

PSY406

- **Cognitive Views of Learning:** This refers to how people process and understand information. It focuses on how the brain works to learn, store, and recall knowledge. For example, when you solve a problem or remember a fact, you're using cognitive processes.
- **Complex Cognitive Processes:** These are advanced thinking skills that go beyond simple memory. They include things like problem-solving, decision-making, critical thinking, and reasoning. It's how we apply knowledge in more complicated and creative ways.
- **Social Cognitive and Constructivist Views of Learning:**
 - **Social Cognitive View:** This focuses on how learning happens through observing others and interacting with them. For example, we learn by watching teachers, peers, or even media.
 - **Constructivist View:** This suggests that people build their own understanding of the world through experiences and reflections. It's like learning by doing and connecting new information to what we already know.
- **Motivation in Learning and Teaching:** This is about what encourages or drives students to learn. Motivation can come from internal factors (like a desire to succeed) or external factors (like rewards or praise). Teachers aim to create motivation in students to help them learn effectively.
- **Creating Learning Environment:** This refers to setting up a classroom or educational setting that is comfortable, supportive, and encourages learning. It includes things like arranging seating, using resources, and promoting a positive atmosphere for students to engage in learning.
- **Teaching for Academic Learning:** This focuses on teaching students academic skills like reading, writing, and math. It's about helping students succeed in formal education by mastering core subjects.
- **Teaching for Self-Regulation, Creativity, and Tolerance:**
 - **Self-Regulation:** Teaching students to manage their own learning, like setting goals, staying focused, and controlling distractions.
 - **Creativity:** Encouraging students to think outside the box, come up with new ideas, and solve problems in innovative ways.
 - **Tolerance:** Teaching students to respect and appreciate different opinions, cultures, and beliefs.

- **Standardized Testing:** These are tests that are the same for everyone, with set questions and scoring methods. They are designed to measure students' abilities in a fair way, but sometimes they might not reflect a student's full range of skills.

- **Classroom Assessment and Grading:**

- **Classroom Assessment:** This is the process of evaluating how well students are learning through methods like quizzes, assignments, or observations.
- **Grading:** This is how teachers assign a score or mark to students' work to show how well they have understood or completed a task. It helps determine students' progress.
