. The trait theory focuses on identifying and measuring these traits to understand and predict behavior.

8. *Bandura*

- Albert Bandura is known for social learning theory, which emphasizes the role of observation and modeling in the learning process. He introduced the concept of self-efficacy, the belief in one's ability to succeed in specific situations.

9. *Albert Ellis*

- Albert Ellis is associated with Rational Emotive Behavior Therapy (REBT). He proposed that irrational beliefs and thoughts contribute to emotional distress, and changing these irrational beliefs can lead to positive behavioral and emotional outcomes
