Mth601

Quiz No.4 Jan2026

VU Zone | Iqra Azhar Official

Our Services

- LMS Handling (All Subjects)
- Assignments (All Subjects)
- Quizzes & GDBs (All Subjects)
- Lecture Views Assistance
- Online Book Shop
- Seminar
- Project Handling (All Types of Projects - CS, Management, English, Math, and more)
- Internship /Organizational Reports (All

90% To 100% Marks

1. Which of the following method is used to find the initial basic feasible solution of a transportation problem?

- All above methods are applicable Correct
- Vogel's approximation Method
- North West Corner Method
- Least Cost's Method

2. You realize that a row's total supply cannot fully satisfy the demand in any column. This means that_____.

- You must add transportation costs to increase supply.
- The original transportation problem has no feasible solution. Correct
- You can ignore this row and continue.
- You have made an error in earlier allocations.

VU ZONE WITH IQRA AZHAR

3. What is the significance of selecting the row or column with the largest penalty in VAM?

- It indicates the highest transportation cost
- It represents the maximum supply or demand
- It denotes the final allocation step
- It prioritizes the allocation to minimize penalties Correct

4. The Transportation and Transshipment Models are types of ---------- models.

- Variation
- Network Correct
- Inventory
- Allocation

5. In North West Corner Rule, we start initially from which of the following cell in the standard transportation table?

- From any arbitrary cell in first row

VU ZONE WITH IQRA AZHAR

- Upper left Correct
- Upper middle
- Upper right

6. For an unbalanced Transportation problem, if the total demand is LESS than total supply then which of the following is true in order to balance the problem?

- One constraint will have to add
- A dummy source would have to include with supply equal to shortage
- A dummy sink would have to include with demand equal to the surplus Correct
- One constraint will have evacuate

7. In the Vogel's approximation Method for solving a Transportation problem, Penalty measure for any row or column, is given by which of the following?

VU ZONE WITH IQRA AZHAR

- Difference between any two arbitrary costs in the same row(column)
- Difference between the largest unit cost to the next largest cost in the same row(column)
- Difference between the Largest unit cost to the smallest unit cost in the same row(column)
- Difference between the smallest unit cost to the next smallest cost in the same row(column) Correct

8. If Primal Problem is a maximization problem, then the dual will be -------

- minimization Problem Correct
- maximization Problem
- mixed Problem
- none of the above

9. In the Least Cost Method, for any cell both demand and supply are satisfied then which of the following will be crossed out?

VU ZONE WITH IQRA AZHAR

- Both row and column
- Only column
- Either of row or column Correct
- Only row

10. For an unbalanced Transportation problem, if the total demand is MORE than total supply then which of the following is true in order to balance the problem?

- A dummy sink would have to include with demand equal to the surplus
- A dummy source would have to include with supply equal to shortage Correct
- One constraint will have to add
- One constraint will have evacuate
