Talha Sajid

1. Breadth-first search is a good idea when you are confident that the branching factor is _____

- a) Extremely small
- b) Small**
- c) Medium
- d) Large

2. Another expert system named _____ was developed by Digital Equipment Corporation, as a computer configuration assistant.

- a) R1/XCON**
- b) MYCIN
- c) Dendral
- d) R3/XCON

3. General games involves _____

- a) single-agent
- b) multi-agent
- c) only single-agent and multi-agent**
- d) neither single-agent nor multi-agent

4. Adversarial search problems uses.

- a) competitive environment
- b) cooperative environment
- c) neither competitive nor cooperative environment
- d) an only competitive and cooperative environment

5. Genetic algorithms start with the population of randomly generated, attempted solutions to a problem and repeatedly do the following except _____.

- a) evaluate each attempted solutions
- b) keep the best solutions
- c) produce next generation using inheritance and mutation.
- d) perform non parallel search

6. What is Artificial Intelligence?

- a) Putting your intelligence into Computer
- b) Programming with your intelligence
- c) Making a Machine intelligent
- d) Playing a Game

7. An AI system must form a meaningful and useful _____ of internal information.

- a) Representation
- b) Execution
- c) Learning
- d) Planning

8. An AI system has a _____ component that allows the system to get information from its environment.

- a) Planning
- b) Perception**
- c) Learning
- d) Execution

9. Progressive deepening guarantees to find the solution at a minimum depth like

- a) DFS
- b) BFS**
- c) Both a and b
- d) None

10. In Adversarial search the goals of the adversaries are usually _____ to each other

- a) Contrary**
- b) Same
- c) Different
- d) None

11. To infer new information from semantic networks, we can ask questions from nodes.

- a) True**
- b) False

12. An expert system is different from conventional programs in the sense that program control and knowledge are_____.

a) Separate

- b) Defined
- c) Together
- d) Common

13. To create intelligent machines we first need to understand how the real

- a) introspection of mind
- b) psychological experiment
- c) brain functions**
- d) human body works

14. The Breadth-First Search traversal of a graph will result into?

- a) Linked List
- b) Tree**
- c) Graph with back edges
- d) Arrays

15. R1/XCON expert system was developed by?

- a) Digital Computer Corporation
- b) Digital Equipment Corporation**
- c) Computer accessories company
- d) DELL

16. In Depth-First Search, how many times a node is visited?

- a) Once

b) Twice

c) Equivalent to number of in degree of the node

d) Thrice

17. Which one of the following is involved in an ES development project:

a) The domain expert

b) The knowledge engineer

c) The end user

d) All of the given

18. Semantic networks are computationally expensive at _____

a) Run time

b) Compile Time

c) Start Time

d) End Time

19. _____ reasoning is based on forming, or inducing a „generalization“ from a limited set of observations.

a) Deductive

b) Abductive

c) Analogical

d) Inductive

20. _____ is the process of deriving logical conclusions from given facts.

a) Representation

- b) Execution
- c) Reasoning**
- d) Planning

21. Every graph can be converted into a_____.

- a) Tree**
- b) statement
- c) problem
- d) repeated cycle

22. Performance of an expert system is as compared to a human expert.

- a) High**
- b) Low
- c) Medium
- d) Average

23. A function by which we can tell which board position is nearer to our goal is called.

- a) Alternative function
- b) Recursive function
- c) Best function
- d) Fitness function**

24. Graphs and Networks allow incorporated.

- a) Relationships**
- b) pictures

- c) representation
- d) communication

25. Identify the correct step used to start designing an expert system.

- a) Feasibility study**
- b) Problem reorganization
- c) Scope study
- d) Rapid prototyping

26. Inductive learning is based on the knowledge that if something happens a lot it is likely to be generally_____

- a) True**
- b) False
- c) Ambiguous
- d) None of the given

27. If the antecedent is only partially true, then the output fuzzy set is truncated according to the _____ method

- a) Intrinsic
- b) Implication**
- c) Boolean
- d) None of the given

28. Choose the fields in which Fuzzy inference systems have been successfully applied:

- a) automatic control

- b) data classification
- c) decision analysis
- d) All of the given**

29. Usually a _____ graph is chosen to represent a fuzzy set.

- a) Triangular**
- b) Circular
- c) Conical
- d) None of the given

30. Reasoning in fuzzy logic is just a matter of generalizing the familiar _____ logic.

- a) Boolean**
- b) Complex
- c) Coognitive
- d) Supervised

31. In Genetic algorithm has the same notion of having something or some attribute from a parent while refers to a small random change.

- a) inheritance, mutation**
- b) DFS, BFS
- c) A*, Dynamic programming
- d) subtraction, multiplication

32. Back-propagation learning algorithm was invented by

- a) Bryson and Ho**

- b) John McCarthy
- c) Marvin Minsky
- d) Alan Turing

33. The simple idea behind is that if we can reach a specific node through more than one different paths then we shall take the path with the minimum cost.

- a) Dynamic programming**
- b) Estimates
- c) Progressive deepening
- d) Beam search

34. Which of the following is NOT one of the steps of simple search algorithm?

- a) Initialize priority queue.
- b) Check if the priority queue is empty.
- c) If node picked from priority queue is goal node then return.
- d) Copy visited queue to priority queue.**

35. The rules that define how conflict resolution will be used, and how other aspects of the system itself will run, are called_____.

- a) Meta rules
- b) Conflict resolution rules**
- c) Forward chain rules
- d) backward chain rules

36. Identify the TRUE statement regarding “Heuristics”:

- a) Heuristics always give us good guess to reach to goal state.
- b) Heuristics don't always give us good guess to reach to goal state.**
- c) Heuristics never give us good guess to reach to goal state.
- d) Both “heuristic” and “algorithm” are same thing.

37. The tractable problems are further divided into structured and _____ problems

- a) non-structured
- b) Complex**
- c) Easy
- d) Simple

38. “The branch of computer science that is concerned with the automation of intelligent behavior” this definition is from:

- a) Luger and Stubblefield**
- b) Winston
- c) Schalkoff
- d) Bellman

39. The ability to understand things without explicitly programmed a computer is called?

- a) Artificial Intelligence**
- b) Deep learning
- c) Machine learning
- d) Fuzzy logic

40. "In context of Hill climbing algorithm, a person may reach the portion of a mountain which is totally flat, whatever step he takes gives him no improvement in height hence he gets stuck." The above statement refers to:

- a) Foothill problem
- b) Plateau problem**
- c) Ridge problem
- d) Slope problem

41. The conference that launched the AI revolution in 1956 was held at?

- a) Harvard
- b) Dartmouth**
- c) New York
- d) Stanford

42. An expert system models the following aspect(s) of human expert

- a) Operators
- b) Implications
- c) Knowledge and reasoning**
- d) Operations

43. The machine has _____, it would have used its Knowledge to counter for this new situation in its environment.

- a) strong intelligence**
- b) weak intelligence
- c) efficient algorithms
- d) inference system

44. "In context of Hill climbing algorithm, you might just reach local maxima and think that you have reached the global maxima, so getting stuck in the middle of searching the solution space." The above statement refers to:

a) Foothill problem

- b) Plateau problem
- c) Ridge problem
- d) Slope problem

45. Solving the problem through genetic algorithm _____ on the number of iterations is usually used to end the process in finite time.

a) upper limit

- b) lower limit
- c) middle limit
- d) no limit

46. The ability to learn and recognize things automatically called?

a) Fuzzy logic

b) Intelligence

- c) Problem solving
- d) Defining the problem

47. Searching is a formal mechanism to explore

a) Alternatives

- b) Recursive
- c) Best
- d) Fitness

48. _____ is based on forming, or inducing a „generalization“ from a limited set of observations

a) Inductive reasoning

- b) Deductive reasoning
- c) Analogical reasoning
- d) Common-sense reasoning

49. “A computer program designed to model the problem solving ability of a human expert” is known as _____

a) Expert system

- b) Intelligent System
- c) Echo System
- d) Energy System

50. A _____ is „A person who posses the skill and knowledge to solve a specific problem in a manner superior to others“

a) The domain expert

- b) The knowledge engineer
- c) The end user
- d) All of the given

51. _____ are closely coupled components; each is intrinsically tied to the other.
i-Knowledge representation

ii-Reasoning

iii-Planning

iv-Execution

- a) ii & iii
- b) ii & iii
- c) iii & iv
- d) i & ii**

52. _____ can be viewed as the processor in an expert system.

- a) Inference engine**
- b) Working memory
- c) Knowledge base
- d) System memory

53. IF A THEN B

This can be considered to have a similar logical meaning as the following:

- a) $A \rightarrow B$**
- b) $A \leftrightarrow B$
- c) $A \leftarrow B$
- d) $B \leftrightarrow A$

54. If an arrow points from node "A" to Node "B" then, node "B" will be called:

- a) Child of node "A"**
- b) Parent of node "A"
- c) Branching node "A"
- d) Fan-out of node "A"

55. Some essential components of problem solving are Problem Statement, _____, Solution Space and Operators.

- a) Complex State
- b) Initial State
- c) Intermediate
- d) Goal State**

56. By getting grips on _____ that deal with searching techniques in graphs and trees, problem solving can be performed in an efficient manner.

- a) Pseudocode
- b) Algorithms**
- c) Charts
- d) Graphs

57. Which of the following is true?

- a) A graph may contain no edges and many vertices
- b) A graph may contain many edges and no vertices**
- c) A graph may contain no edges and no vertices
- d) A graph may contain no vertices and many edges

58. Variation in the offspring's(children) of the individuals are due to_____.

- a) Mutation
- b) Inheritance
- c) Both mutation and inheritance**

d) Crossover

59. Which of the following, is not a component of an expert system?

- a) Inference engine
- b) Knowledge-base
- c) User interface
- d) Template**

60. In search, rather than trying all possible search paths, we focus on paths that seem to be getting closer to goal state using some kind of “guide”.

- a) Heuristic**
- b) Uninformed
- c) Depth
- d) Progressive deepening

61. Which of the following is not considered being trait(s) of an expert?

- a) They possess specialized knowledge in certain area
- b) They possess experience the given area
- c) They can provide, upon elicitation, an explanation of their decisions
- d) They possess long term memory**

62. _____ can override the normal rules in expert systems.

- a) Meta rules**
- b) Conflict resolution rules
- c) Forward chain

d) Backward chain rules

63. The foothill problem occurs whenever there are _____ peaks.

- a) High
- b) Secondary**
- c) Primary
- d) Deep

64. The Plateau problem comes up when there is a mostly flat area _____ the peaks.

- a) Separating**
- b) Joining
- c) Over
- d) None of the given

65. Which one of the problem is more subtle, and consequently, is more frustrating:

- a) Foothill problem
- b) Plateau
- c) Ridge**
- d) Box

66. In Basic Genetic Algorithm the term mutation refers to a small random _____.

- a) Number
- b) Change**
- c) Operator
- d) Operand

67. Semantic networks are graphs, with nodes representing _____ and arcs representing _____ between objects.

a) objects, relationships

b) relationships, distance

c) objects, distance

d) distance, relationships

68. A proposition is the statement of a _____.

a) Fact

b) Equation

c) Action

d) Theorem

69. In backward chaining terminology, the hypothesis to prove is called the _____.

a) Proof

b) Goal

c) Plan

d) None of the given

70. The traveling inside a solution space requires something called as _____

a) Operands

b) Inner solution

c) Space solution

d) Operators

71. Genetic Algorithms is a search method in which multiple search paths are followed in_____

- a) Series
- b) Parallel**
- c) None of the give
- d) Sequential

72. Which of the following disciplines provides us with the theories of structure and meaning of language_____

- a) Linguistic**
- b) Philosophy
- c) Biology
- d) Psychology

73. In optimal path searches we try to find the _____ solution

- a) Least
- b) Worst
- c) Least but not worst
- d) Best**

74. . Which of the following command is used to see the added facts in CLIPS?

- a) (fact)
- b) Fact
- c) (facts)**

d) Deftemplate

75. Ability to tackle ambiguous and fuzzy problems demonstrate

a) Intelligence

- b) Non intelligence behavior
- c) Deep learning
- d) Machine leaning

76. We use graphs to represent problems and their _____

a) solution spaces

- b) knowledge base
- c) parameters
- d) nodes and vertices

77. “The process of working with knowledge, facts and problem solving strategies to draw conclusions”. The above statement refers to:

a) Reasoning

- b) Object-attribute-value triplet
- c) Refutation
- d) Conversion

78. In the sequence 2 6 8 3 4 5 3 1, where will the value of Q5 placed in eight queen problem?

- a) 2nd row and 1st column
- b) 7th row and 6th column
- c) 4th row and 5th column**

d) 3rd row and 2th column

79. "In context of Hill climbing algorithm, situation may arise when a step in one direction takes you lower, on the other hand when you step in some other direction it gives you no improvement." The above statement refers to:

- a) Foothill problem
- b) Plateau problem
- c) Ridge problem**
- d) Slope problem

80. Variable rule is matched with known facts and different possibilities for the variables are tested, to determine the truth of the fact, such rules are also called as_____ -

- a) Uncertain rules
- b) directive rules
- c) fuzzy rules
- d) Pattern-matching rules**

81. An AI system has a _____ component that allows the system to get information from its environment.

- a) Planning
- b) Perception**
- c) Learning
- d) Execution

82. In the worst case of semantic network, we may need to traverse the entire network and then discover that the requested info _____.

a) Does not exist

- b) Exists
- c) Is incorrect
- d) Is correct

83. A statement in conjunctive normal form (CNF) consists of _____

a) ANDs of Ors.

- b) ANDs
- c) Ors
- d) Ors of ANDs

84. What is the correct order for solving a problem using GA

I. Choose the best individuals from the population for crossover

II. Choose initial population

III. Evaluate the fitness of each individual

- a) I,II,III
- b) I,III,II
- c) II,I,III
- d) II,III,I**

85. Intelligence is the characteristics of:

a) Living things

- b) All things
- c) None of them

d) All of them

86. Which of the following command is correct for adding numbers in CLIPS?

- a) CLIPS>(3+4)
- b) CLIPS> (+ 3 4)**
- c) CLIPS>(34_)
- d) CLIPS> (+ 34+)

87. If Alpha implies beta is true and beta is known to be not true. Then alpha could not have been true. This rule refers as:

- a) Modus ponens
- b) Modus tollens**
- c) And-Introduction
- d) And-Elimination

88. Page No. 126 (HANDOUTS) LISP was created by?

- a) Alan Turning
- b) Marvin Minsky
- c) John McCarthy**
- d) Allen Newell and Herbert Simon

89. The searching technique in which we purely use a hit and trial approach and will check all combinations till one takes it to the exact solution is referred to as

.

a) Blind/uninformed

- b) Informed/heuristic
- c) Path/non-optimal
- d) Optimal path

90. In GA, the random process is repeated until an individual with required _____ level is found.

- a) Higher
- b) Lower
- c) Fitness**
- d) Logical

91. To which depth does the alpha-beta pruning can be applied?

- a) 10 states
- b) 8 states
- c) 6 states
- d) Any depth**

92. "The branch of computer science that is concerned with the automation of intelligent behavior" this definition of AI is from.

- a) Charniak and McDermott
- b) Winston
- c) Luger and Subblefiled**
- d) Bellman

93. The plateau comes up when there is a mostly flat area _____ the peaks.

- a) Separating**
- b) Joining
- c) Over
- d) None of the given

94. In backward chaining terminology, the hypothesis to proved is called_____.

- a) Proof**
- b) Goal
- c) Plan
- d) None of the given

95. Procedures that search the solution space in an uninformed manner are usually costly with respect to_____.

- a) Time
- b) Space
- c) Time and space both**
- d) None of the given

96. _____Reasoning is based on forming, or inducing a 'generalization' from a limited set of observations.

- a) Deductive
- b) Abductive
- c) Analogical
- d) Inductive**

97. Intelligence is the ability to_____ -

- a) Think / learn/Plan/ Schedule
- b) Recognize / Remember
- c) Problem Solving
- d) All of the Above

98. The traveling inside solution space requires something called_____.

- a) Problem Statement
- b) Operands
- c) Operators**
- d) Solution Space

99. Try to catch out own thoughts as they go by is

- a) Introspection**
- b) Psychology
- c) Both of above
- d) None of the above

100. Answering the Sequence Problem need

- a) Intelligence**
- b) Ability to make plan
- c) Ability to schedule
- d) None of the given

101. Within an expert system, the _____ contains facts about a specific subject area and rules that express the reasoning procedures of an expert on the subject.

- a) Inference engine
- b) Knowledge engineer
- c) Knowledge base**
- d) None of the given options

102. In some cases, the rules provide more definite actions such as “move left” or “close door”, in which case the rules are being used to represent _____.

- a) Recommendations
- b) Directives (Artificial Intelligence, 3/E)**
- c) Relations
- d) None of the given options

103. Expert system can be expressed as:

- a) It provides tools for the management, delivery, tracking, and assessment of various types of employee learning and training
- b) The set of business processes, culture, and behavior required to obtain value from investments in information systems
- c) Used for finding the optimal solution for a specific problem by examining a very large number of possible solutions for that problem
- d) Intelligent technique for capturing tacit knowledge in a very specific and limited domain of human expertise, this knowledge is converted to rules that can be used throughout the entire organization**

104. From discipline of _____ we have the tools and techniques to investigate the human mind and ways to represent the resulting theories

- a) Computer Science
- b) Biology
- c) Mathematics
- d) Psychology**

105. Please choose one Intelligence is the characteristic of _____

- a) Living being**
- b) All things
- c) None of them
- d) All of them

106. Identify the correct step used to start design of an expert system.

- a) Feasibility study**
- b) Problem reorganization
- c) Scope study
- d) Rapid prototyping

107. Reasoning in backward chaining is known as:

- a) Data-driven reasoning
- b) Rule-driven reasoning
- c) Intelligence-driven reasoning
- d) Goal-driven reasoning**

108. Expert system technique where a hypothesis is given at the beginning and the inference engine proceeds to ask the user questions about selected facts until the hypothesis is either confirmed or denied.

- a) Network Knowledge
- b) Data mining
- c) Backward chaining**
- d) Forward chaining

109. According to Haugeland intelligence systems are_____.

- a) think like humans**
- b) act like humans
- c) behave like an abnormal man
- d) behave like humans

110. Which of the following is a valid example which represents a suitable antecedent in a rule?

- a) IF $x > 3$
- b) IF name is "Bob"
- c) IF weather is cold
- d) All of the given options**
