

BIO202

CURRENT MCQS 2023

MARYAM SALEEM KHAWAJA

🦋🌸MERRY🌸🦋

VU EXPERT ZOOLOGISTS

My MCQs were. 🐼_🐼

1. PDC) is a complex of three enzymes that convert pyruvate into**acetyl-CoA**
2. are those which cannot be hydrolyzed further into simpler forms **Monosaccharides**
3. are those sugars which yield two molecules of the same or different monosaccharides on hydrolysis...**Disaccharides**
4. Proteins in iron..... **ferritin**
5. Ketohexose is. **D-fructose,**
6. A buffer system pH depends upon of a**both a and b (weak acid and its conjugate base)**
7.of the CO₂ formed in the tissues to the lungs and the kidneys. **15% to 20%**

8. Omega 6 other name **Linoleic acid**
9. Standard Amino acids.....**20**
10. **V_{max}** is unchanged by the presence of a**competitive inhibitor.**
11. **Triacylglycerol** are soluble in.....**ether, benzene, acetone, chloroform)**
12. **The deleterious effects of trans fats** occur at intakes of**2 to 7g/day**
13. **Optimum pH for pepsin**.....**2**
14. **RNA gets denatured at**..... I think it was **pH 10** not sure
15. **pH doesn't effected by**.....?
16. **If T= 20%others will be??**
17. **Tags are not denatured by**.....options nhi yaad 😞
18. **Enzymes are except**.....**chemically change during the reation**
19. **These are semi cyclic structures. They exert complex control over many bodily systems; in inflammation ,immunity, and as messengers in the central nervous system**.....**eicosanoids**
20. **Amino acids in solution at neutral pH exist predominantly as****dipolar ions**
21. **phosphatidylcholine****phosphatidylethanolamine + Choline**
22. **Cholesterol is an** **amphipathic lipid**
23. **VLDLs composed predominantly of** **TAGs**
24. **The mammalian ribosomes contains two major nucleoproteinssubunits**.....(**Large 60S smaller 40S**)
25. **enzymes are divided into**major classes. **Six**
26. **Double ringed base?**.....**purines**
27. **tRNA. In cell**.....**20%**
28. **Transition state involves?** bond breakage, bond formation, and charge development have proceeded
29. **Deoxyribose-phosphate backbone is** **hydrophilic**

30. 5'-end there is a free **phosphate**
31. Sphingolipids, like other membrane lipids, are composed of a **hydrophobic portion, and a polar head group**
32. does not show positive acrolein test... **Sphingosine**
33. Which bond is not present in water
34. Baaqi bhool gyee 😞

Some others

Iodine number olive oil from..... **79 to 88,**

The light produced by fireflies is the result of a reaction involving the protein **luciferin**

Trans form of maleic acid is called_____. **Fumaric Acid**

Which amino acids has two groups, the COOH..... **Glycine**

SEMINAL FLUID IS RICH IN.....**fructose**

Constituent of chondroitin....– **D -mannosamine**

The amount of guanine equals the amount of**cytosine**

Purine bases: **Adenine (A) and Guanine (G)**

Branched polysaccharide are in..... **Glycogen**

Number of carbon in steric acid.....**18**

Beta-bends are short regions usually involving successive aminoacidresidues.....**four**

There are two subclasses of..... **sphingolipids:**

mRNA comprise about of total cellular RNA. **2–5%**

pKa Acetic a, pepsin, a digestive enzyme in the stomach, is

maximally active at pH 2.

.....is the catabolic end product of purines in human beings.....

Uric acid

Keratin is present in _____. All Of These

Net charge of alanine in basic sol

Sugar in DNAT,A,C,G

Thymine, cytosine and uracil are Pyrimidine

6-ring of monosaccharides?.....pyran/pyranoses

Palmitic acid carbon...16:0

Rhinoceros horn, are made up of.....proteins.. keratin

polymers of same monosaccharide units..... Cellulose

These enzymes catalyze condensation reactions joining two molecules by forming C-O, C-S, C-N and C-C bonds.....

ligases

Indigestible Carbohydrate?..... Waxes

Furfural gives color.....red

Super secondary structure of proteins....motif

Sialic acid gives ganglioside negative charge at pH...7

Trans of maleic acid fumaric acid

glycosidic bond formation at which carbon no..... alpha(1,4)

Glucose residues in amylose are linked by _____. A (1,4) linkage

Ribonucleic acid (RNA)—the ..of the (DNA) — that the Master plan

is expressed.....

"working copies"

About ____ of amino acid residues in the myoglobin are found in alpha helices. ____ **78%**

Percentage of rRNA in cell **80%**

Serine+ palmitate= **Sphingosine**

Cholesterol in synthesize in----... **Liver**

Which one is not correct..... **Guanine is equal to Thymine**

Simple arrangement of polypeptide with recurring....is ka
secondary

Glycosidic linkage dosra glucose say konsi carbon involve hoti
ans ***C4***

Which hemoglobin is found in adults..... **hemoglobin A**

Molecular weight of water.....**18**

The Tm of DNA is influenced by _____ **All Of Above**

Purine base found in RNA is _____ **Guanine**

MCQs BIO202

1-rhinoceros horn is made of..... Keratin

2-RNA is the
(working copies of DNA)

3-pH of the pepsin enzyme..... (2)

4- pKa of the acids
(all)

5-..... is the final product of the purines in humans (uric acid)

6-• The mammalian ribosome contains two major nucleoprotein subunits:

(a larger one with 60S and smaller one with 40S.)

7-super secondary structure of protein..... (**motif**)

Sialic acid gives gangliosides the negative charge at pH 7

stearic acid have carbon numbers

18:0

8:16 PM ✓

Bio202 mcqs mushkil thy ziada r handout sy mid sy ziada thy Kuch hi file sy thy.

1. stearic acid has carbon ____ 18

2. Symbol of aspartate ____ D

3. which Sugar found in fruit ____ fructose

4. Furfural ka tha Kuch k colors btana tha corbohydrate sy

5. Simple triacylglycerol btana tha kn sa hai [tripalmitin](#)

6. Which protein has specific site for attachment.. digestive.respiratory . Ya toxin

7? Measure of randomness of system ____ entropy

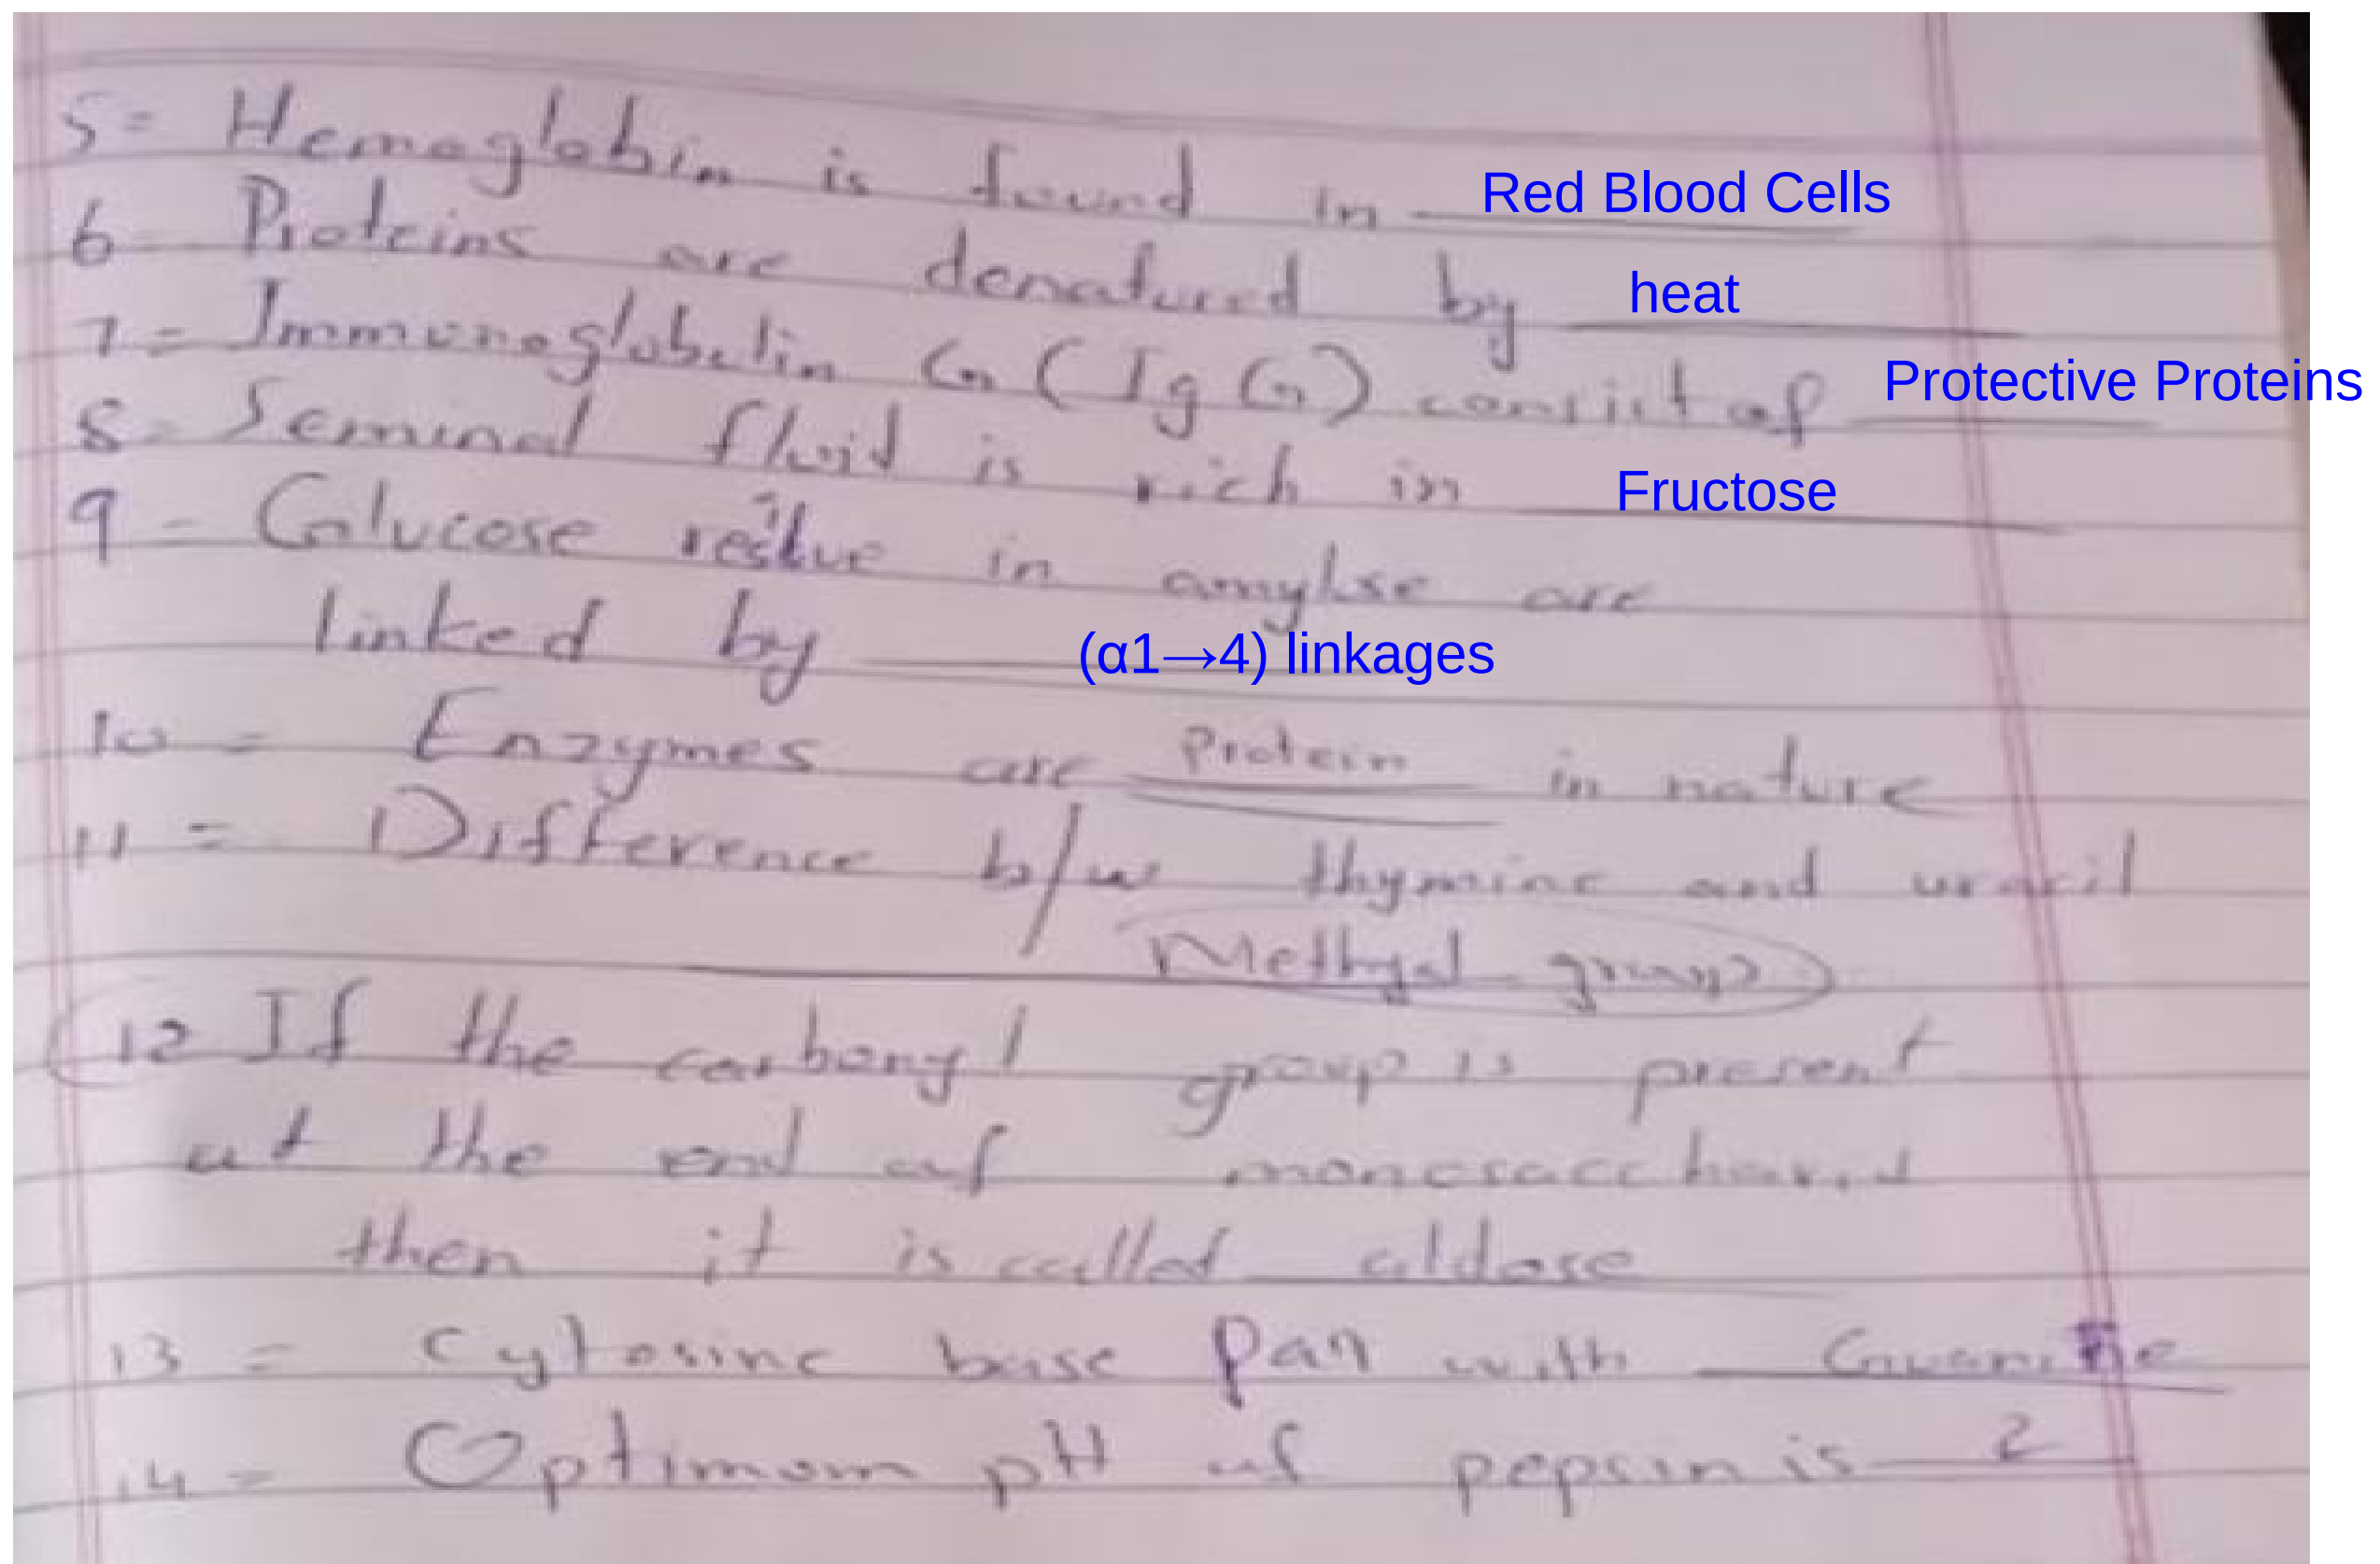

8. If 18 % are adenine then % of thymine is ____ 18%

9. The mammalian ribosomes contains two major nucleoproteins

subunits.....(Large 60S and 40 S

10. % of tRNA in cell ____

- 1) Hyaluronic acid composed _____
- 2) Fireflies produced ^{light} by _____ luciferin.
- 2) DNA denaturation occurs at λ 260 nm
- 3) Table sugar _____ sucrose
- 4) Lactose converted to lactic acid by lactase
- 5) anistok have same chemical formula: $C_6H_{12}O_6$
 - a) Fructose **Right is Glucose**
 - b) Lactose
 - c) Amylose
 - d) Sucrose
- 6) Five carbon carbohydrate _____ Furanose.
- 7) Eicosanoids derived from C20
- 8) Another name of ω -6 _____
- 9) Sphingolipid have (hydrophobic + polar head)
- 10) Base pairs are joined by H-bond.
- 11) Alanine shows greatest tendency to form α -helices in experimental model.
- 12) Arginine which has a positively charged guanidinium group.
- 13) Pka 14) 2/7 g/day - eff, stat, etc.
- 15) Titration is carried out to find pH.
- 16) When cholesterol is taken up by HDL it is esterified in hydrophobic

Remember me in your prayers...May Allah bless you...

Regards....

MARYAM SALEEM KHAWAJA...
