PAID VU LMS HANDLING by Mam Mehwish 03184148783

Past Papers for Mids./Finals are also Available

1. In case the cost elements of one or two cells are not given in the problem, it means that:

Options:

a) Allocate very high cost element to those cells

b) We can allocate zeros to those cells

c) The given problem is wrong

d) The routes connected by those cells are not available

Correct Option: b) We can allocate zeros to those cells

2. Which of the following method to find the solution of a Transportation Problem can be observed as an improved version of Least Cost Method?

Options:

a) North West Corner Method

b) Vogel's approximation Method

Correct Option: b) Vogel's approximation Method

3. If Primal Problem is a maximization problem, then the dual will be:

Options:

a) Maximization Problem

b) None of the above

c) Mixed Problem

d) Minimization Problem

Correct Option: d) Minimization Problem

MAM MEHWISH 03184148783

4. For calculating the penalty cost of a row in Vogel's approximation method, if the smallest element is '3' and other elements are 3, 4, 5 then which of the following will be taken as next highest?

Options:

a) 3

b) 4

c) 5

d) 6

Correct Option: d) 6

5. Transportation problem is basically a:

Options:

a) Iconic model

b) Maximization model

c) Minimization model

d) Minimization model

Correct Option: c) Minimization model

6. In North West Corner method, the first step after choosing the appropriate cell in 1st row, we allocate:

Options:

a) So that the capacity of first row or first column is exhausted.

b) As least as possible

c) Any arbitrary quantity

d) As much as possible

Correct Option: d) As much as possible

7. The row, which is introduced in the matrix to balance an unbalanced Transportation problem, is known as:

Options:

a) Idle row

MAM MEHWISH 03184148783

b) Key rows

c) Slack row

d) Dummy row

Correct Option: d) Dummy row

8. In North West Corner Rule, we start initially from which of the following cell in the standard transportation table?

Options:

a) From any arbitrary cell in first row

b) Upper left

c) Upper middle

d) Upper right

Correct Option: b) Upper left cell.

9. Under which of the following condition in the Least Cost Method, after first allocation in cell (1,1), next allocation along the diagonal in cell (2,2) can be made?

Options:

a) If after crossed out 1st row or 1st column, cell (2,2) is of minimum cost

b) Total Supply is not equal to Total Demand

c) Total Supply = Total Demand

d) If in the second row and second column, each resource and sink contain equal units

Correct Option: d) If in the second row and second column, each resource and sink contain equal units

1. Transportation problem is basically a:

- A) Maximization model

- B) Iconic model

- C) Transshipment problem

- D) Minimization model

- **Correct Option: D) Minimization model**

MAM MEHWISH 03184148783

2. The row, which is introduced in the matrix to balance an unbalanced Transportation problem, is known as:

- A) Slack row
- B) Dummy row
- C) Key row
- D) Idle row
- **Correct Option: B) Dummy row**

3. For a Transportation problem, after finding the initial basic feasible solution, which of the following method is used to find the optimum solution?

- A) Least Cost Method
- B) None of these
- C) Vogel's approximation Method
- D) North West Corner Method
- **Correct Option: C) Vogel's approximation Method**

4. If in the primal problem, there are 2 variables and 3 constraints and the elements of the right-hand side of the constraints are 200, 567, 987 respectively, then its dual objective function is:

- A) None of these
- B) Prime primal
- C) Dual
- D) Prime dual
- **Correct Option: A) None of these**

5. Primal of a dual is:

- A) Prime primal
- B) Dual
- C) Prime dual
- D) Primal

MAM MEHWISH 03184148783

- **Correct Option: D) Primal**

6. While solving a Transportation problem by Vogel's approximation method, if the row has two elements of the same magnitude say 'x' as the smallest element then the opportunity (penalty) cost of that row or column is:

- A) Zero
- B) x^2
- C) xx
- D) x
- **Correct Option: A) Zero**

7. In the Least Cost Method, for any cell both demand and supply are satisfied then which of the following will be crossed out?

- A) Only column
- B) Both row and column
- C) Only row
- D) Either of row or column
- **Correct Option: C) Only row**

8. The amounts shipped from a dummy source represent shortages at the receiving destinations.

- A) False
- B) True
- **Correct Option: A) False**

9. Which of the following reasons to prefer Vogel's approximation method over other two methods?

- A) Vogel's method gives the shortest transportation route
- B) Vogel's method gives the feasible solution near to the optimal
- C) Vogel's method allocates the minimum amount to the variable with the least unit cost
- D) Vogel's method gives the optimal time plan of transportation

MAM MEHWISH 03184148783

- **Correct Option: C) Vogel's method allocates the minimum amount to the variable with the least unit cost**

10. In North West Corner Rule, we start initially from which of the following cell in the standard transportation table?

- A) Upper middle
- B) From any arbitrary cell in the first row
- C) Upper right
- D) Upper left
- **Correct Option: D) Upper left**

1. For North West Corner method, in the first row and first column, resource and sink contain '5' and '7' units respectively; then after allocating the appropriate amount 'x11' in the cell (1,1), we will move towards which of the following cell?

Options:

A) (1,2)

B) (5,2)

C) (2,2)

D) (2,1)

Correct Answer: A) (1,2)

2. Graphically, in case of optimal degenerate solution, feasible solution always exists at corner points ----------.

Options:

A) except at both axes

B) lie on any axis

C) neither in (1,2) nor in (2,1) but in along the diagonal in (2,2)

MAM MEHWISH 03184148783

D) Arbitrarily chosen either in (1,2) or in (2,1)

Correct Answer: B) lie on any axis

3. For North West Corner method, in the first row and first column, each resource and sink contain ‘5’ units; then after allocating the appropriate amount ‘x11’ in the cell (1,1), in which of the following cell the next allocation will be zero?

Options:

A) In cell (1,2) only

B) Neither in (1,2) nor in (2,1) but in along the diagonal in (2,2)

C) Arbitrarily chosen either in (1,2) or in (2,1)

D) In cell (2,1) only

Correct Answer: B) Neither in (1,2) nor in (2,1) but in along the diagonal in (2,2)

4. In North West Corner Rule, we start initially from which of the following cell in the standard transportation table?

Options:

A) Upper right

B) Upper middle

C) Upper left

D) From any arbitrary cell in the first row

Correct Answer: C) Upper left

5. A balanced transportation model with ‘5’ number of sources and ‘7’ destinations has -------- number of constraint equations.

MAM MEHWISH 03184148783

Options:

A) 2

B) 10

C) 12

D) 35

Correct Answer: C) 12

6. In North West Corner method, in the first row and first column, available resource and sink contain ‘5’ and ‘7’ units respectively; then which of the following amount ‘x11’ will be allocated in the cell (1,1)?

Options:

A) Max(5,7) = 7

B) Min(5,7) = 5

C) Average(5,7) = 6

D) Min(5,7-5) = 2

Correct Answer: B) Min(5,7) = 5

7. Despite of minimizing the cost of Transportation, if we want to maximize the profit then which of the following modification would have to do?

Options:

A) Divide all the cost coefficients in Transportation matrix by minimum cost coefficient

B) Add ‘1’ from all the cost coefficients in Transportation matrix

C) Subtract ‘1’ from all the cost coefficients in Transportation matrix

D) Multiply ‘–1’ to all the cost coefficients in Transportation matrix

Correct Answer: D) Multiply ‘–1’ to all the cost coefficients in Transportation matrix

MAM MEHWISH 03184148783

8. In case the cost elements of one or two cells are not given in the problem, it means that ----------

Options:

A) the given problem is wrong

B) allocate very high cost element to those cells

C) the routes connected by those cells are not available

D) we can allocate zeros to those cells

Correct Answer: C) the routes connected by those cells are not available

9. Transportation problem is basically a ----------

Options:

A) Transshipment problem

B) Iconic model

C) Minimization model

D) Maximization model

Correct Answer: C) Minimization model

10. The North – West Corner Rule Is used to find an initial feasible solution

Options:

A) Is used to find optimal solution

B) Is used to find optimal solution

C) Is based on the concept of minimizing opportunity cost.

D) None of above

MAM MEHWISH 03184148783

Correct Answer: A) Is used to find an initial feasible solution
