In order to test a solution for optimality in a transportation problem, it must have:
Select the correct option
Reload Math Equations
At least one allocation in every row and column.
Exactly (m + n - 1) occupied cells.
Zero cost for all non-allocated cells.
The same number of supply and demand points.

Question # 6 of 10 (Start time: 12:50:10 PM, 04 January 2025)
Total Marks: 1
Under which of the following condition in the Least Cost Method, after first allocation in cell (1,1), next allocation along the diagonal in cell (2,2) can be made?
Select the correct option
If Total Supply is not equal to Total Demand
If after crossed out 1st row or 1st column, cell (2,2) is of minimum cost
Total Supply = Total Demand
If in the second row and second column, each resource and sink contain equal units
