In the assignment problem, the cost matrix is ----------.

Select the correct option

- rectangular
- non-singular
- singular
- square

For North West Corner method, in the first row and first column, each resource and sink contain '5' units; then after allocating the appropriate amount 'x11' in the cell (1,1), in which of the following cell the next allocation will be zero?

Select the correct option

- Neither in (1,2) nor in (2,1) but in along the diagonal in (2,2)
- In cell (1,2) only
- In cell (2,1) only
- Arbitrarily chosen either in (1,2) or in (2,1)

LEARNING HELP BY WAQAS QURESHI

There always exists a non-degenerate Feasible solution of a Balanced Transportation Problem.

Select the correct option

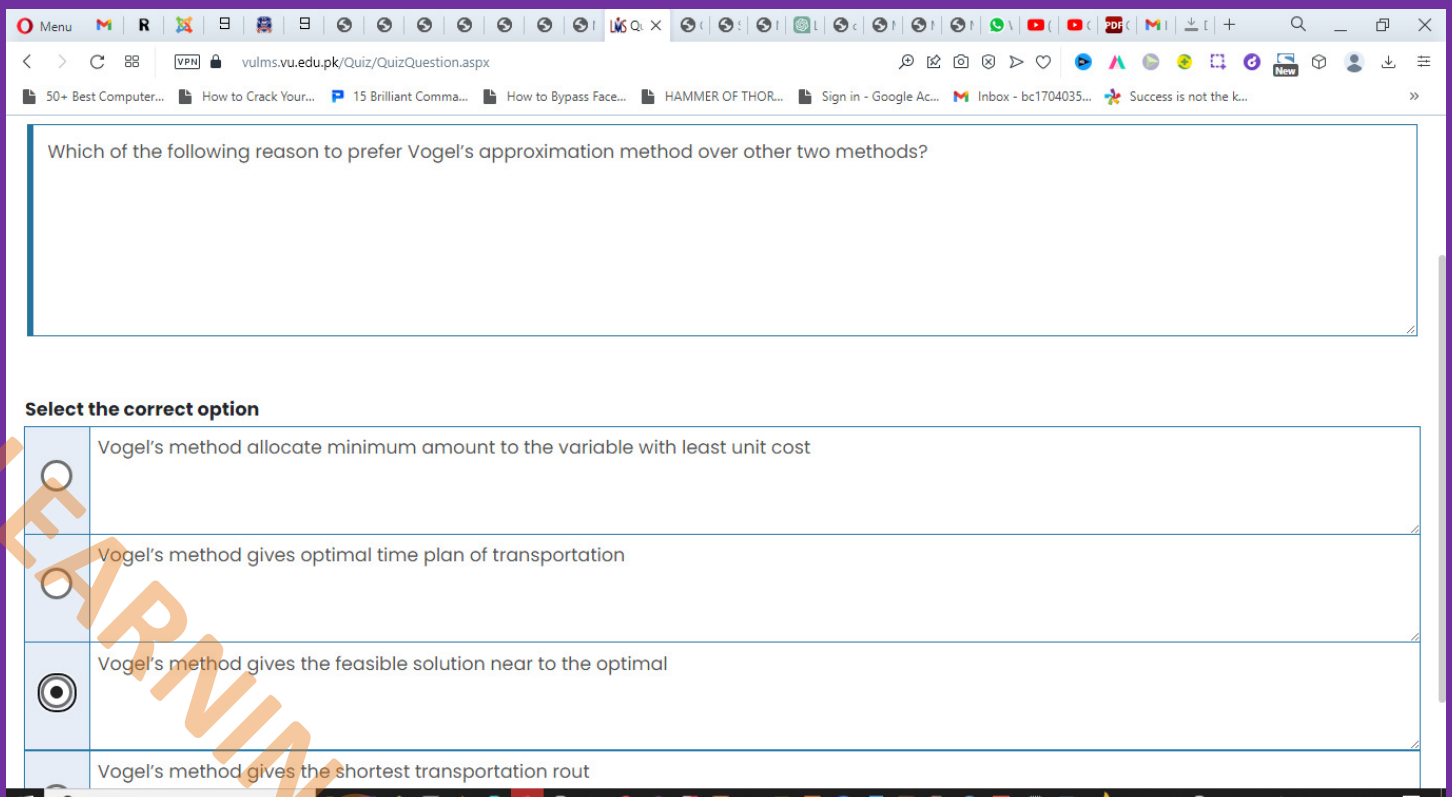

- False
- True

In the Vogel's approximation Method for solving a Transportation problem, Penalty measure for any row or column, is given by which of the following?

Select the correct option

- Difference between any two arbitrary costs in the came row(column)
- Difference between the Largest unit cost to the smallest unit cost in the came row(column)
- Difference between the smallest unit cost to the next smallest cost in the same row(column)
- Difference between the largest unit cost to the next largest cost in the same row(column)

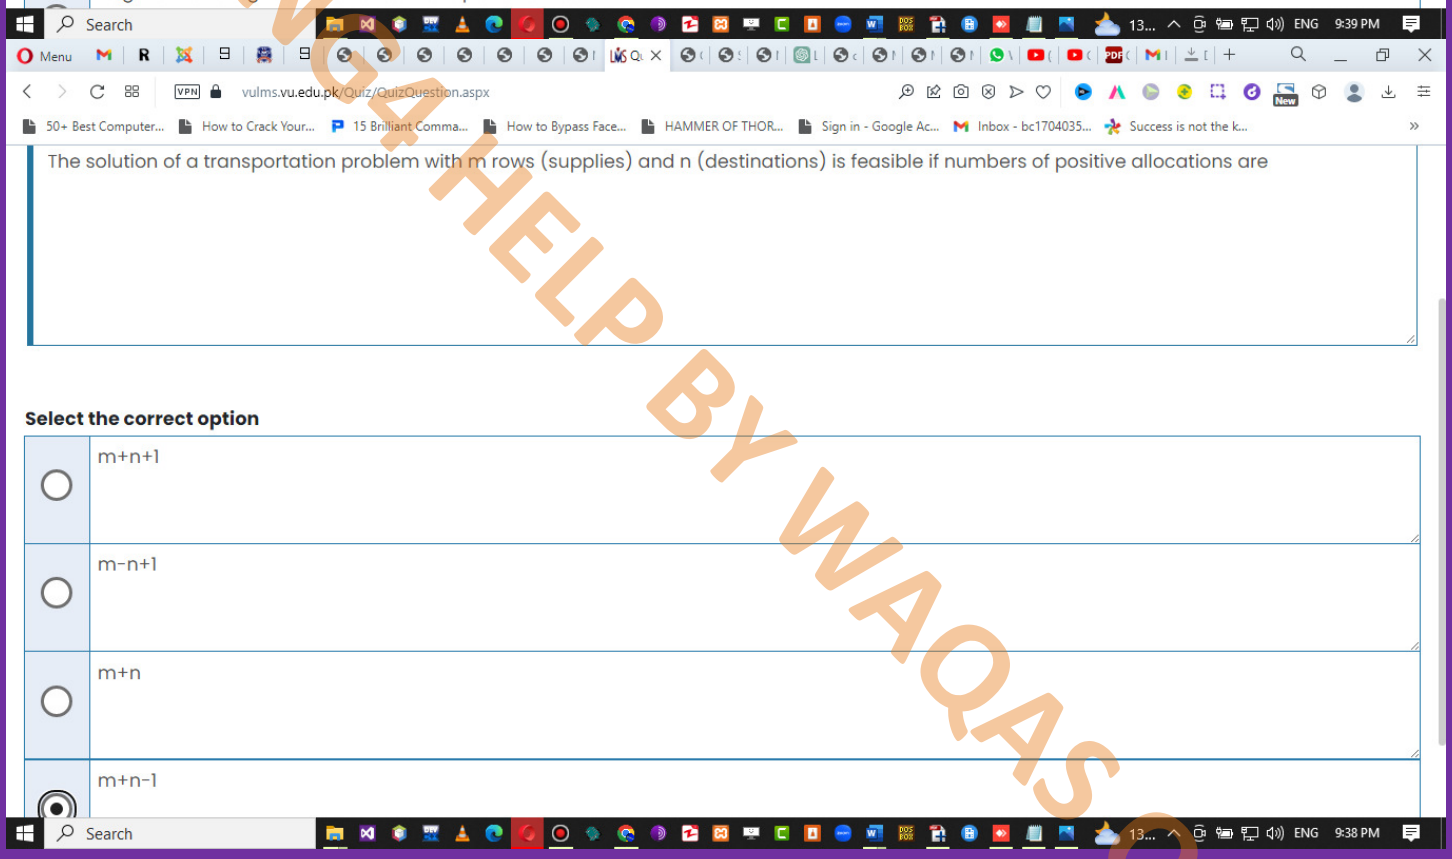

LEARNING4 HELP BY WAQAS QURESHI

Which of the following reason to prefer Vogel's approximation method over other two methods?

Select the correct option

- Vogel's method allocate minimum amount to the variable with least unit cost
- Vogel's method gives optimal time plan of transportation
- Vogel's method gives the feasible solution near to the optimal
- Vogel's method gives the shortest transportation rout

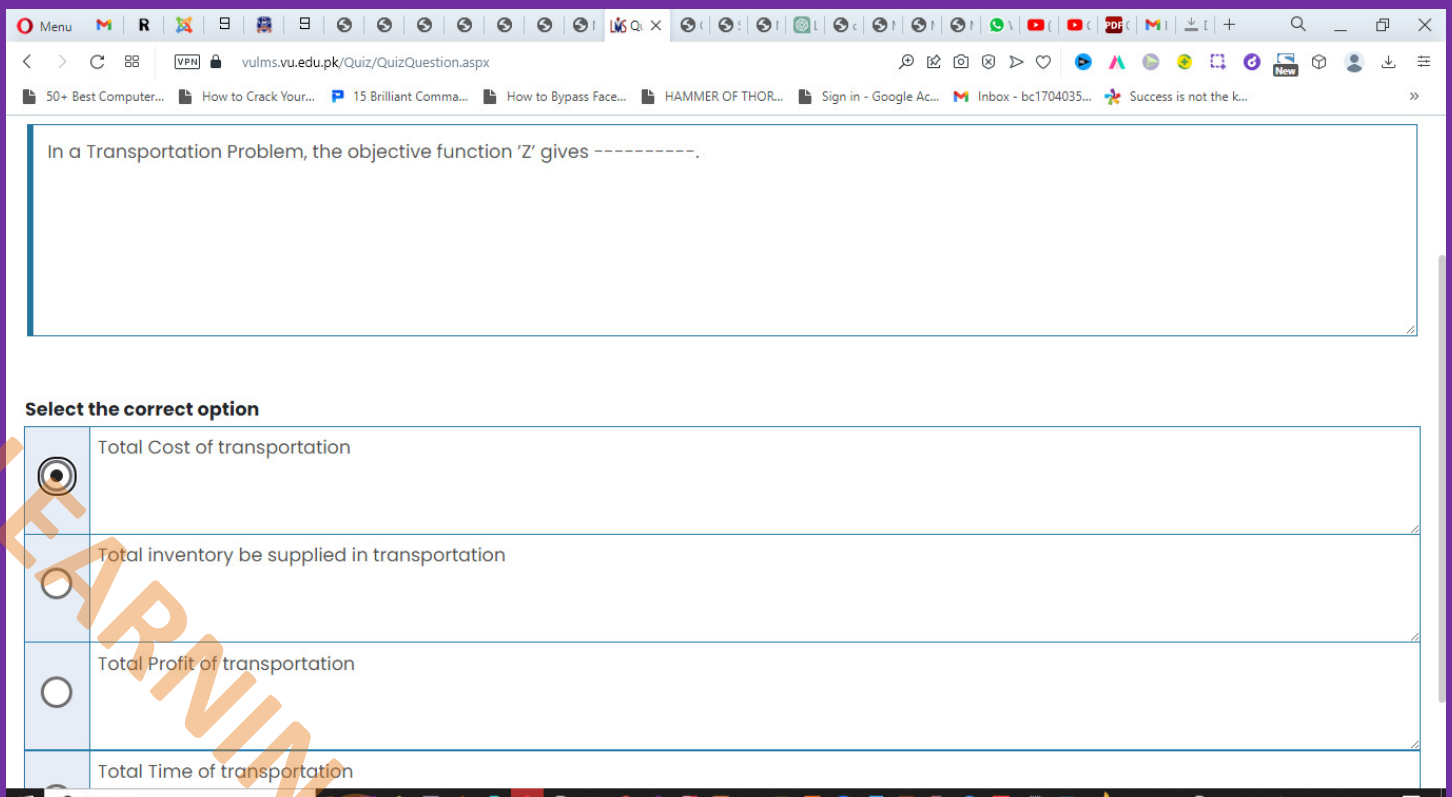

The solution of a transportation problem with m rows (supplies) and n (destinations) is feasible if numbers of positive allocations are

Select the correct option

- m+n+1
- m-n+1
- m+n
- m+n-1

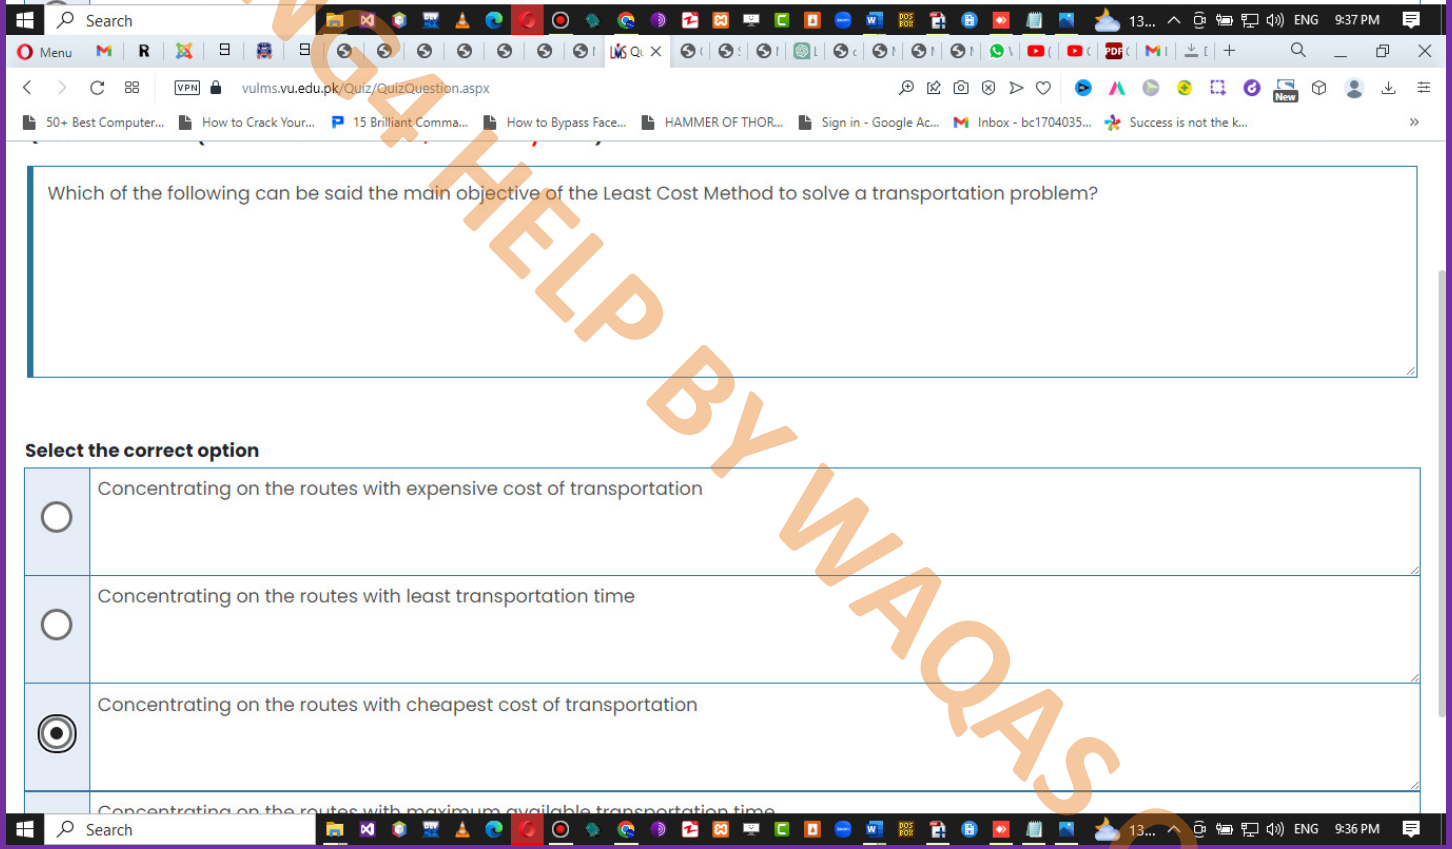

LEARNING4 HELP BY WAQAS QURESHI

In a Transportation Problem, the objective function 'Z' gives ----------.

Select the correct option

- Total Cost of transportation
- Total inventory be supplied in transportation
- Total Profit of transportation
- Total Time of transportation

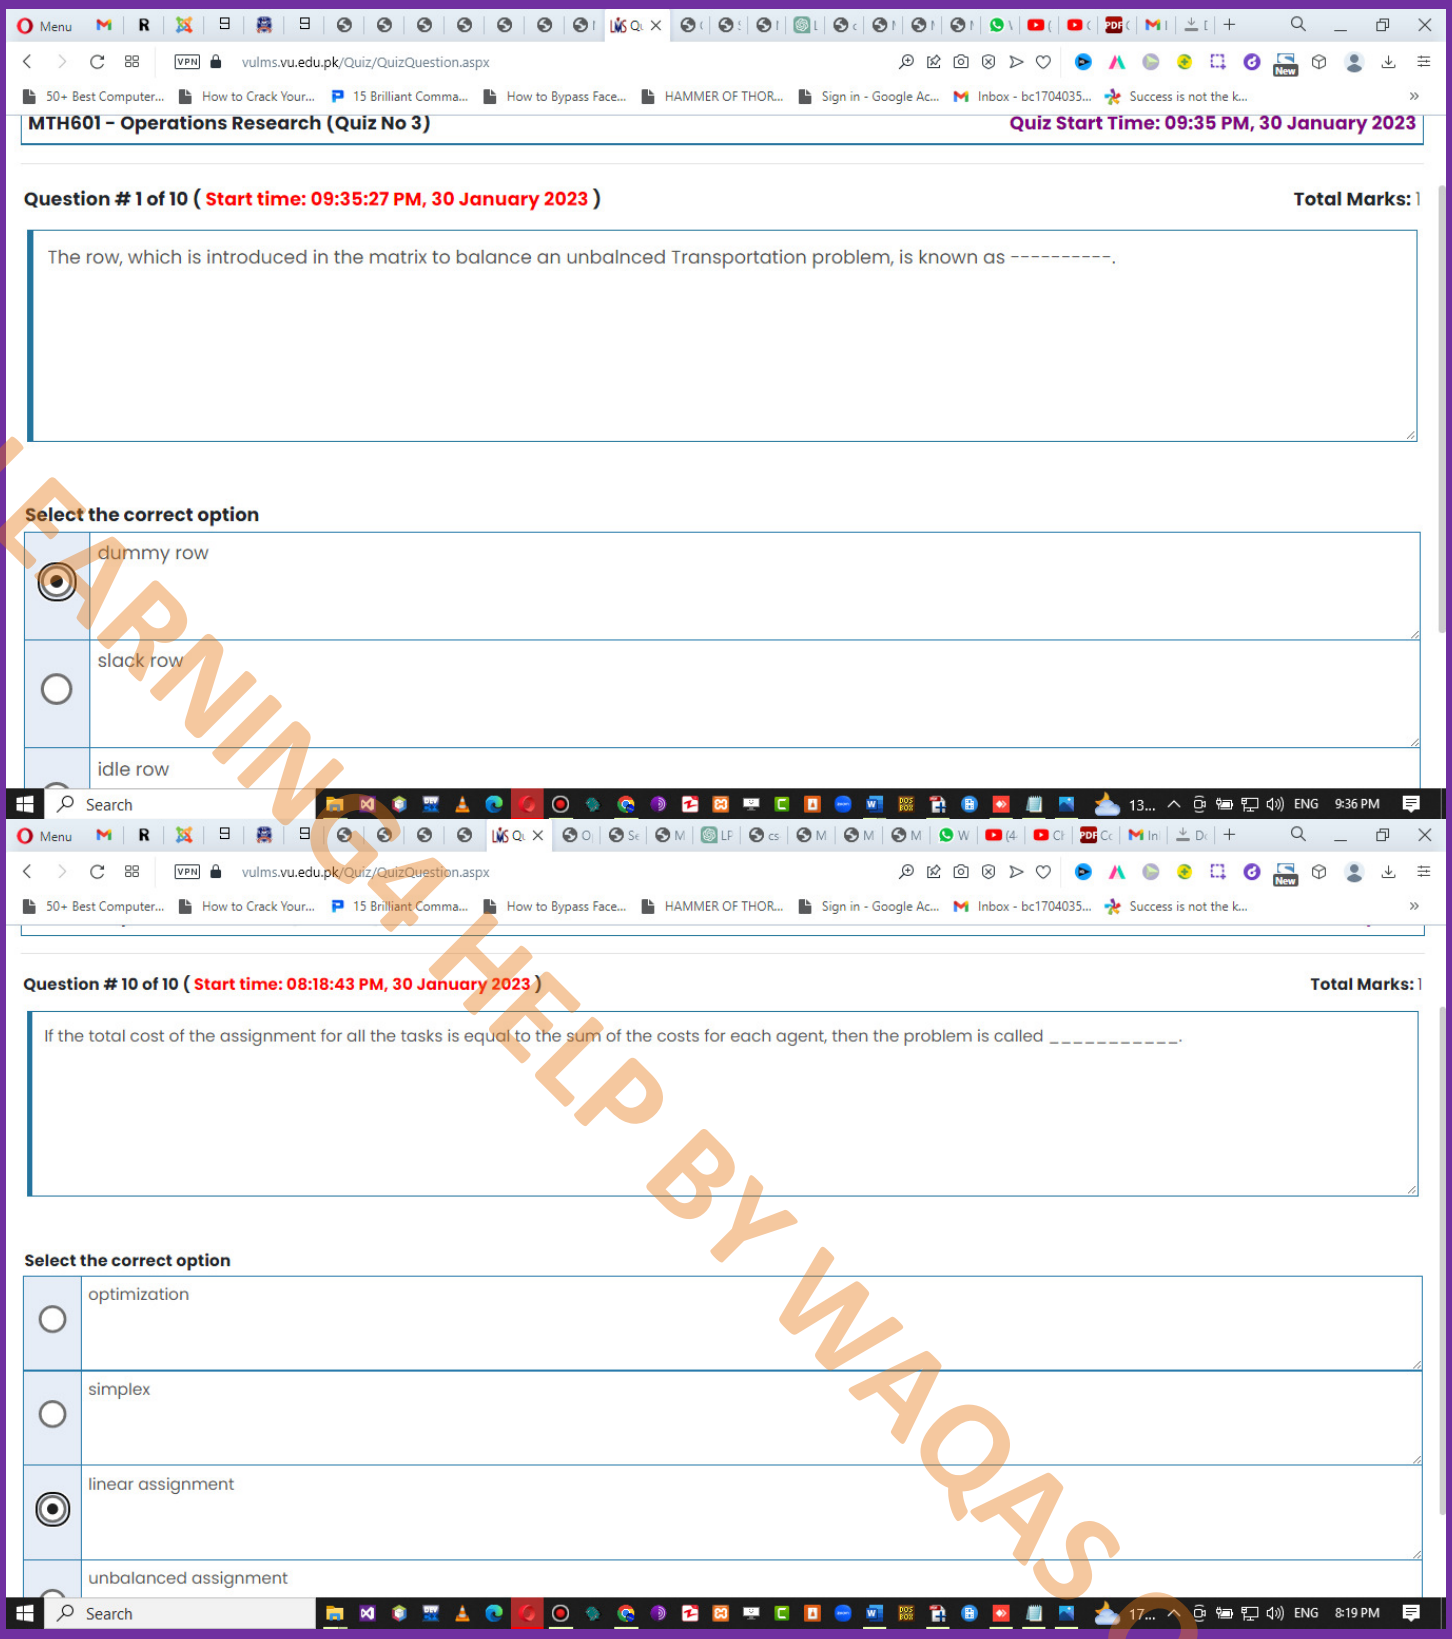

Which of the following can be said the main objective of the Least Cost Method to solve a transportation problem?

Select the correct option

- Concentrating on the routes with expensive cost of transportation
- Concentrating on the routes with least transportation time
- Concentrating on the routes with cheapest cost of transportation
- Concentrating on the routes with maximum available transportation time

MTH601 - Operations Research (Quiz No 3) Quiz Start Time: 09:35 PM, 30 January 2023

Question # 1 of 10 (Start time: 09:35:27 PM, 30 January 2023) **Total Marks:** 1

The row, which is introduced in the matrix to balance an unbalnced Transportation problem, is known as ----------.

Select the correct option

- dummy row
- slack row
- idle row

Question # 10 of 10 (Start time: 08:18:43 PM, 30 January 2023) **Total Marks:** 1

If the total cost of the assignment for all the tasks is equal to the sum of the costs for each agent, then the problem is called _____.

Select the correct option

- optimization
- simplex
- linear assignment
- unbalanced assignment

LEARNING4 HELP BY WAQAS QURESHI

In North West Corner Rule, we start initially from which of the following cell in the standard transportation table?

Select the correct option

- Upper middle
- Upper right
- Upper left
- From any arbitrary cell in first row

In a Transportation problem, which of the following are taken as the coefficients of unknown "x_{ij}'s" ?

Select the correct option

Reload Math Equations

- Zeros
- Zeros or ones
- Any arbitrary non-negative integer
- Ones

Click to Save Answer & Move to Next Question

LEARNING4 HELP BY WAQAS QURESHI

When the total allocations in a transportation model of m*n size is not equals to "m + n – 1", the situation is known as:

Select the correct option

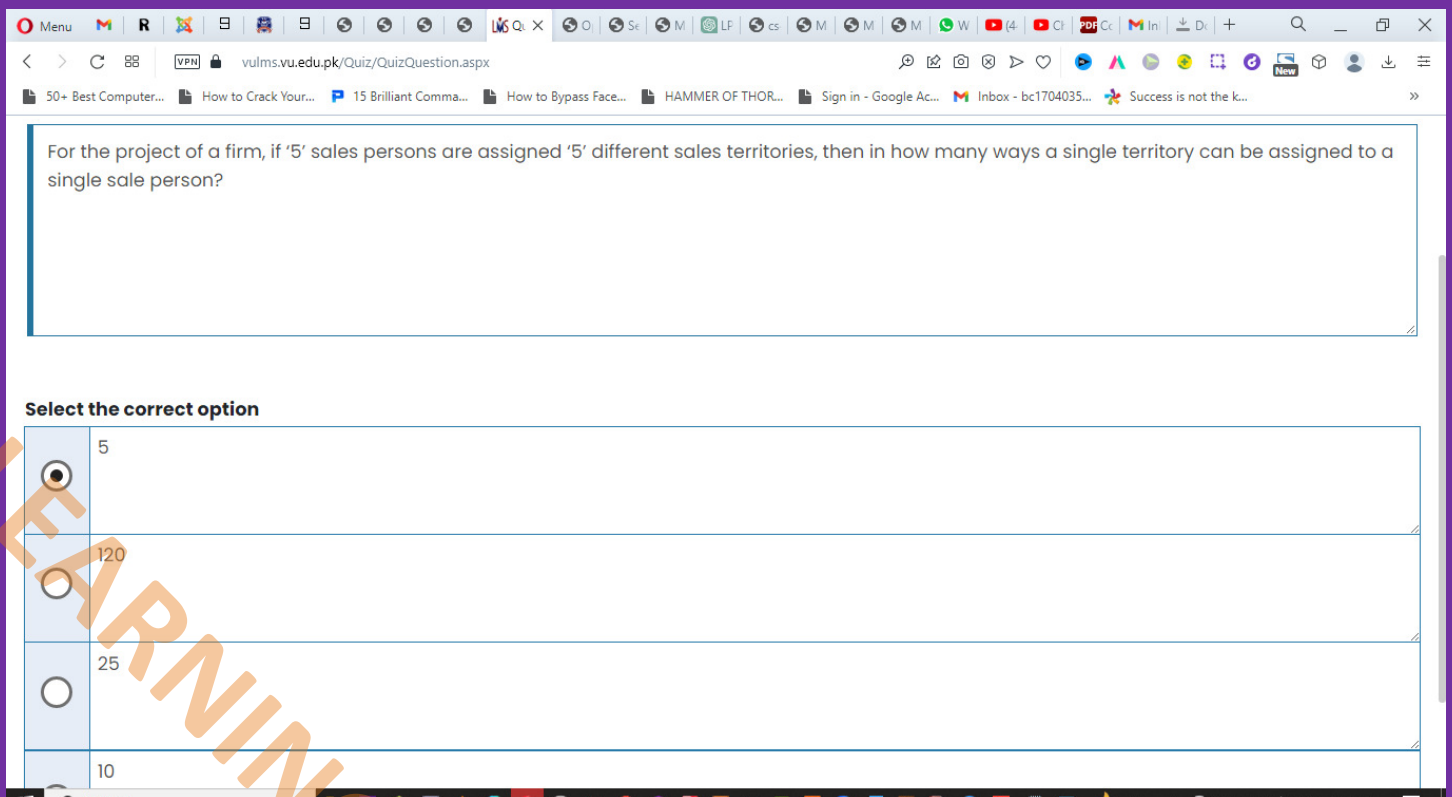

- Unbalanced situation
- Tie situation
- None of the above
- Degeneracy

For North West Corner method, in the first row and first column, each source and sink contain '5' units ; then after allocating the appropriate amount 'x11' in the cell (1,1), we will move towards which of the following cell?

Select the correct option

- Arbitrarily either towards (1,2) or (2,1)
- Neither towards (1,2) nor (2,1) but move diagonally towards (2,2)
- Towards (2,1) if 2nd row contains more occupied cells than 1st row
- Towards (1,2) if 1st row contains more occupied cells than 2nd row

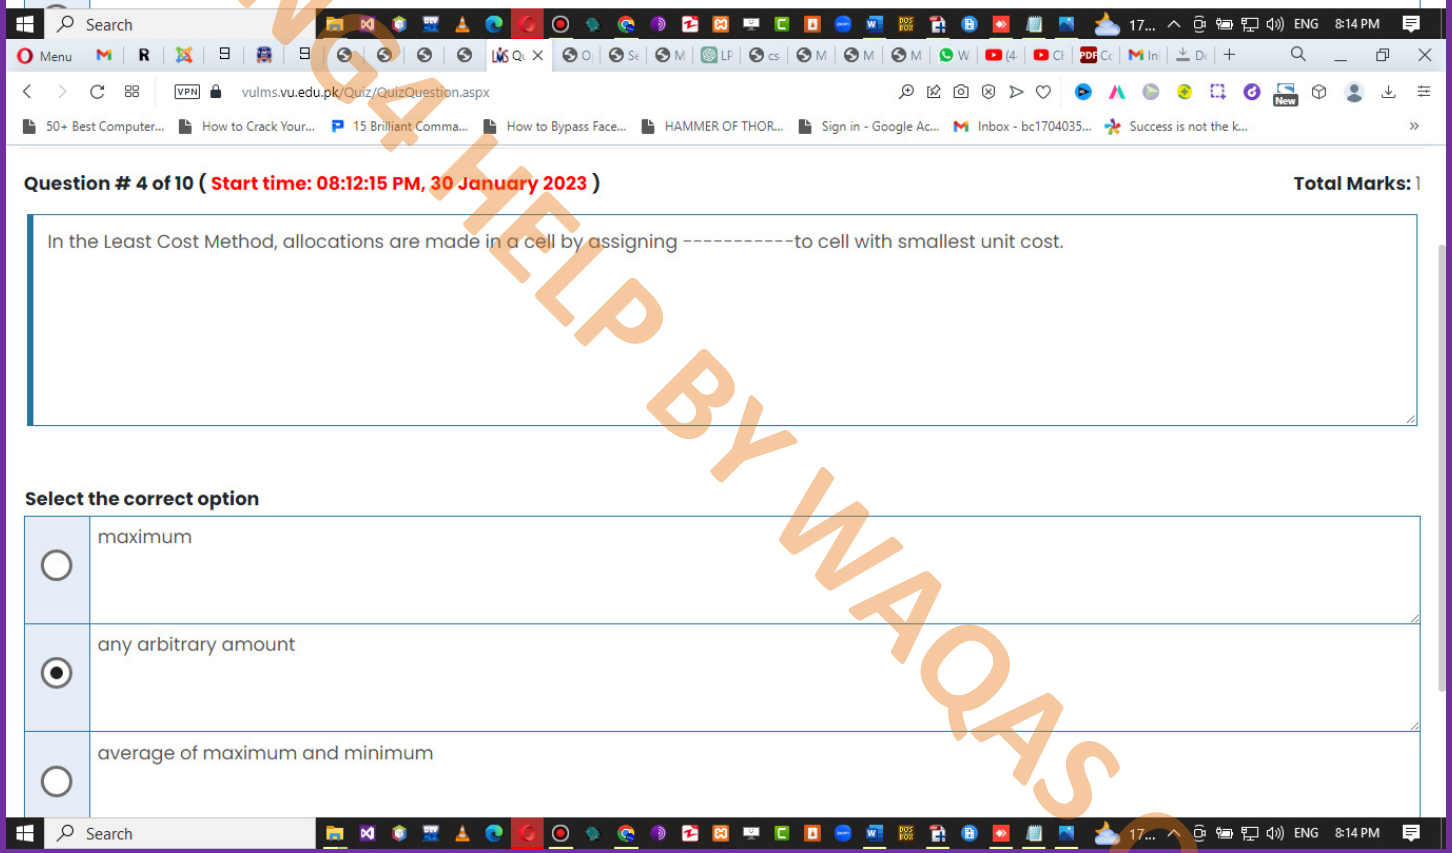

LEARNING4 HELP BY WAQAS QURESHI

For the project of a firm, if '5' sales persons are assigned '5' different sales territories, then in how many ways a single territory can be assigned to a single sale person?

Select the correct option

- 5
- 120
- 25
- 10

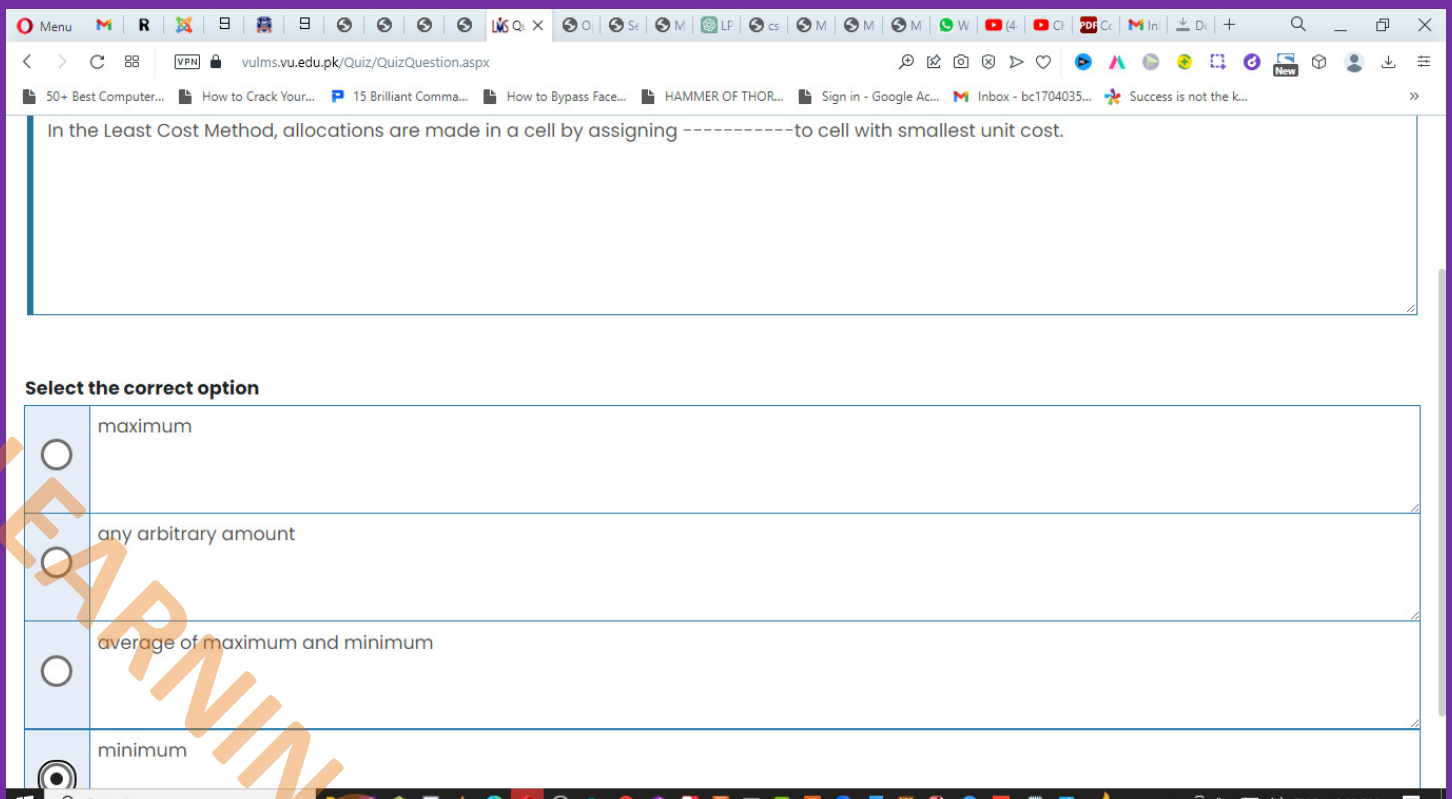

Question # 4 of 10 (Start time: 08:12:15 PM, 30 January 2023) **Total Marks:** 1

In the Least Cost Method, allocations are made in a cell by assigning ----------to cell with smallest unit cost.

Select the correct option

- maximum
- any arbitrary amount
- average of maximum and minimum

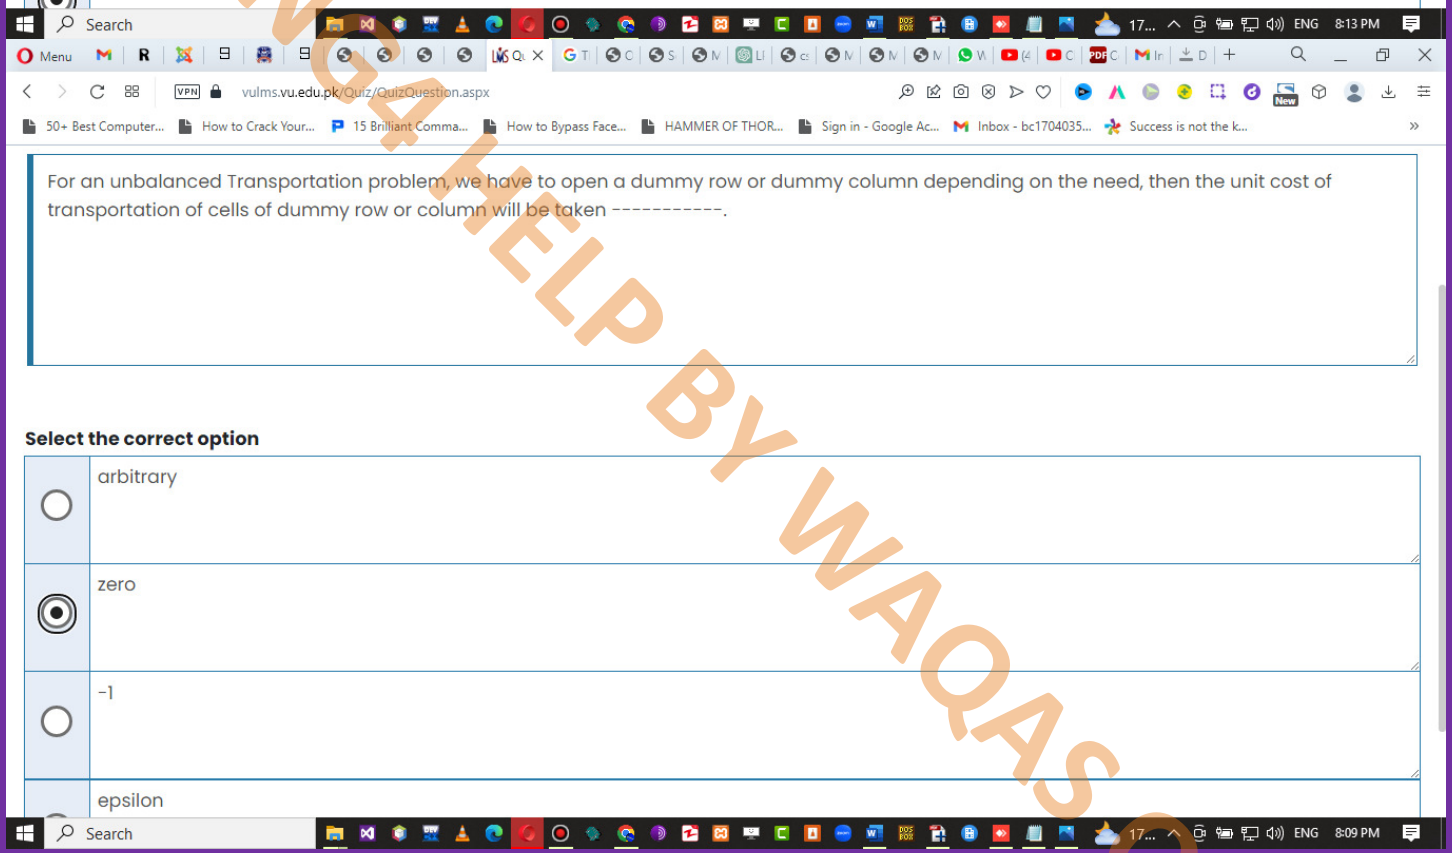

LEARNING4 HELP BY WAQAS QURESHI

In the Least Cost Method, allocations are made in a cell by assigning ----------to cell with smallest unit cost.

Select the correct option

- maximum
- any arbitrary amount
- average of maximum and minimum
- minimum

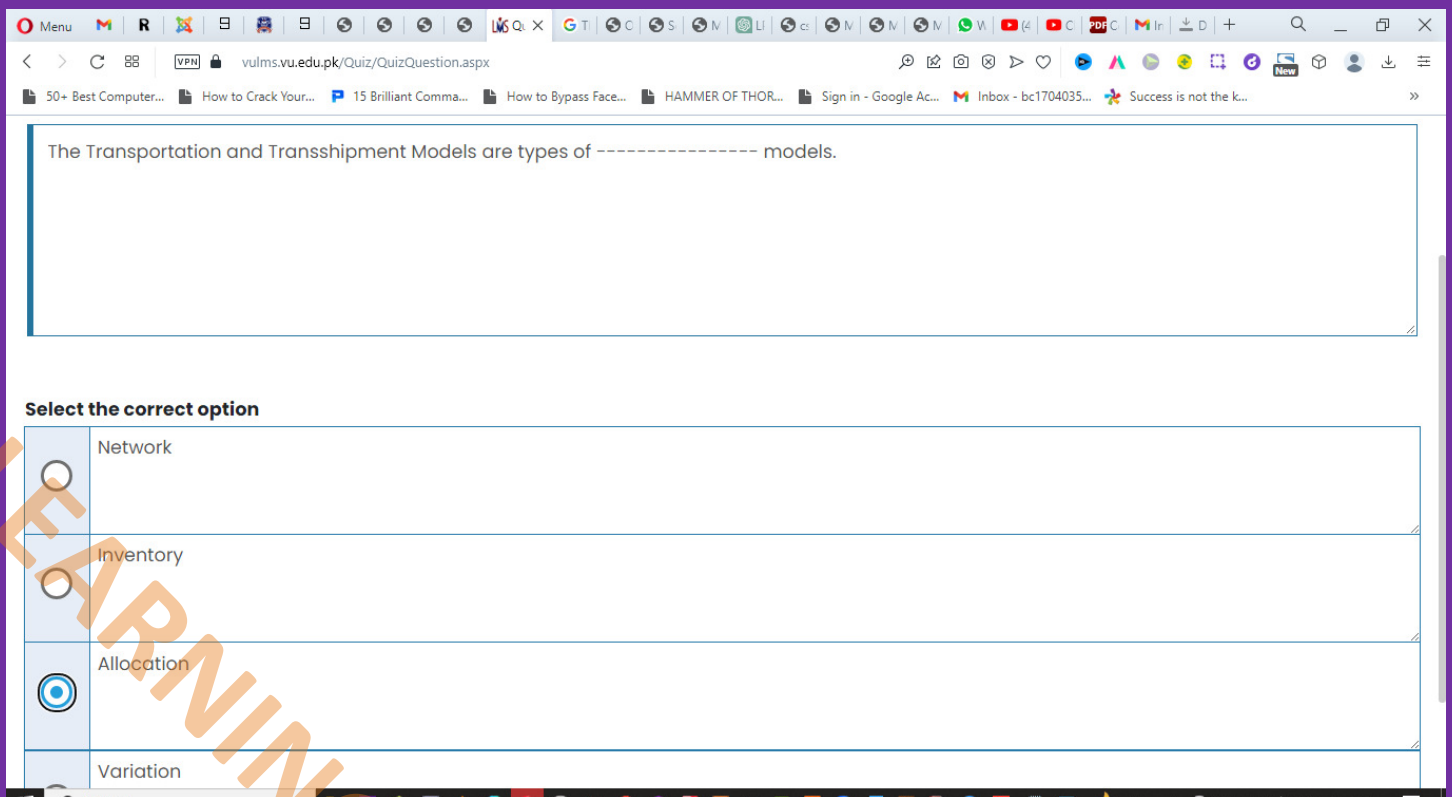

For an unbalanced Transportation problem, we have to open a dummy row or dummy column depending on the need, then the unit cost of transportation of cells of dummy row or column will be taken ----------.

Select the correct option

- arbitrary
- zero
- -1
- epsilon

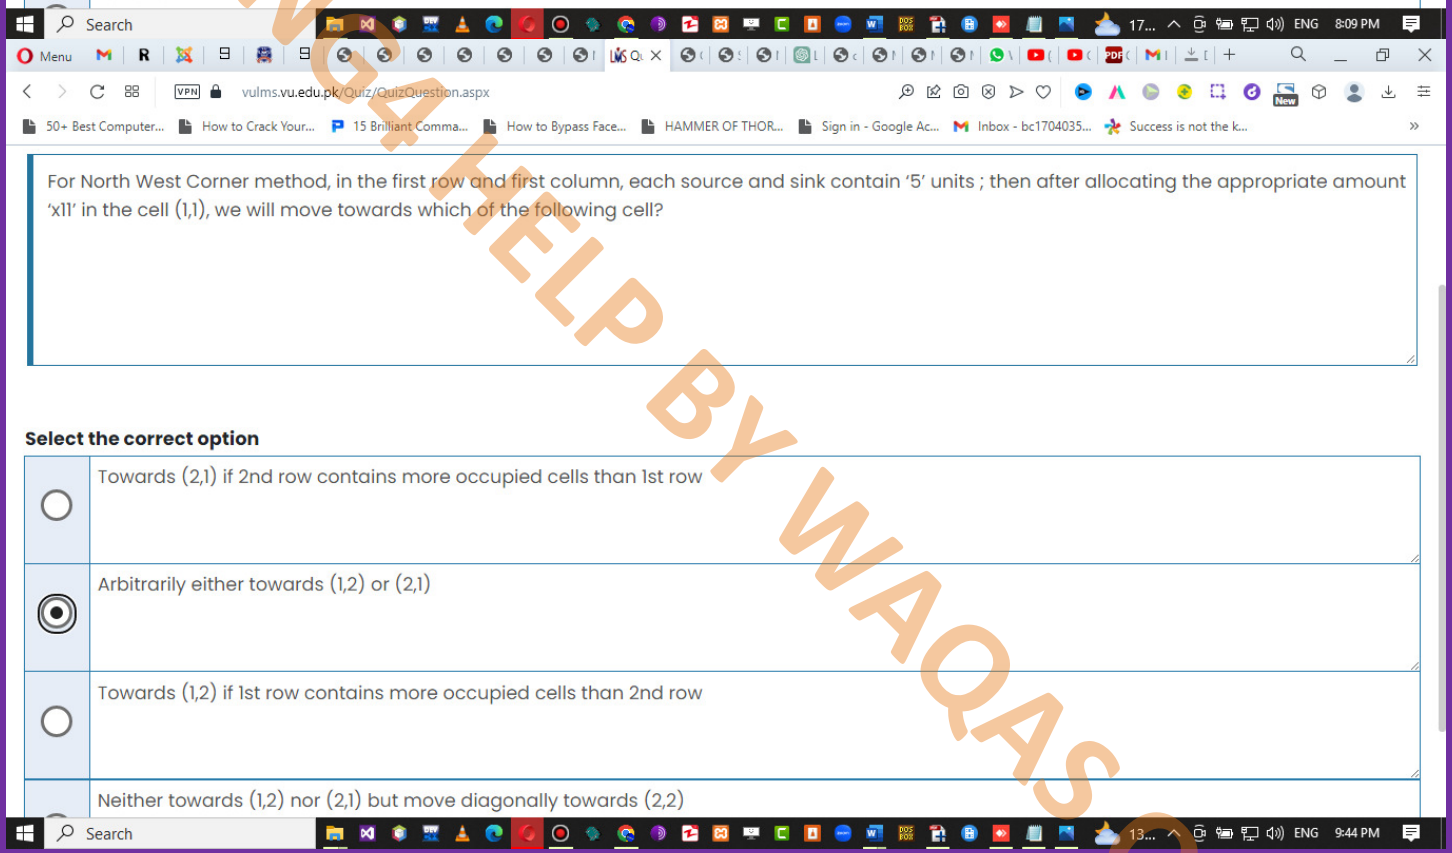

LEARNING & HELP BY WAQAS QURESHI

The Transportation and Transshipment Models are types of ---------- models.

Select the correct option

- Network
- Inventory
- Allocation
- Variation

For North West Corner method, in the first row and first column, each source and sink contain '5' units ; then after allocating the appropriate amount 'x11' in the cell (1,1), we will move towards which of the following cell?

Select the correct option

- Towards (2,1) if 2nd row contains more occupied cells than 1st row
- Arbitrarily either towards (1,2) or (2,1)
- Towards (1,2) if 1st row contains more occupied cells than 2nd row
- Neither towards (1,2) nor (2,1) but move diagonally towards (2,2)
