

Q1. Integrated curriculum design

An integrated curriculum is described as one that connects different areas of study by cutting across subject-matter lines and emphasizing unifying concepts. Integration focuses on making connections for students, allowing them to engage in relevant, meaningful activities that can be connected to real life. Understanding the benefits and how to effectively integrate curriculum can help teachers and students become more successful in the classroom.

Q2. Inductive thinking

Drawing generalizations from several items of specific data.

Q3. Deductive thinking

Involves applying one or more generalizations to specific cases.

Q4. Source Plan

It is preliminary flexible plans for teaching. It provides a collection of possible materials for teachers.

- Purpose of source plan

Provides a collection of possible materials for teachers

- Characteristics of Source Plan

1. Flexible – can be modified.
2. Inclusive – wide range of experiences.

A teacher can select material of her choice from the source unit as per the requirements of a particular group and use for teaching in her class.

Q5. Evaluation Procedure Steps

Evaluation Procedure Steps:

1. Defining objectives
 2. Identifying situations
 3. Selecting and developing instrument
- recording evidence
 - summarizing records of learning

Q6. Psychomotor Domain

It stresses muscular or motor skills which requires neuro-muscular coordination

- Levels of Psychomotor Domain

i. Reflex movements

- ii. Fundamental movements
- iii. Perceptual abilities
- iv. Physical abilities
- v. Skilled movements
- vi. Non-discursive communication

Q7. Alternatives of cultures

Certain cultural elements belong among neither the universals nor the specialties - these elements are exercised by the people by choice. The elements consist of ways of thinking & doing that depart from commonly accepted ideas or practices.

Q8. Focus of special Education

Concerned with the specialties of the culture. Specialties are ways of thinking & acting associated with: social class, vocational group or both.

Q9. What are instructional objectives?

Instructional objectives are clearly stated & describe observable & measurable student behaviors

Q10. What is the meaning of ‘learning experience’?

LEARNING EXPERIENCES ‘LE’ is the interaction b/w learner & external conditions in environment to which one (learner) can react.

Q11. What are the principles for selection of LE?

Principles for selection of LE

1. Opportunity to practice

For the attainment of a given objective, a student must be Given an opportunity to practice the kind of behavior implied by the objective.

2. Satisfying

LE must enable students to gain satisfaction while learning desired behavior, as per objectives

3. Desired reactions & range of possibility

“Teacher must begin where the student is”

LE should be appropriate to the student’s: present attainments & predispositions

Teacher’s role to have sufficient knowledge of students existing: attainments, background & mental sets

4. Multiplicity of LEs

Many LEs – to attain one objective

5. LE & multiplicity of outcomes

Same LE usually brings about several outcomes

Q12. What is community record?

- Child mortality,
- Frequency of occurrence of any disease with reference to health condition,
- Various types of social data by community etc.

Q13. Reconstructionism

Reconstructionism is about:

- Change & reform
- Rebuilding of social & cultural infrastructures

It argues that:

- Students must be taught to study social problems & think of ways to improve society
- Schools become the agent of social change & social reform.

- **Characteristics**

Its emphasis is on:

- Social sciences; history, political science, economics, sociology, religion, ethics, poetry, & philosophy, rather than pure sciences
- Social & economic issues as well as social service
- Making students to analyze interpret & evaluate social problems,
- Encouraging students to take action to bring about constructive change
- Engaging students in critical analysis of the local, national & international community issues; e.g., - poverty, - pollution, - unemployment, - crime, - war, - political oppression & - hunger.

The curriculum keeps on changing to meet the needs of changing society.

Q14. Difference b/w society and culture

Society is a group of organized individuals who think of themselves as a distinct Group. A society is composed of people.

A culture consists of the things the people have learned to: do, believe, value, Enjoy & so on in the course of their history.

(Society & culture are not identical)

Q15. What is an attitude? And how it is develop?

In psychology, an attitude is an expression of favor or disfavor toward a person, place, thing, or event.

A tendency to react even though the reaction does not actually takes place.

How attitude develop:

Q16. Domains of taxonomy

- i. Cognitive
- ii. Affective
- iii. Psychomotor

Q17. What is new definition of curriculum?

The term curriculum refers to the lessons and academic content taught in a school or in a specific course or program.

Q18. Write the names of basic notions?

Basic notions about evaluation are:

- Change in behaviour
- Frequency
- Modes
- Sampling

Q19. Cognitive Domain

It involves intellectual skills, ranging from remembering & reproducing materials to higher order thinking skills;

- reasoning • problem solving • evaluating ideas & materials.

Cognitive domain objectives can be accessed from simple to complex behaviors using six levels.

Levels of Cognitive Domain

- 1. Knowledge
- 2. Comprehension
- 3. Application
- 4. Analysis
- 5. Synthesis

Q20. Taylers model

Most Suitable Model for Curriculum Development. Tyler’s is the most do-able model.

- **Qualities of Tyler’s model**
 - 1. Global in nature
 - 2. Helpful to conceptualize
 - 3. It helps to view the big picture of curriculum at school level and grade level.

Tyler’s model as a planning tool helps teachers to identify the content of curriculum

Q21. Steps for Organizing Curriculum

1. General scheme of organization
2. General organizing principles to be followed within each of the fields decided on.
3. The kind of low level unit.
4. Developing flexible plans or source plans.
5. Student – teacher planning

Q22. Les – Organization

1. Meaning of organization

LEs & change in behaviour – time taking Changes in:

- ways of thinking
- fundamental habits
- operating concepts
- interests develop slowly.
- Educational objectives take marked concrete shape - months & years.
- Change - cumulating of educational experiences

Organized LEs that reinforce each other ‘Cumulative Effect’

Organization of LEs – important issue/ concern in curriculum development.

The organization of LEs affects the:

- teaching efficiency
- Degree to which changes are brought about among learners

Q23. Curriculum Theory

“Curriculum Theory is an act of clarifying meaning and use of language or act of theorizing and reflecting.”

There are two types of theories:

1. Perspective
2. Descriptive

Prescriptive Theory focuses upon:

- ☐ ☐ What is worthwhile to know?
- ☐ ☐ How do we know it is worthwhile?
- ☐ ☐ How it’s worth can be justified?

Descriptive Theory focuses upon:

How can ‘reality’ be modeled so that we know its salient features?

As a result we can:

- □ explain
- □ predict and
- □ control curricular activity &
- □ Behavior.

Q24. Joseph Schwab’s/ Practical Paradigm

Schwab’s consideration of curriculum planning is an interaction among various elements or common-places:

- Teachers,
- Learners,
- Subject, &
- Milieu.

Basic Characteristics:

- The elements continually influence one another.
- Classroom realities are of great significance so teachers must turn to:
- Inquiry & deliberation about the continuously changing dynamics of the common-places.

Q25. Define integrated curriculum?

An integrated curriculum is one, in which, “the lines separating subject matter areas from one another are erased ...and utilizes a conceptual or life-problem-oriented approach to organization”

Q26. Criteria for Effective Organization

- I. Continuity
- ii. Sequence
- iii. Integration

I. Continuity

Vertical reiteration of curricular elements

Q27. Name of basic notion?

Basic notions about evaluation are:

- Change in behaviour
- Frequency
 - Modes
- Sampling

Q28. Core curriculum and Integration

Core curriculum poses less difficulty in achieving integration with regard to the interposition of boundaries between subjects. Integration with daily life experiences of students. Issues faced in daily life like situations, where students are to apply what they have learnt in the school, tend to cut across narrow subject lines. Broad groupings for organization like broad fields or core programs should be used instead of narrow units like subjects and course.

Q29. Define Curriculum design?

A frame work of action for preparing a curriculum is called Curriculum design

Q30. Define thinking?

Thinking’ various meanings generally, the kind of behaviour implied is: Relating two or more ideas rather than remembering & repeating these ideas

Q31 Types of Curriculum

Major types of curriculum are:

- Explicit/Overt/Written
- Implicit/Covert/Hidden
- Null
- Co-curricular/Extra- curricular

Q32. How teachers develop Diversity among Students?

Each student in the class has different experience, even though external environment is the same- it puts a big responsibility upon the teacher:

- To set up a situation which has many features
 - The facet are likely to evoke desired experience from all students or
- The teacher will have to vary experience so that they are likely to be significant to each of the student in the class.
- The problem of selecting LE is the:

Q33. Achieving Integration

- Achieving integration is difficult if organizing structure is in specific pieces.
- It requires arrangements of elements of each piece into unified form.
- To develop relationships among and between all pieces in the organizing structure becomes difficult because of large number of piece3s involved.

Example: In elementary school, organization with 8 or 9 subjects is difficult to achieve integration.

Organization with 4 or 5 broad fields,

- Language arts
- Social studies
- Health and hygiene
- Physical education

Q34. Why do we appraise more than one time?

To see whether change has taken place, therefore,

- Appraise at entry point
- Appraisals at later points

Without knowing where students were in the beginning:

- It is impossible to tell what changes have taken place among students after the program.

Q35. Evaluation & paper-pencil test

Evaluation as synonymous with paper pencil test. It provides:

- A practicable procedure to gather evidence about several kinds of student behaviors.

Examples:

Paper pencil test assess students’ prior knowledge.

- Writing
- Reading

- Multiple responses etc.

Students’ ability to deal with:

- Verbal problems
- Vocabulary
- Reading

Q36. Ways of Record Keeping

It may involve:

- making a detailed description of reaction by an observer, it may suggest the use of motion pictures, sound recording, check list etc. as a mean of getting a satisfactory record. This step must be considered in connection with each test situation to be sure that the situation not only evokes desired behaviour but a record can be obtained and that can be appraised later.

Summarizing record of learning

In developing instrument next step is to decide upon terms or units to be used to summarize or appraise the record of behaviors obtained. This method of appraising behaviour should parallel the implications of behaviour itself.

Q37. Teachers Involvement in Curriculum Development

Teachers’ involvement

Teachers become extensively involved in curriculum development as they write down precise instructional objectives for their classrooms based on general goals.

Q38. What are instructional objectives?

Instructional objectives are clearly stated & describe observable & measurable student behaviors

What is included in Instructional Objectives?

- Behaviors: observable or measureable
- Condition under which behaviors will occur
 - on an exam
 - in a classroom
- A minimum / acceptable level of performance

Expertise required among teachers to translate goals into instructional objectives

The knowledge about:

- goals
- subject matter &
- student

Q39. Importance of continuous evaluation.

Continuous Evaluation

To identify areas of improvement for:

- A group of students
- Individual students
- Planning programs for individual help of students in the view of their progress in educational program

Evaluation and Success of School

Provides information about school success to parents

School needs to be appraised in terms of their effectiveness in attaining objectives. The evaluation results need to be communicated to parents according to their levels of understanding or translated to be in terms that will be understandable to parents and public generally.

In short an evaluation procedure must determine:

- What changes are taking place among students
- Were we are achieving our curricular objectives.

Q40. Aspect of concept of evaluation

This concept of evaluation has two aspects:

- Evaluation must appraise behaviour of students
- Involve more than a single appraisal at any one time.

Q51. Organization advantages and disadvantages

Advantages and Disadvantages of Organizing Structures

Achieving continuity and integration through discrete subjects, courses for:

- Semester
- Year

Discrete lessons – all these create problems and vertical organization is impossible to attain. Vertical organization demands courses to be organized over a period of years in larger units and a larger framework.

7. developing evaluation instruments (192)

For a particular objective, an instrument can be devised in two possible ways:

1. Try out some of the situations suggested as situations that give students opportunity to express the behaviour desired.
2. This try out provides an opportunity to see whether these situations will serve as convenient ways of gathering evidence.

Example: ability to analyse problems Situation 1:

- A number of problems are presented in written form and - Students are asked to analyse them.

This situation can be tried out with students to find out how far responses obtained give an adequate basis for checking student ability to solve problems.

Situation 2:

To find out student interest:

- Questionnaire with a variety of activities
- Students were asked to check activities they are:
 - Interested
 - Not interested

If this situation gives an opportunity to students to show their interests. It should be based on trial basis to see how satisfactorily it works.

This is a useful step in developing possible evaluation tools into forms and can be satisfactorily used.

8. large school steps curriculum development (203)

Step 1:

Special Committees for the activities like:

- Studies of learners
- Contemporary life issues
- Subject specialists reports

Drafting committees

These committees prepare initial drafts of:

- Philosophy of education
- Psychology of learning

Committee of the whole (school staff) studies, discusses and revises the drafts of philosophy of education and psychology of learning

Step 4:

Committees formulate objectives and organize framework for curriculum (first draft)

Committee of the whole staff discusses and finalizes the draft of objectives and organizational framework.

Step 6:

Planning groups of teachers – learning experiences

- A subject area
- Same subject at different grade levels and
- Related subjects any work together for planning of LEs.

Step 7:

Special Review Committee

It reviews and coordinates the detailed instructional plan.

9. important facts about subject specialist

Important Facts about SS

- Most commonly used source of objectives
- text books writers
- share their reflections actively & openly
- plan course of studies for schools
- Propose objectives that schools should attain. SS – a source of objectives-

Criticism Objectives propose are:

- too technical
- too specialized
- inappropriate for large number of students

10. what is humanistic curriculum (33

Humanism/Humanistic Theory

According to humanism learning is a personal act to fulfill one’s potential. It focuses on human dignity, freedom and potential. And fulfills cognitive affective needs (key to development).

Humanism develops self-actualized people in a cooperative supportive environment. Humanistic curriculum:

- learner centered
- Needs teacher to be a facilitator.

Problem solving Design

Problem Solving Design

Organized around activities & projects for: o individuals
o groups of students to engage them to seek solutions to various problems

These situations provide a context for:

- thinking about & identifying the problem
- posing options
- making decisions
- developing action plans for carrying out agreed upon strategies Thematic/

Integrated Design Organized around a:

- topic &
- theme

Involves the:

- content &
- skills from various subjects

An integrated curriculum is one, in which, “the *lines separating subject matter areas from one another are erased ...and utilizes a conceptual or life-problem-oriented approach to organization*”

1-What is new definition of curriculum?

The term **curriculum** refers to the lessons and academic content taught in a school or in a specific course or program. In dictionaries, **curriculum** is often **defined** as the courses offered by a school, but it is rarely used in such a general sense in schools

2-What is including in instructional objectives?

- behaviors - o observable o measureable
- condition under which behaviors will occur - o on an exam o in a classroom
- a minimum / acceptable level of performance (%age of correctness)

Expertise required among teachers to translate goals into instructional objectives
The knowledge about:

- goals
- subject matter & students 2

3-What are aspects of concept of evaluation?

The last step of the Evaluation Process Model is refined into three steps, namely measurement, rating and assessment.'

- Measurement: 'For measurement, the selected metrics are applied to the software product.

The result is values on the scales of the metrics.'

- Rating: 'In the rating step, the rating level is determined for a measured value [...]' • Assessment: 'Assessment is the final step of the software evaluation process where a set of rated levels are summarized. The result is a statement of the quality of

the software product. Then the summarized quality is compared with the other aspects such as time and cost. Finally managerial decisions will be made based on the managerial criteria. The result is a managerial decision on the acceptance or rejection, or on the release or no-release of the software product.

2

4-What is Low level of organizing the curriculum?

Topic 172: Step – 3 Low Level Units

The kind of low level unit to be used in the class, whether,

- Daily lesson
- Topics in sequence or Teaching units
- a. The lesson – a single day is treated as a discrete unit. It is historically the most widely used structure.
- b. A topic – may last for several days or weeks.
- c. The unit – organized around problems or major student purposes. Usually spreads over several weeks.

Advantages and Disadvantages of Organizing Structures

Achieving continuity and integration through discrete subjects, courses for:

- Semester
- Year

Discrete lessons – all these create problems and vertical organization is impossible to attain. Vertical organization demands courses to be organized over a period of years in larger units and a larger framework.

2

5-What is philosophy of reconstructionism? Reconstructionism

Reconstructionism is about:

- change & reform
- rebuilding of social & cultural infrastructures It argues that:
- students must be taught to study social problems & think of ways to improve society
- schools become the agent of social change & social reform.

Topic 31: Characteristics of Reconstructivist Curriculum

Its emphasis is on:

- social sciences; history, political science, economics, sociology, religion, ethics, poetry, & philosophy, rather than pure sciences
- social & economic issues as well as social service
- making students to analyze, interpret & evaluate social problems,
- encouraging students to take action to bring about constructive change
- engaging students in critical analysis of the local, national & international community issues; e.g.,
 - poverty,
 - pollution,
 - unemployment,
 - crime,
 - war,
 - political oppression &
 - hunger.

The curriculum keeps on changing to meet the needs of changing society.

3

7-Learner centered curriculum?

Student / Learner Centered Focuses upon the:

- developmental level
- needs & interests of the students Knowledge of child

- growth &
- development plays an important role in CD
According to Morrison (1993), “whatever happens to children in school is dependent on:
- what they are taught
- how they are taught &
Activities they participate in, should be.....appropriate to their:
- physical,
- emotional,
- social &
- cognitive level of development.

Broad Fields Design

Focuses upon related disciplines & treated as one field of study, “social studies”, e.g.,

- history,
 - economics
 - sociology
 - geography &
 - anthropology
 - *“It is an attempt to*
 - *Integrate content that*
 - *appears to fit together*
 - *logically”*
- Example

- Elementary level
- Social studies is one of the examples

8-Steps of evolution procedures?

- i. Defining objectives
- ii. Identifying situations
- iii. Selecting and developing instruments

9-Planning the organizing the LE in curriculum?

Planning the organization of learning experiences in curriculum It involves:

- A great deal of pre planning -

Planning as work goes on

It is through preplanning and planning that the greatest cumulative effect from various learning experiences is achieved. We have explored:

1. The meaning of organization
2. The criteria for organization
3. Organization of elements
4. Organizing principles
5. The process of planning unit of organization

11-Operationalized the curriculum development?

Topic 220: Operationalizing the Curriculum Development Process

Operationalizing CD Process – focusing upon classroom teaching/instruction

Successful completion of steps:

- development of instructional objectives
- selection of a curriculum design

STEP- I Planning for teaching & learning a.
Determining prior

- knowledge & skills
- b. Establishing
 - learning outcomes
- c. Reviewing appropriate

- resources & materials
- Planning the curriculum Planning means:

- Reviewing sources of curriculum as suggested by Tyler
- rehearsal for what will take place in Step- 2, that is, “teaching” Planning as a process means:
 - organizing content
 - identifying & sequencing learning tasks
 - selecting assignments
 - defining classroom management
 - assessment procedures

Topic 221: Operationalizing the Curriculum Development Process II

Step- 2 Implementing the Plan

Curriculum plans are implemented either as parts of a unit or as daily lessons.

Implementing the plan

1. Teaching lessons
 2. Using teaching strategies & activities
 3. Modeling & providing input
 4. Monitoring student progress Important facts
- Often time curriculum & teaching are used interchangeably,
 - For many educationists, “curriculum” is all about , “outcomes”, and “teaching” is the means to attain these “outcomes”
 - There is a relationship between curriculum & teaching. “curriculum” is not just ‘ends’, isolated form “teaching” or ‘means’; together they create a whole that is greater than the sum of their parts.
 - Curriculum” & “teaching” are interdependent, not mutually exclusive.

Topic 222: Operationalizing the Curriculum Development Process III

Step- 3 assessing teaching & learning

1. Conducting
 - formative &
 - summative assessment
2. Analyzing student performance data
3. Determining the level of achievement Assessment is done to know:
 - what students know about
 - content &
 - level of their skills in various tasks
 - If students show low performance, the CD process requires:
 - modification of the plan & re-teaching of concepts with different strategies.

Process of CD Particular:

- school
- grade level

- class involves all basic principles we have explored in the course.

5

12-Note on subject centered curriculum development?

Curriculum Designs

Organization of learning objectives for teaching & learning = curriculum designs

- Subject centered /discipline based
 - Student /learner centered Curriculum Designs
 - Broad fields
 - Problem solving
 - Integrated / thematic
- Subject Centered/ Discipline Based Curriculum Design Focuses upon:

- a separate subject orientation,
- No integration of information or shared skills with other curriculum areas

This design reflects Bruner’s (1960) view,

“Subjects form the basis for what is taught in school & are made up of:

- concepts
- generalizations & facts

13-What a type of assessment through paper pencil test?

1. Evaluation & paper-pencil test

Evaluation as synonymous with paper pencil test. It provides:

- A practicable procedure to gather evidence about several kinds of student behaviours.

Examples:

Paper pencil test assess students’ prior knowledge.

- Writing
- Reading
- Multiple response etc.

Students’ ability to deal with:

- Verbal problems
- Vocabulary
- Reading

Other ways of getting evidence

i. Observations of children under conditions in which:

- Personal-social adjustments
- Habits and
- Operations skills are included.

ii. Interviews

Changes in:

- Attitudes
 - Interests
 - Appreciations
- iii. Questionnaires

Evidence about

- Interests
- Attitudes and
- Other types of behaviours

iv. Student work

- Themes written by students'
- Painting – skill and area of interest
- Models – Creativity

v. Other evidences

- Library books – with drawn
- Health records

Conclusion

Any way of getting to evidence about the kind of behaviours desired by objectives of any educational program – is an appropriate evaluation procedure

14-Steps of organization curriculum?

1. General scheme of organization
2. General organizing principles to be followed within each of the fields decided on.
3. The kind of low level unit.
4. Developing flexible plans or source plans.
5. Student – teacher planning.

15-How LE helpful developing interest?

Interests – as

- end (objectives)
- means (motivational force with regard to experiences to attain the objectives) Let's consider Interests – as objectives, because
- What one is interested in largely determines, what one attends to
- & is interested in

2. LEs to helpful in acquiring information

Information

Principles

Laws

Theories

Experiments Evidences
Supporting:

➤ Generalizations of acts

Ideas 5

Q1. What is the level for analyzing CL? 2marks Q2.

What is an attitude?

A tendency to react even though the reaction does not actually takes place

A predisposition or a tendency to respond positively or negatively towards a certain idea, object, person, or situation. Attitude influences an individual's choice of action, and responses to challenges, incentives, and rewards (together called stimuli).

Four major components of attitude are (1) Affective: emotions or feelings. (2) Cognitive: belief or opinions held consciously. (3) Conative: inclination for action. (4) Evaluative: positive or

negative response to stimuli.

What is community record?

- Child mortality,
- frequency of occurrence of any disease with reference to health condition,
- various types of social data by community etc

.Define Gestalt theory?

Gestalt / Cognitive Theory

- How students learn
It takes into account students':
- attitudes
- prior experiences
- values &
- interests

It proceeds from whole to parts.

In the theory,

“learning consists of the formation of new perceptions when the learner is confronted with problem situation”

Learning is a process of developing new insights & is influenced by what everyone brings to a learning situation.

Classroom applications of Cognitive theory

- problem solving situations are emphasized
- mistakes are seen as opportunities to learn
- integrated thematic planning is encouraged
- Self-concept activities
- teacher questions focus - higher order cognitive skills (*application, analysis, synthesis & evaluation*)

Conceptual models & mind maps help students build mental constructs of concepts

After studying:

- goals of education
- sources of curriculum and
- two screens teachers identify specific instructional objectives.

Write down steps of Evaluation process?

Evaluation Procedure Steps:

- i. Defining objectives
- ii. Identifying situations
- iii. Selecting and developing instruments

What is the demand of school program of curriculum reconstruction? It

demands:

- extensive faculty participation.
- Each teacher to clearly understand objectives of the instructional program.
- Teachers to clearly understand LEs to attain these objectives.
- Teachers to be able to guide the activities of students to enable them to get these experiences.

Fulfilling these demands will ensure that educational program will become an effective instrument for promoting the aims of the school.

How does learning take place?

- Learning takes place through the active behavior of the learner **LEARNING EXPERIENCES**

It is, 'what he does that he learns, not what the teacher does.'

Example:

Two students to be in the same class to have two different types of experiences;

- interested & attentive student
- un-interested & un- attentive

LE- involves interaction of:

Student & his environment – implies that student is an active participant; some features of environment attract his attention, & it is to these (features) he reacts.

What are criteria against we check our LEs?

- criteria derived from educational psychology, practical experiences.
- objectives that are set up.
- against important psychological principles.

It seems that some kind of preliminary evaluation of LEs has already been done. It can be referred to as preliminary stage of evaluation.

Write brief note on “psychomotor” domain?

It stresses muscular or motor skills which requires neuro-muscular coordination

Levels of Psychomotor Domain

1. Reflex movements
2. Fundamental movements
3. Perceptual abilities
4. Physical abilities
5. Skilled movements
6. Non-discursive communication

A Framework for Examining the Instructional Objectives

The domains & levels within each domain provides a framework for assessing the instructional objectives. A suggestion for teaches is that every lesson should have objectives in each of:

- three domains &
- different levels within each domain

Why do we seek suggestion from subject specialist?

Who is a subject specialist (SS)?

Why seek suggestions from SS?

How to get hold of suggestions from SS?

Important Facts about SS

- Most commonly used source of objectives
- text books writers
- share their reflections actively & openly
- plan course of studies for schools
- propose objectives that schools should attain.

SS – a source of objectives-Criticism

Objectives propose are:

- too technical
- too specialized
- inappropriate for large number of students

Q15 how do attitude develop?

1. Assimilation from environment
2. Emotional effects of certain kinds of experiences
3. Traumatic experiences
4. Direct intellectual process

What is def of integrated curriculum?

An integrated curriculum is one, in which, “the lines separating subject matter areas from one another are erased ...and utilizes a conceptual or life-problem-oriented approach to organization”

Write the names of basic notions?

Basic notions about evaluation are:

- Change in behaviour
- Frequency
- Modes
- Sampling

4. 3 domains of taxonomy of objective

Taxonomy of objectives

Step - I

Instructional objectives

Step – II

Classification of objectives

- specific level
- domains of learning

Taxonomy of objectives – functions

- Categorization of objectives or
- Evaluation of objectives – learning outcomes Learning outcomes – classification Three domains:

(objectives are written)

1. Cognitive
2. Affective
3. Psychomotor

Cognitive Domain

It involves intellectual skills, ranging from remembering & reproducing materials to higher order thinking skills;

- reasoning
- problem solving
- evaluating ideas & materials

Cognitive domain objectives can be assessed from simple to complex behaviors using six levels.

Levels of Cognitive Domain

1. Knowledge
2. Comprehension
3. Application
4. Analysis
5. Synthesis
6. Evaluation

Topic 215: Taxonomy of Objectives cont

Affective Domain

It stresses upon:

- Values
- Feelings
- Attitudes

Relevant behaviors range from paying attention to personal actions.

Hierarchies of Affective Domain

1. Receiving
2. Responding
3. Valuing
4. Organizing
5. Being characterized by a value

Psychomotor Domain

It stresses muscular or motor skills which requires neuro-muscular coordination

Levels of Psychomotor Domain

7. Reflex movements
8. Fundamental movements
9. Perceptual abilities
10. Physical abilities
11. Skilled movements
12. Non-discursive communication

A Framework for Examining the Instructional Objectives

The domains & levels within each domain provides a framework for assessing the instructional objectives. A suggestion for teaches is that every lesson should have objectives in each of:

- three domains &
- different levels within each domain

Taylers model

Most Suitable Model for Curriculum Development Tyler’s is the most do-able model.

Qualities of Tyler’s model

- Global in nature
- Helpful to conceptualize
- It helps to view the big picture of curriculum at school level and grade level.

What is the goal of education?

Tyler’s model as a planning tool helps teachers to identify the content of curriculum.

What does the process of curriculum development do?

It enables teachers to formulate student behaviours and to develop appropriate and reflective experiences for students.

How teachers learning are important in planning curriculum?

Teacher/s teaching:

- A subject area
 - Same subject at different grade levels and
- Related subjects can work together for planning the LEs

related to vocational

Vocational education and training (VET) **DEFINITION:**Education and training which aims to equip people with knowledge, know-how, skills and/or competences required in particular occupations or more broadly on the labour market.

Core curriculum and integration?

Core curriculum poses less difficulty in achieving integration with regard to the interposition of boundaries between subjects.
Integration with daily life experiences of students
Issues faced in daily life like situations, where students are to apply what they have learnt in the school, tend to cut across narrow subject lines.
Suggestions
Broad groupings for organization like broad fields or core programs should be used instead of narrow units like subjects and course.

Criteria for effective organization Criteria for organization i. Continuity ii. Sequence iii. Integration

I. Continuity

Vertical reiteration of curricular elements

Example

Objective 1:

To develop reading skills in social studies material How would it appear in Curriculum?

It will:

- reflect recurring opportunity for the skills to be:
- Developed &
- Practiced

Example:

Objective 2:

To develop meaningful concept of ‘energy’

Curriculum

Concept dealt with again & again in various parts of the course. Continuity – A major factor in effective vertical organization.

Topic 155: ii. SEQUENCE LEs – ORGANIZATION

Continuity & Sequence

- What if there is repetition but at the same level – useless as there is no new development of:
- concept
- skills
- attitude

ii. Sequence

Demands every new experience:

- build upon the previous one
 - To go more deeply & broadly into the concepts involved
- Sequence – goes one step ahead of continuity

Example

Objective 1:

To develop reading skill in social studies (SS) material.

What would sequence require? Sequence – would require:

- More complex SS material • Increasing:
- Breadth in the operation of skill involved in reading
- Depth of analysis so that it is not repetition of what was read in the previous grade.

Example

Objective 2:

To develop meaningful concept of 'energy' What would sequence require?

Sequential development of the concept would require:

- Greater depth & breadth
- Broader & deeper implications.

Sequence - requires

- Higher level of treatment with each successive LE &
- rejects repetition

Topic 156: iii. INTEGRATION

Integration –

Horizontal relationship of curricular or LEs. It requires LEs enable students to:

- gain increasingly a unified view &
- unify behavior in relation to the elements dealt with

Example:

Objective:

To develop skill in handling quantitative problems in arithmetic Ways to develop these skills can be utilized effectively in:

- social studies
- science
- shop/everyday life

It ensures skill is not developed as:

- isolated behavior that can be used in one course only BUT
- part of total capabilities of students to be used in various situations in daily life.

Example

Concept

Development in Social Studies, it is important to see:

- how it is linked to learning in other subject areas

It is easy to ensure that there is:

- Continuity
- Sequence
- Integration in curriculum, for effective curriculum organization?

2 advantages of two dimensional charts.

Objectives- Two dimensional chart is useful:

- to select the learning experience
- achieve intended behaviors
- learn content/concepts

Principles of selecting LE

Principles for selection of LE

1. Opportunity to practice
2. Satisfying
3. Desired reactions & range of possibility
4. Multiplicity of LEs
5. LE & multiplicity of outcomes

Types of organization

There are two types of organizations:

- Logical and
- Psychological

The distinction between the organizations:

Logical is viewed by the experts in education.

Psychological organization – relationship as it may appear to learners. In many instances logical and psychological organizations are the same.

Example:

A relationship which has a meaning and significance to an expert, is also an appropriate psychological organization, that is, it can be a scheme of development in relations meaningful to learners themselves.

In other instances, sharp differentiation can be made between the connections seen by the experts and developments which are meaningful to learners. Chronological organizations

- History
- Geography
- Science
- Literature
- Art

Neither it broadens nor deepens learners command on the elements involved.

What is the process of planning a unit of organization?

We know the issues faced in organizing LEs and principles to address these problems effectively. Now we will look into the planning methods used in developing organized curriculum programs. Several ways are used to develop organization in curriculum.

Steps for Organizing Curriculum

1. General scheme of organization
2. General organizing principles to be followed within each of the fields decided on.
3. The kind of low level unit.
4. Developing flexible plans or source plans.
5. Student – teacher planning.

This general operational procedure is used by various curriculum developers.

Step 1- General Scheme of Organization

Agreeing upon the general scheme of organization, whether specific subjects, broad fields and core curriculum will be used

how do alternative enter into a culture?

- by invention in the society
- diffusion from other cultures Cultures may be:
- static/ un-changing
- dynamic/ changing

New ways of doing things emerge, come to be accepted & absorbed by either the universals or the alternatives.

What is the definition of integrative need?

Need to relate one's self to something larger and beyond one's self.

Need for a philosophy of life

What is definition of implicit curriculum?

Implicit curriculum includes "values"& "norms" that are set by society & its culture lessons that arise from culture of school and behaviors, attitudes, & expectations that characterize that culture. It has more to do with the "where" of education than the "what".

It includes:

- informal &
- unintentional teaching of:
 - behaviors
 - attitudes &
 - perspectives students pick up while they are at school. They learn to:
 - form opinions and ideas about their environment & classmates
 - act in 'appropriate' ways at school
 - behave as is expected of them in the class or play ground It also addresses student ideas about:
 - gender,
 - morals,
 - social class, ➤ stereotypes,
 - cultural expectations, ➤ politics & ➤ language.

The attitudes & ideas are not taught formally, but students absorb & internalize them by observing & participating in activities in- & outside the classroom

What is the focus of humanism theory?

According to humanism learning is a personal act to fulfill one's potential. It focuses on human dignity, freedom and potential. And fulfills cognitive affective needs (key to development).

Humanism -

- develops self-actualized people in a cooperative supportive environment.

Humanistic curriculum:

- learner centered needs teacher to be a facilitator

What are the characteristics of common education curriculum?

In every culture it will be/ is based on the:

- universal elements of the culture
- aspects of the specialties that are of general concern.

How can we infer objectives from investigation?

How to infer objectives from investigations?

What is data?

- Information collected in an investigation
- Information collected by using different types of sources or instruments/ tools What can be the form of Data?
- Short/Tabulated/ List - Statements

How to infer Objectives from investigations?

- Studying the data for implication o comparing data with standards o obtaining suggestions about possible needs, a school can meet.

The important of implication of data

-cannot be over emphasized as data can be interpreted in different ways

Example:

“60% boys in 6th grade of an elementary school read nothing outside of school other than lesson given from the textbook” can be interpreted in two ways.

1. One group of teachers might suggest that the school needs to teach the boys how to read more rapidly or with greater satisfaction.
2. Another group of teachers, would suggest the problems of the reading interests of these boys & need for setting up the objectives to broaden reading interests.

What is cultural core?

Cultural Core consists of central body of elements, i.e., Universals & Specialties.

It refers to:

- Fundamental rules
 - Knowledge &
 - Skills, by which people: o live
- o carry on their conduct o rationalize their conduct & upon which they build their hopes & expectations. From these elements society draws it:

- stability & • vitality

They underlie all social institutions & constitute the bases of moral & social judgment.

Cultural core & people shapes general pattern & spirit of a culture that determines people's political & economical habits. The economical habits include:

- kind of institutions
- extent of competition or collaboration with each other
- way of controlling those who deviate from accepted patterns of conduct.

Briefly described the methods of observation as social investigation?

- Methods of social investigations
1. Observation by the teacher
 2. Student interview
 3. Parent interview
 4. Questionnaire
 5. Interest questionnaire

What methods can be used in studying the learners?

- Methods of social investigations
6. Test
 7. Examination of community records
 8. Participation of teachers
 9. Participation of students

What is a source plan?

- Preliminary flexible plans for teaching What is the purpose of source plan?
- Provides a collection of possible materials for teachers

Characteristics of Source Plan

1. Flexible – can be modified.
 2. Inclusive – wide range of experiences.
 1. Source plans are flexible and can be modified easily according to the needs, interests and abilities of any particular group.
 2. Source plans are inclusive enough, that they provide a wide range of experiences out of which, the most appropriate for any group may be selected.
- A teacher can select material of her choice from the source unit as per the requirements of a particular group and use for teaching in her class.

Importance of sources in curriculum?

- Society’s values
 - Students’ needs
 - Input from subject specialists
- These sources provide data and help to determine the educational purposes school should pursue. Additionally, sources suggest looking at broader context that impacts curriculum and offers answer to questions like;
1. What educational goals the schools should hope to achieve through curriculum?
 2. What knowledge and skills are needed to prepare students for jobs today and in future?
 3. How can a school provide a curriculum for students, having different learning styles, abilities, skills and interests?
 4. Is the subject hierarchical, sequential or spiral in nature?
 5. How can knowledge and skills across subject areas be integrated?
 6. How can a thematic approach help students to see the inter-relatedness of knowledge? First step towards curriculum development is answering these questions, which help to:
 - Define the scope of curriculum
 - Determine general goals of education

These general goals are stated in all curricula (national and school). These goals help to determine:

 - What should be taught in school?
 - How it should be taught?
 - How it should be assessed?

What is industrial revolution?

Prior to Industrial

Revolution –

- limited body of knowledge
- easy to make a selection from cultural heritage

Industrial evolution

- increased body of knowledge
- schools were expected to teach all the knowledge
- school faced to difficulties to fulfill this demand

Since, it was impossible to include all scholarly knowledge in educational program, therefore, the question about the contemporary significance of particular knowledge, skills & abilities, was raised

Hypothesis?

a supposition or proposed explanation made on the basis of limited evidence as a starting point for further investigation.

Theory of behaviorism?

Behaviorism (S-R) Theory

People learn through conditioning process, correct responses are reinforced. Reinforcement strengthens the bond between stimulus and response.

Classroom Situation

It is followed, however it is confined to the lower levels of cognitive domain of Bloom’s Taxonomy; that is recall and comprehension.

Classroom Applications of the S-R theory It includes the use of:

- Assertive Discipline (rewarding appropriate behavior with treats)
 - Behavior Modification Techniques
- (reinforcing appropriate behaviors with praise)
- Questioning Technique (recall questions - actual or informational with a high degree of success)
 - Computer Assisted Instruction (computers to provide questions,

9. Define thinking?

the process of considering or reasoning about something using thought or rational judgement; intelligent

10. What is the importance of teacher student planning?

1. Teacher student planning for particular things enables students to:
 - Develop greater understanding
 - Give meaning to learning - Be motivated for learning
 - In teacher student planning activities must be selected from the ones given in the units. Additions may be made as per students see possibilities.
 - A particular plan followed by each group of students will show some variations from the original source unit.
 - A particular plan will never include all materials given in the source unit itself.

What are two dimensional analyses of objectives?

Two dimensional analysis-importances Serves as a basis for planning of:

- Learning experiences
- Evaluation procedures

So, two dimensional analyses of objectives serve-as a set of specification for evaluation Analysis of objectives and evaluation To develop:

- Behaviours
- Knowledge skills

Two dimensional analysis-importances

Serves as a basis for planning of:

- Learning experiences
- Evaluation procedures

So, two dimensional analyses of objectives serve-as a set of specification for evaluation Analysis of objectives and evaluation To develop:

- Behaviours
- Knowledge skills

Steps for designing curriculum for large organization?

Structural Elements exist at three levels of organization:

1. Largest
 2. Intermediate
 3. Lowest
- Largest level of organizing structure’

- a. Subject specific
 - b. Broad field
 - c. Core curriculum combined with broad fields or specific subjects
 - d. Undifferentiated structure Subject specific For example:
 - Arithmetic
 - Geography
 - History
 - Spellings
- Broad fields

- Social studies
- Language arts
- Mathematics
- Natural sciences

Core curriculum for general education is combined with broad fields and specific subjects.

Completely undifferentiated structure – program is treated as unit.

For example: curricula of less formal educational institutions, like boy scouts and girl guides
