Which of the following is untrue about the modification of PAM matrices?

Select the correct option

- At one time, the PAM250 scoring matrix was modified in an attempt to improve the alignment obtained
- All scores for matching a particular amino acid were normalized to the same mean and standard deviation, and all amino acid identities were given the same score to provide an equal contribution for each amino acid in a sequence alignment
- This took place in 1976
- These modifications were included as the default matrices for the GCG sequence alignment programs in versions 8 and earlier and are optional in later versions

Quiz Start Time: 04:18 AM, 27 June 2020

Question # 5 of 30 (Start time: 04:22:12 AM, 27 June 2020)

Total Marks: 1

Which of the following is untrue about the Unweighted Pair Group Method Using Arithmetic Average?

Please make sure

Select the correct option

- The simplest clustering method is UPGMA, which builds a tree by a sequential clustering method
- Given a distance matrix, it starts by grouping two taxa with the largest pairwise distance in the distance matrix
- The distances between this new composite taxon and all remaining taxa are calculated to create a reduced matrix
- The grouping process is repeated and another newly reduced matrix is created

Which of the following is incorrect about Retrieving a Specific Sequence?

Answer solved by Amaan Khan
Contact: 0305-4716616
Email: maniamaan2@gmail.com

Select the correct option

- (●) It can be difficult to retrieve the sequence of a specific gene or protein simply because of the sheer number of sequences in the Gen-Bank database and the complex problem of indexing them
- ( ) Other projects may benefit from the availability of better curated and annotated protein sequence databases, but not PIR and SwissProt
- ( ) For projects that require the most currently available sequences, the NR databases should be searched
- ( ) The genomic databases can also provide the sequence of a particular gene or protein. Protein sequences in the Genpro database are generated by automatic translation of DNA sequences.

BIF401:Grand Quiz (MIDTERM)

Quiz Start Time: 05:51 PM, 27 June 2020

Question # 3 of 30 (Start time: 05:51:53 PM, 27 June 2020) **Total Marks: 1**

Your lab partner is using BLAST, and his best E-value is 3. This means that

Select the correct option

- He's found 3 protein in the database that have the same sequence as his protein
- The chance that these similarities arose due to chance is one in 10^3
- There would be 3 matches that good in a database of this size by chance alone

Answer solved by Amaan Khan
Contact: 0305-4716616
Email: maniamaan2@gmail.com

- The match in amino acid sequence is perfect, except for the amino acids at 3 positions

Which of the following does not describe dynamic programming?

Select the correct option

- The approach compares every pair of characters in the two sequences and generates an alignment, which is the best or optimal
- Global alignment algorithm is based on this method
- Local alignment algorithm is based on this method
- The method can be useful in aligning protein sequences to protein sequences only

Select the correct option

- At one time, the PAM250 scoring matrix was modified in an attempt to improve the alignment obtained
- All scores for matching a particular amino acid were normalized to the same mean and standard deviation, and all amino acid identities were given the same score to provide an equal contribution for each amino acid in a sequence alignment
- This took place in 1976

Answer solved by Amaan Khan
Contact: 0305-4716616
Email: maniamaan2@gmail.com

- These modifications were included as the default matrices for the GCG sequence alignment programs in versions 8 and earlier and are optional in later versions

Which of the following does not describe local alignment?

Select the correct option

- A local alignment aligns a substring of the query sequence to a substring of the target sequence
- A local alignment is defined by maximizing the alignment score, so that deleting a column from either end would reduce the score, and adding further columns at either end would also reduce the score
- [x] Local alignments have terminal gaps

Answer Solved by Amaan Khan
Contact: 0305-4716616
Email: maniamaan2@gmail.com

- The substrings to be examined may be all of one or both sequences; if all of both are included then the local alignment is also global

Which of the following is untrue about the modification of PAM matrices?

Select the correct option

- At one time, the PAM250 scoring matrix was modified in an attempt to improve the alignment obtained
- All scores for matching a particular amino acid were normalized to the same mean and standard deviation, and all amino acid identities were given the same score to provide an equal contribution for each amino acid in a sequence alignment
- This took place in 1976

Answer Solved by Amaan Khan
Contact: 0305-4716616
Email: maniamaan2@gmail.com

- These modifications were included as the default matrices for the GCG sequence alignment programs in versions 8 and earlier and are optional in later versions
