Bt406 Past Midterm Subjective File

Objective Part:

1. There are mostly _____ parties in the research. **Three**
2. Moving up the ladder of abstraction, the basic concept becomes more abstract, _____in scope, and less measurable. **wider**
3. Effect of 2 variables together is likely to be_____ than the individual effect of each. **Greater**
4. In Research work it is Easier to manage ____group. **Small**
5. There are ____ broad step in conducting survey. **Six**
6. Students of research methodology must conduct the research by following the _____research process. **Complete**
7. _____Document that presents a plan for a project to reviewers for evaluation. **Research Proposal**
8. _____Estimate the likely consequences of planned change. **Impact Assessment**
9. Every human knowledge is ___science. **Not**
10. There are ____basic components of Theoretical Framework. **Six**
11. The nature of relationship is not specified in **Nondirectional relationship.**
12. We are surrounded by ____ research. **Social**
13. Methods and ____sections are the most critical. **Results**
14. Experiments, Surveys, Content Analysis and _____are the research technique used in quantitative research. **Using Existing Statistics**
15. In ____ researchers read other people research. **Review**
16. Proposition is a statement concerned with the _____relationships among concepts. **Logical**
17. By repeating the observation, researcher wants to be **Positive.**
18. Parsimony is defined as Minimum No. of variables that explain **Variance.**
19. _____is also called haphazard or accidental or grab sampling. **Convenience Sampling**
20. Theoretically there is a _____ degree of control on the research situations. **High**
21. _____is the process of checking and adjusting the data for omissions, legibility, and consistence. **Editing**

Created by Universal Document Converter

22. _____phenomenology is focused less on the interpretations of the researcher and more on a description of the experiences of participants. **Transcendental or psychological**
23. The _____ethnography is a traditional approach used by cultural anthropologists. **Realist**
24. Researcher read percentage tables to make **comparisons**
25. Tables and graphs are **pictorial presentation of data**
26. _____process of changing data from original form to a form that is more suitable to perform data analysis. **Data transformation**
27. _____is a form of social inquiry that focuses on the way people interpret and make sense of the experiences and the world in which they live. **Qualitative research**
28. The intent of the grounded theory is **to move beyond description**
29. The intent in ethnography is to **determine how the culture work.**
30. A _____is a form of narrative study in which the researcher writes and records the experiences of another person's life. **biographical study**

Subjective Part

2 Marks Questions

1. **Define research?**
   - Gathering information needed to answer a question, and thereby help in solving a problem.
   - Systematic and organized effort to investigate.

2. **What are the sources of concept?**
   - We create concepts from personal experience. Mass, speed, family.
   - We borrow from other disciplines.
   - We develop a specialized jargon or terminology for a particular subject.

3. **Difference between dependent and independent variable?**

Dependent variable	Independent variable
effect variable is (Y).	X variable that influences the Y variable
Variation in Y is influenced by some other factor (s)	The variance in Y is accounted for by X

3 Marks Questions

1. **Theoretical framework and enumerates its basic six features?**

Created by Universal Document Converter

- Theorizing the relationships among several factors relevant to the study.
- Can be called a conceptual model

Six basic components of Theoretical Framework

1) **Make an inventory of variables**
   - Identify the variables relevant to the study.
   - Search the literature, talk with informants, and observe.
2) **Specify the direction of relationship**
   - Theorize the direction of relationship among the variable
   - negative or positive
3) **Logic for the proposed relationship**
   - Theorize the logical relationship between different variables.
   - Argument could be built up on the basis of previous studies, observations, inferences.
4) **Make an inventory of propositions**
   - Stipulation of logical relationship between two variables ends up in a proposition.
   - Number of interrelationships resulting in a number of propositions.
   - Each proposition supported by rigorous logic.
   - Take stock of the proposition
5) **Arrange propositions sequentially**
   - Interlink the propositions and arrange them sequentially.
   - Axiomatic derivation.
   - This will be theoretical framework variables
6) **Present schematic diagram**
   - Helps in understanding the theorized relationships among the variables.

2. What are characteristics/ features of scientific method?

1. **Empirical**
   - Observable phenomenon
2. **Verifiable**
   - Use senses to confirm or refute the observation.
   - "Sensory experiences"
   - Intuitions and revelations are out.
   - Replicability needed.
3. **Cumulative**
   - Knowledge grows.
   - Need not start from scratch.
4. **Deterministic**
   - Explains why things happen?
   - Parsimony is Minimum No. of variables that explain variance.
5. **Ethical and ideological neutrality**
   - Value free.
   - Objectivity. Is it possible?

Created by Universal Document Converter

6. **Statistical generalization**
7. **Rationalism**
    - Employ rigorous rules of logic.
    - Argumentation.

3. **Rights of Participants in study ?**

Rights of the participants

No physical harm, discomfort, pain, embarrassment, or loss of privacy.
Follow three guidelines:
1. Explain study benefits.
2. Explain respondent rights and protections.
3. Obtain informed consent

4. **Enumerates importance of research method?**

- A Tool for Building Knowledge and for Facilitating Learning
- Means to Understand Various Issues and Increase Public Awareness
- An Aid to Business Success
- A Way to Prove Lies and to Support Truths
- A Seed to Love Reading, Writing, Analyzing, and Sharing Valuable Information

Or

There are broadly six methods which are surveys, experiments, observation, communication analysis, case study, focus group discussions. Different research methods have different purposes and different levels of validity.

5 Marks Questions

1. **Difference between exploratory research and descriptive research?**

Exploratory Research:

- Initial research conducted to clarify and define the nature of the problem. Exploring a new topic.
- Specifically, there could be number of goals of exploratory research.

Goals of Exploratory Research:

- Become familiar with the topic. Develop well grounded picture of the situation.
- Develop tentative theories.
- Determine the feasibility of study.
- Formulate questions and refine issues for more systematic inquiry.
- Develop techniques and a sense of direction for future research

Descriptive Research:

- Research designed to describe characteristics of the phenomenon understudy.
- Helps in diagnostic analysis

Goals of Descriptive Research:

Created by Universal Document Converter

- Describe the situation/characteristics. Provide an accurate profile of a group.
- Give a verbal or numerical picture (%).
- Present basic background information.
- Create a set of categories or classify.
- Clarify sequence, set of stages.
- Focus on 'who', 'what', 'when', 'where' and 'how' but not on 'why'.

2. **Difference between cross sectional studies & longitudinal Studies. 5**

cross sectional studies	**longitudinal Studies**
Observe at one point in time	Examine at more than one time
It can be Snapshot study	It can be Time series study, Panel study Cohort study.
cross-sectional studies interview a fresh sample of people each time they are carried out.	longitudinal studies follow the same sample of people over time.
It is a cheaper and easier than longitudinal studies.	It is an expensive and difficult to conduct.
Data are collected for single time period.	Data are collected for two or more time periods.

3. **points to keep in mind while making table...? 5**

Bivariate Tables:-

Bivariate contingency table widely used.

- The table is based on cross tabulation.
- Cases are organized in the table on the basis of two variables at the same time.
- A contingency table is formed by cross-tabulating two variables
- Contingent because the cases in each category of a variable get distributed into each category of second variable

Constructing bivariate and percentage table

Let us take two variables:

- Age of the respondents.
- Attitude toward women empowerment.
- Age of the respondents ranged from 25 to 70 years.
- The attitude index has three categories of 'highly favourable,' 'Medium favourable,' and 'low favourable'
