VU MEDICAL ZONE

VU Medical Zone Effort

BT 201 Subjective Midterm

2 marks

Qno1: Define Community Structure.

Answer: Community structure is essentially the composition of a community, including the number of species in that community and their relative numbers^11start superscript, 1, end superscript. It can also be interpreted more broadly, to include all of the patterns of interaction between these different Species.

Qno2: What is intermediate disturbance hypothesis?

The intermediate disturbance hypothesis suggests that communities with a medium (intermediate) level of disturbance may have greater species diversity than communities with very frequent or very rare disturbances.

Qno3: What is Ecological Genomic?

A scientific discipline that studies the structure and functioning of a genome with the aim of understanding the relationship between the organisms and its biotic and abiotic environment.

Created by Amaan Khan

VU MEDICAL ZONE

Qno4: Enlist four reasons for lacking of fossil record?

1. Soft tissues are rarely preserved

2. Movement of the earth's crust has obliterated and/or covered many fossils

3. Fossilization takes place only in certain types of habitats and favorable environments

4. Paleontologists have not dug up every place on earth

Qno5: Define Genome.

In the fields of molecular biology and genetics, a genome is the genetic material of an organism. It consists of DNA (or RNA in RNA viruses). The genome includes the genes (the coding regions) and the noncoding DNA, as well as mitochondrial DNA and chloroplast DNA. The study of the genome is called genomics.

Qno6: Define Bioinformatics.

The field of biology specializing in developing hardware and software to store and analyze the huge amounts of data being generated by life scientists. (NIH).

Qno7: What does **intermediate disturbance hypothesis suggest?**

The intermediate disturbance hypothesis suggests that communities with a medium (intermediate) level of disturbance may have greater species diversity than communities with very frequent or very rare disturbances.

Qno8: Write down the role of Primers in PCR.

PCR primers are short fragments of single stranded DNA (15-30 nucleotides in length) that are complementary to DNA sequences that flank the target region of interest. The **purpose** of **PCR primers** is to provide a "free" 3'-OH group to which the DNA polymerase can add dNTPs.

Qno9: Define proteomics.

Proteomics is the study of all the proteins in the cell. Mass spectrometry may also be used to determine the amino acid sequence of a protein.

Qno10: Enlist the type of servers used in Bioinformatics.

1. WWW servers

2. Database servers

3. Intensive computing servers

Qno11: Enlist three major technological developments in 1990s.

Three major technological developments of 1990s

 Microtechnology

Created by Amaan Khan

VU Medical Zone Effort by Amaan Khan

VU MEDICAL ZONE

- Computing
- Communication

Qno12: How sequence assembly is done by using shotgun approach?

Master sequence --------- Short sequences, simply examining the sequences for overlaps.

- No need any prior knowledge of the genome.

Qno13: What are three layers of genome annotation?

1. Transcriptional control sites
2. Non-coding RNAs
3. mRNAs

Qno14: Differentiate between species three and gene tree.

Species tree (how are my species related?)

Contains only one representative from each species when did speciation take place?)

All nodes indicate speciation events

Gene tree (how are my genes related?)

Often contains a number of genes from a single species.

Nodes relate either to speciation or gene duplication events.

Qno15: Define Microtechnology.

The possibility of working with molecules on the scale of a few micrometers, given by advances in laser technology, has been very important for one of genomics' most conspicuous achievements, the development of the gene chip.

Qno16: What is hidden markov model?

The Hidden Markov Model is a finite set of *states*, each of which is associated with a (generally multidimensional) probability distribution. Transitions among the states are governed by a set of probabilities called *transition probabilities*. In a particular state an outcome or *observation* can be generated, according to the associated probability distribution. It is only the outcome, not the state visible to an external observer and therefore states are ``hidden'' to the outside; hence the name Hidden Markov Model.

Medical Zone Effort by Amaan Khan

3 marks

Qno1: Explain species richness and species diversity with example.

Created by Amaan Khan

Species richness is the number of different species in a particular community. If we found 30 species in one community, and 300 species in another, the second community would have much higher species richness than the first.

Species diversity is a measure of community complexity. It is a function of both the number of different species in the community (species richness) and their relative abundances (species evenness). Larger numbers of species and more even abundances of species lead to higher species diversity. For example: A forest community with 20 different kinds of trees would have greater species diversity than a forest community with only 5 kinds of trees

Qno2: How the Evolutionary history convert in to document?

• Comparing nucleic acids or other molecules to infer relatedness is a valuable tool for tracing organisms' evolutionary history • DNA that codes for rRNA changes relatively slowly and is useful for investigating branching points hundreds of millions of years ago

• mtDNA evolves rapidly and can be used to explore recent evolutionary events

Qno3: Name the Phyla in amoeboid protozoan? Write the name of the phyla which includes in amoeboid protozoans and describe their locomotion.

• CONTAINS 4 PHYLA: FORAMINIFERA, RADIOZOA, AMOEBOZOA, AND HELIOZOA MOST REPRODUCE ASEXUALLY THROUGH BINARY FISSION CHARACTERIZED BY PSEUDOPODIA

• FOOD IS USUALLY CAPTURED BY PHAGOCYTOSIS

• BODY TYPES RANGE FROM FREE FLOWING TO RIGID WITH SKELETAL SUPPORTS

Qno4: Interaction between Gene within Genome.

- Sketched by Dover (1999) as an internal tangled bank
- Idea of Darwin (1859) Dover (1999
- 'External tangled bank' (the ecology)
- The 'internal tangled bank' (the genome)

Qno5: How Keystone species differ from foundation species?

A keystone species is a species that has a disproportionately large effect on community structure relative to its biomass or abundance. Keystone species differ from foundation species in two main ways: they are more likely to belong to higher trophic levels (to be top predators), and they act in more diverse ways than foundation species, which tend to modify their environment.

Qno6: Explain Sequencing.

Ecologists have two options.

VU Medical Zone Effort by Amaan Khan

• One is to develop their own micro-arrays, starting with spotted cDNAs of unknown sequence, doing a lot of tedious sequencing work, and gradually finding out more about the genome of their study species.

• Another option is to apply transcriptome samples of non-models to microarrays of model species.

Qno7: Write at least three reasons to use Phylogenetic.

Major reasons to use phylogenetics

Understand the lineage of different species (Organizing principle to sort species into a taxonomy)

Understand how various functions evolved Understand forces and constraints on evolution

Perform multiple sequence alignment

5 marks

Qno1: Explain the importance of Biodiversity.

BIODIVERSITY HAS A NUMBER OF FUNCTIONS ON THE EARTH.

THESE ARE AS FOLLOWS:

• MAINTAINING BALANCE OF THE ECOSYSTEM;

• RECYCLING AND STORAGE OF NUTRIENTS;

• COMBATING POLLUTION, AND STABILIZING CLIMATE, PROTECTING WATER RESOURCES,

• FORMING AND PROTECTING SOIL AND MAINTAINING ECO-BALANCE.

• INTRINSIC VALUE

• A PHILOSOPHICAL CONCEPT OF THE VALUE OF SOMETHING INDEPENDENT OF ITS VALUE TO ANYONE OR ANYTHING

PROVISION OF BIOLOGICAL RESOURCES

PROVISION OF MEDICINES AND PHARMACEUTICALS, FOOD FOR THE HUMAN POPULATION AND ANIMALS, ORNAMENTAL PLANTS, WOOD PRODUCTS, BREEDING STOCK AND DIVERSITY OF SPECIES, ECOSYSTEMS AND GENES.

• QUINONE IS A DRUG USED FOR THE TREATMENT OF MALARIA WHICH IS OBTAINED FROM THE CINCHONA GENUS OF PLANTS.

SOCIAL BENEFITS

VU Medical Zone Effort by Amaan Khan

VU MEDICAL ZONE

• RECREATION AND TOURISM, CULTURAL VALUE AND EDUCATION AND RESEARCH. • THE ROLE OF BIODIVERSITY IN THE FOLLOWING AREAS WILL HELP MAKE CLEAR THE IMPORTANCE OF BIODIVERSITY IN HUMAN LIFE:

BIODIVERSITY AND FOOD

• 80% OF HUMAN FOOD SUPPLY COMES FROM 20 KINDS OF PLANTS. BUT HUMANS USE 40,000 SPECIES FOR FOOD, CLOTHING AND SHELTER. BIODIVERSITY PROVIDES FOR VARIETY OF FOODS FOR THE PLANET.

BIODIVERSITY AND HUMAN HEALTH

• THE SHORTAGE OF DRINKING WATER IS EXPECTED TO CREATE A MAJOR GLOBAL CRISIS. BIODIVERSITY ALSO PLAYS AN IMPORTANT ROLE IN DRUG DISCOVERY AND MEDICINAL RESOURCES.

MEDICINES FROM NATURE ACCOUNT FOR USAGE BY 80% OF THE WORLD'S POPULATION.

BIODIVERSITY AND INDUSTRY

• BIOLOGICAL SOURCES PROVIDE MANY INDUSTRIAL MATERIALS. THESE INCLUDE FIBER, OIL, DYES, RUBBER, WATER, TIMBER, PAPER AND FOOD.

BIODIVERSITY AND CULTURE

• BIODIVERSITY ENHANCES RECREATIONAL ACTIVITIES LIKE BIRD WATCHING, FISHING, TREKKING ETC. IT INSPIRES MUSICIANS AND ARTISTS.

Qno2: How Organisms are related with one another in the Genome Evolution?

Gene duplication increases the number of genes in the genome, providing more opportunities for evolutionary changes. Like homologous genes, duplicated genes can be traced to a common ancestor

• Orthologous genes are found in a single copy in the genome and are homologous between species. They can diverge only after speciation occurs

• Paralogous genes result from gene duplication, so are found in more than one copy in the genome. They can diverge within the clade that carries them and often evolve new functions.

Genome Evolution

• Orthologous genes are widespread and extend across many widely varied species

• Gene number and the complexity of an organism are not strongly linked

• Genes in complex organisms appear to be very versatile and each gene can perform many functions

Qno3: What is significance of sequencing genome in Ecology? Explain examples.

Ecologists have two options.

Created by Amaan Khan

VU Medical Zone Effort by Amaan Khan

• One is to develop their own micro-arrays, starting with spotted cDNAs of unknown sequence, doing a lot of tedious sequencing work, and gradually finding out more about the genome of their study species.

• Another option is to apply transcriptome samples of non-models to microarrays of model species.

For example, arabidopsis may function as a model for other species of the brassicaceae, and drosophila as a model for other higher insects. Obviously, how useful such an approach is will depend on how far the sequences of model and non-model diverge. This will not be the same for all parts of the genome and therefore there is some doubt on the validity of cross-species hybridization, although there will certainly be situations where it works well.

Qno4: What are Phylogenetics trees?

Phylogenetic Trees with Proportional Branch Lengths

• In some trees, the length of a branch can reflect the number of genetic changes that have taken place in a particular DNA sequence in that lineage.

• In other trees, branch length can represent chronological time, and branching points can be determined from the fossil record

Maximum Parsimony and Maximum Likelihood

• Systematists can never be sure of finding the best tree in a large data set

• They narrow possibilities by applying the principles of maximum parsimony and maximum likelihood

• Maximum parsimony assumes that the tree that requires the fewest evolutionary events (appearances of shared derived characters) is the most likely

• The principle of maximum likelihood states that, given certain rules about how DNA changes over time, a tree can be found that reflects the most likely sequence of evolutionary events

Qno5: Write five factors that affects the community structure?

Here are some important factors that influence community structure:

• The climate patterns of the community's location.

• The geography of the community's location.

• The heterogeneity (patchiness) of the environment

• The frequency of disturbances, or disruptive events.

• Interactions between organisms.

VU Medical Zone Effort by Amaan Khan

Qno6: Why study is important for the evolutionary study?

• Whole-genome analysis of organisms at crucial or disputed positions in the tree of life can be expected to contribute significantly to our knowledge of evolution.

• The sea squirt, ci. Intestinalis, was chosen as a model because it belongs to a group, the Urochordata, with properties similar to the ancestors of vertebrates.

• The study of this species should provide valuable information about the early evolution of the phylum to which we belong ourselves.

• Many other organisms, although not on the list for a genome project to date, have a strong case for being declared as model species for evolutionary arguments. These include the velvet worm, Peripatus, traditionally seen as a missing link between the arthropods and annelids, but now classified as a separate phylum in the panarthropoda lineage (nielsen 1995), and the springtail, folsomia candida, formerly regarded as a primitive insect, but now sug-gested to have developed the hexapod bodyplan before the insects separated from the crustaceans (nardi et al. 2003).

VU Medical Zone Effort by Amaan Khan
