BIO301 MID TERM PAST PAPERS

CLICK HERE TO VIEW MORE

1) Genetics can be studied by:
    - One way
    - **Two ways**
    - Three ways
    - Four Way
2) Example of Medilian Genetics:
    - Gene Linkage
    - Pliotropy
    - Epigenetic
    - None

3) In nature variation is:
    - Temporary
    - Consistent
    - Widespread
    - All

4) Condition in which an intermediate phenotype is developed from cross of parental generation:
    - Co-dominance
    - Incomplete dominance
    - Both
    - Over Dominance

5) Condition in which one gene prevent the expression of other gene.
    - Polymorphism
    - Pleiotropy
    - Epistasis
    - Polygon

6) Bacterial Chromosome is made up of:
   - DNA
   - Histone
   - Both
   - RNA

7) Structure of Chromosome Stability:
   - Telomere
   - Centrosome
   - Centromere
   - Chiasmata

8) Broken Ends of Chromosomes are:
   - Fluffy
   - Sticky
   - Transparent
   - Non Sticky

9) Centromere is unable to work due to mutation in:
   - CDE-I
   - CDE-II
   - CDE-III
   - CDE-IV

10) XO System of sex is present in:
   - Fuitfly
   - Grasshoper
   - Snake
   - Frog

11) Prokaryotic Cell divides by:
   - Budding
   - Grafting
   - Mitosis
   - Binary Fission

12) Chromosomes become fit in the central line:
    - Anaphase
    - **Metaphase**
    - Telo-phase
    - Prophase

13) Haploid cells are produced by:
    - Mitosis
    - Meiosis
    - Both
    - Parthenogenesis

14) Tetrads align at center:
    - Telophase I
    - Prophase I
    - Metaphase I
    - Anaphase I

15) Which one is true:
    - Sister chromatids are not identical in mitosis
    - Sister chromatids are identical in meiosis
    - Sister chromatids are not identical in meiosis
    - Non sister chromatids are identical in mitosis

16) Genes are present on chromosomes first time said by:
    - Greogor Mendel
    - T.H.Morgan
    - Walther Flemming
    - T.J.Robert

17) Cross for determination of genotype of an individual:
    - Cross over
    - Hybrid cross
    - Dihybrid cross
    - Test cross

18) In ABO blood group system:
    - Allele A is dominant over allele B
    - Allele B is dominant over allele A
    - Alleles A and B show co-dominance
    - Alleles A and B show incomplete dominance

19) If two genes are more close then frequency of cross over will be:
    - High
    - Low
    - High and low
    - Medium

Subjective:

1) Differentiate between forward and reverse genetics?
2) What type of cell division occurs in somatic cells
3) Compare chromosome with chromatin?
4) Differentiate between haploid and diploid cells?
5) Explain that how Mendel's work prove the heredity and variation among individuals?
6) Write the names of genes (used for gene mapping in Drosophila) and the recombination frequencies among them?

(THE END)
