

PSY502 - Lesson 41+42

PSYCHOLOGY IN THE THIRD WORLD

◆ What does “Third World” mean in psychology?

Third World countries are those nations that:

- Gained **independence after World War II**
- Were previously **colonies** of European or American powers

Examples:

- **Pakistan, India**
- Most of **Africa**
- **Vietnam, Indonesia**
- **China** (the largest)

Important clarification:

“Third World” does **NOT** mean poor or inferior.

It is a **historical and political term**, referring to **colonial history**, not intelligence or potential.

Why does psychology matter here?

Psychologists began asking an important question after World War II:

❓ Does being colonized change the way people think, feel, and see themselves?

This question gave rise to **Third World Psychology** and **Post-Colonial Psychology**.

FRANTZ FANON (1925–1961)

Who was Fanon?

- A **psychiatrist** (doctor of mental illness)
- A **psychologist**
- A **revolutionary thinker**
- A **post-colonial theorist**

Background:

- Born in **Martinique** (a French colony)
- Educated in **France**
- Worked as a **psychiatrist in Algeria** (a French colony in **North Africa**, not South America – *note: the text has a geographical error*)

Fanon's Famous Books

1 ***Black Skin, White Masks* (1952)**

- Focus: **Psychological effects of racism**
- Subtitle: *"An Essay for the Disalienation of Blacks"*

Disalienation

Removing feelings of **inferiority and self-hatred** caused by oppression

2 ***The Wretched of the Earth* (1961)**

- Focus: **Psychology of colonization and revolution**
- Explains how **colonial rule damages mental health**

Fanon's Core Psychological Idea

Colonization creates TWO TYPES OF PEOPLE

1 The Colonizer

- The **oppressor**
- Sees himself as:
 - Superior
 - Civilized
 - Intelligent
- Imposes:
 - His language
 - His culture
 - His values

2 The Colonized

- The **oppressed**
- Becomes:
 - Meek (quiet, submissive)
 - Obedient
 - Psychologically dependent
- Starts believing:
 - "We are backward"
 - "Their ways are better"

◆ Psychological Term: Psyche

Psyche = the human **mind**, including:

- Thoughts
- Emotions
- Identity

- Self-image

➡ Fanon said **colonizer and colonized have completely different psyches**

🔥 Superiority–Inferiority Complex

What happens psychologically?

- Colonizer → **Superior complex**
- Colonized → **Inferiority complex**

🔑 Inferiority Complex

A deep feeling of **being less valuable or capable**

📌 Example (Pakistan/India context):

- Thinking English speakers are smarter
 - Feeling ashamed of local languages
 - Believing Western education = intelligence
-

😡 Anger, Rage & Misplaced Aggression

Fanon noticed:

- Colonized people feel **anger and rage**
- But this anger is **NOT directed at the colonizer**

Instead, it turns into:

- Religious conflicts
- Ethnic violence
- Tribal fights
- Political chaos

🔑 Misplaced Aggression

Directing anger at the **wrong target**

📌 Example:

- Poor people fighting each other instead of questioning unjust systems

➡ Fanon said:

| The colonizer encourages this division to maintain control

Colonial Mentality (VERY IMPORTANT)

Colonial Mentality

A psychological condition where:

- Colonized people believe:
 - Colonizer's culture = superior
 - Their own culture = inferior

Includes:

- Language preference (English > Urdu/regional)
- Lifestyle imitation
- Cultural shame

📌 Example:

- Feeling embarrassed wearing traditional clothes
 - Believing foreign products are always better
-

Fanon's View on Mental Illness

Fanon believed mental illness in colonies comes from:

1 Suppressed rage

2 Colonial mentality

 Suppressed Rage

Anger that cannot be expressed openly and turns inward

➡ This leads to:

- Depression
 - Anxiety
 - Psychosomatic illness
 - Identity confusion
-

Fanon's Method of Treatment (VERY UNIQUE)

Fanon observed:

When patients:

- Became politically aware
- Joined liberation movements
- Fought for dignity

➡ Their mental health **improved**

His "therapy" involved:

- Making patients **aware of oppression**
 - Helping them **reject inferiority**
 - Encouraging **active resistance**
-

Resistance Does NOT Mean Only Violence

Fanon clearly stated:

Resistance can be through:

-  **Education** (schools, universities)
-  **Medicine & research**
-  **Sports**
-  **Science**

- 🗣️ **Cultural revival**

➡️ Any activity that restores **self-worth and dignity**

🇨🇳 **PSYCHOLOGY IN CHINA (Lesson 42)**

Before 1949:

- Influenced by **American psychology**
- Courses taught at **Peking University**

Key Influences:

💠 **William James**

Founder of **Functionalism**

🔑 **Functionalism**

Focuses on:

- What the mind **does**
- How consciousness helps us **adapt**

🔑 **Epiphenomenon**

Something that has **no real function**

➡️ James said consciousness is **NOT useless**

💠 **John Dewey**

- Educationist
- Believed education should match **children's needs**

🔑 **Child-Centered Education**

Education based on:

- Age
- Development

- Interests
-

After 1949 (Communist Revolution)

- Psychology recognized as a **science**
- 1950 → Official status
- 1956 → National psychology commission

Three Major Branches:

1 Clinical Psychology

- Diagnosis & treatment of:
 - **Schizophrenia** (loss of reality)
 - **Manic Depressive Psychosis** (now Bipolar Disorder)

Speedy Synthetic Method

A fast, combined approach to treatment

2 Psychology of Work/Labor

- Manual labor considered **superior**
- Goal: Increase **efficiency**

Work Psychology

Study of:

- Productivity
 - Motivation
 - Human efficiency
-

3 Educational Psychology

- Moral and ethical training
- Manual labor included in education

- Research on child development
-

PSYCHOLOGY IN PAKISTAN

After 1947:

Only **two institutions** offered psychology:

- Dacca (East Pakistan)
- Government College Lahore

Expansion:

- Punjab University
 - Karachi University
 - Peshawar University
 - National Institute of Psychology (Islamabad)
-

Major Areas Taught:

Psychodynamics

- Freud & Jung
- Unconscious mind

Psychodynamics

Study of inner mental forces and conflicts

Clinical Psychology

- Diagnosis and therapy

Social Psychology

- Group behavior

- Attitudes
- Social influence

◆ Experimental Psychology

- Laboratory research

◆ Psychological Measurement

- Tests
 - Intelligence scales
 - Personality assessment
-

Employment of Psychologists in Pakistan

Graduates work in:

- Armed forces
 - Education
 - Labor departments
 - Public Service Commission
 - Advertising & marketing
 - Private clinical practice
-

FINAL TAKEAWAY

Key Ideas to Remember:

- Colonization affects **mental health**
- Inferiority is **learned**, not natural
- Mental health improves with **self-respect**
- Psychology in Third World countries developed after independence

- Fanon connected **psychology with freedom**
-

1) What is meant by “Third World countries” in psychology?

Answer

In psychology, *Third World countries* refer to nations that achieved political independence and self-rule after World War II and were previously under colonial domination by European powers or the United States. The term is used historically and politically, not to imply inferiority. Psychologically, these countries are studied to understand how colonialism affected identity, mental health, culture, and social behavior. Examples include Pakistan, India, many African nations, Vietnam, Indonesia, and China.

Explanation

Think of this term as a **history label**, not a judgment. Psychologists use it to study how long-term oppression shapes the mind.

Example

Pakistan became independent in 1947 after British rule; psychologists examine how colonial education and culture influenced self-image.

Tips

- Write: *historical and political term*
 - Never write: *poor or backward countries*
-

2) Why did psychologists become interested in Third World psychology after World War II?

Answer

After World War II, psychologists became interested in Third World psychology because many formerly colonized nations gained independence, raising questions about how colonization affected people's mental life. Psychologists wanted to

understand whether foreign domination influenced self-concept, identity, emotions, social behavior, and mental illness. This led to the development of post-colonial and Third World psychological perspectives.

Explanation

Freedom came, but **psychological wounds remained**. Psychologists wanted to study those invisible effects.

Example

People felt free politically but still believed Western culture was superior.

Tips

- Use words like *identity, self-concept, mental health*
-

3) Who was Frantz Fanon and why is he important in Third World psychology?

Answer

Frantz Fanon was a psychiatrist, psychologist, and revolutionary thinker who made major contributions to Third World and post-colonial psychology. He studied the psychological effects of colonization on both the colonizer and the colonized. Fanon is important because he linked mental illness, identity problems, and social conflict directly to colonial oppression. His ideas helped psychology move beyond Western perspectives.

Explanation

Fanon didn't just treat patients—he asked *why* they were suffering.

Example

He noticed Algerian patients improved when they joined anti-colonial struggles.

Tips

- Mention: *psychiatrist + colonization + mental health*
-

4) What are Frantz Fanon's major works and their themes?

Answer

Frantz Fanon's two major works are *Black Skin, White Masks* (1952) and *The Wretched of the Earth* (1961). *Black Skin, White Masks* focuses on the psychological effects of racism and internalized inferiority among colonized people. *The Wretched of the Earth* examines the psychological, social, and political consequences of colonialism and argues that liberation restores dignity and mental health.

Explanation

One book explains **inner damage**, the other explains **collective struggle**.

Example

Feeling ashamed of your own language is discussed in *Black Skin, White Masks*.

Tips

- Always match book with theme
-

5) What did Fanon mean by the terms "colonizer" and "colonized"?

Answer

According to Fanon, the *colonizer* is the dominant foreign power that controls land, resources, and people, viewing itself as superior. The *colonized* are the local people who are politically, economically, and culturally dominated. Fanon argued that this relationship creates two different psychological structures (psyches), where the colonizer develops superiority and the colonized develops inferiority.

Explanation

Colonization creates a **power imbalance inside the mind**.

Example

The colonizer believes his culture is advanced; the colonized begins to agree.

Tips

- Use words: *dominant, inferior, psychological difference*
-

6) How does the superiority–inferiority relationship affect the psyche of the colonized?

Answer

The superiority–inferiority relationship leads the colonized to develop an inferiority complex (a deep feeling of inadequacy). Over time, the colonized internalize the belief that their culture, language, and abilities are inferior. This damages self-esteem and identity and can result in emotional conflict, self-hatred, and psychological distress.

Explanation

When someone tells you “you are less” for years, you start believing it.

Example

Preferring English over one’s native language due to shame.

Tips

- Explain *internalization* (accepting beliefs as one’s own)
-

7) What is meant by “colonial mentality” according to Fanon?

Answer

Colonial mentality refers to the psychological condition in which colonized people accept the culture, values, language, and lifestyle of the colonizer as superior

while viewing their own culture as inferior. Fanon believed this mindset is a major source of identity conflict and mental illness in post-colonial societies.

Explanation

It is mental slavery even after political freedom.

Example

Thinking foreign products are always better than local ones.

Tips

- Write: *accepting superiority of colonizer*
-

8) How did Fanon explain anger and violence in colonized societies?

Answer

Fanon explained that colonized people experience intense anger and rage due to oppression, humiliation, and injustice. However, this anger is often misdirected toward fellow colonized individuals instead of the real oppressor. The colonizer encourages this division to maintain control, resulting in social conflict, political instability, and violence.

Explanation

Anger exists, but it hits the **wrong target**.

Example

Ethnic or sectarian violence within oppressed communities.

Tips

- Use term *misdirected aggression*
-

9) How did Fanon link colonization to mental illness?

Answer

Fanon believed mental illness in colonized societies results from suppressed rage and internalized colonial mentality. The constant denial of dignity, combined with acceptance of inferiority, creates psychological tension that manifests as depression, anxiety, and other disorders. Thus, mental illness is not only individual but also social and political.

Explanation

The mind breaks under constant pressure and silence.

Example

Depression caused by loss of identity and self-worth.

Tips

- Connect *social causes* with *mental illness*
-

10) What treatment approach did Fanon suggest for the colonized?

Answer

Fanon suggested that treatment should involve making individuals aware of their oppression and helping them reject colonial mentality. He believed participation in liberation struggles—through education, social reform, cultural revival, or political action—restores dignity and improves mental health. Healing, for Fanon, was both psychological and social.

Explanation

Awareness + dignity = healing.

Example

Students advancing education to challenge inferiority.

Tips

- Mention *not only guns—education and culture too*
-

11) What was the state of psychology in China before 1949?

Answer

Before 1949, psychology in China was heavily influenced by American psychology, particularly functionalism, behaviorism, and psychoanalysis. Universities such as Peking University taught psychology using translated works of William James and John Dewey. The focus was on understanding mental functions and educational needs.

Explanation

China borrowed psychology before creating its own system.

Example

Teaching William James' ideas on consciousness.

Tips

- Write *American influence*
-

12) How did psychology develop in China after the 1949 revolution?

Answer

After the 1949 Communist Revolution, psychology was officially recognized as a science in China. The government supported its development, and three main branches were established: clinical psychology, psychology of work and labor, and educational psychology. Psychology was aligned with national goals and social development.

Explanation

Psychology became a **tool for nation-building**.

Example

Research to improve worker efficiency.

Tips

- Link psychology with *state planning*
-

13) What were the major branches of psychology in post-revolution China?

Answer

The three major branches were clinical psychology (diagnosis and treatment of mental disorders), psychology of work and labor (improving productivity and efficiency), and educational psychology (moral development, learning, and child growth). These branches reflected China's social and political priorities.

Explanation

Each branch served society directly.

Example

Educational psychology focused on moral training.

Tips

- List all three clearly
-

14) How did psychology develop in Pakistan after independence?

Answer

After independence in 1947, psychology in Pakistan developed gradually. Initially, only two institutions offered master's programs. Over time, universities such as Punjab University, Karachi University, and Peshawar University expanded

psychology education. Areas like clinical psychology, social psychology, and psychological measurement became prominent.

Explanation

Pakistan built psychology step by step.

Example

Establishment of National Institute of Psychology.

Tips

- Mention *post-1947 expansion*
-

15) What are the main fields and applications of psychology in Pakistan?

Answer

Major fields in Pakistan include clinical psychology, social psychology, psychodynamics, experimental psychology, and psychological measurement. Psychologists work in education, armed forces, labor departments, advertising, research organizations, and private clinical practice.

Explanation

Psychology is used in **health, education, and society**.

Example

Clinical psychologists treating mental disorders.

Tips

- Always add *employment areas*
-

1) Explain the concept of Third World psychology and its significance.

Answer

Definition:

Third World psychology refers to the study of psychological processes, mental health, behavior, and development in nations that gained independence after World War II and were previously colonized. It focuses on how colonization, oppression, and postcolonial conditions affect the psyche of individuals and communities.

Significance:

- **Understanding psychological impact of colonialism:**
 - Explores how colonization created superiority-inferiority complexes.
 - Studies the adoption of foreign culture, values, and language (colonial mentality).
- **Addressing identity and mental health issues:**
 - Identifies the relationship between oppression, rage, and mental disorders.
- **Guiding social and educational policies:**
 - Helps design education and social programs that restore dignity and self-worth.
- **Cultural relevance in psychology:**
 - Moves away from purely Western frameworks to consider local realities.

Key Points Table:

Aspect	Western Psychology	Third World Psychology
Focus	Individual behavior, cognition	Social, political, and historical context
Cause of mental issues	Internal conflicts	Colonization, oppression, social inequality
Method	Laboratory experiments	Field observation, social activism, cultural study
Example	Freud's psychodynamics	Fanon on colonial mentality and mental health

Examples:

- Pakistan and India after British colonization.
 - Algeria under French rule.
 - China under foreign influence before 1949.
-

Explanation (Simple English)

Third World psychology is about **studying the mind in countries affected by colonization**. Unlike Western psychology, which focuses mostly on the individual in isolation, Third World psychology looks at **how history, society, and politics shape mental health and behavior**. For example, people in Pakistan or Algeria may have internalized feelings of inferiority due to years of colonization, which can affect their confidence, education, and social life. Understanding this helps psychologists **treat mental health problems and design social programs** that are culturally sensitive.

Tip: Remember: *colonization = psychological impact, not just political*.

2) Discuss Frantz Fanon's contribution to Third World psychology.

Answer

Frantz Fanon (1925–1961)

- Psychiatrist, psychologist, and revolutionary thinker
- Born in Martinique (French colony), educated in France
- Worked in Algeria, studying mental health under colonial oppression

Major Contributions:

1. Psychological impact of colonization:

- Colonization creates two groups: colonizer and colonized.
- Colonized develop **inferiority complex**; colonizer develops **superiority complex**.

- Leads to **identity conflict, mental illness, and social tension**.

2. Colonial mentality:

- Adoption of colonizer's culture, language, and values as superior.
- Rejecting one's own culture.

3. Anger and social conflict:

- Suppressed rage leads to violence, protests, or political unrest.
- Rage often misdirected against fellow colonized people.

4. Linking mental illness with social and political factors:

- Mental disorders often stem from oppression and internalized inferiority.

5. Method of psychological healing:

- Awareness of oppression.
- Reject colonial mentality.
- Participate in liberation struggles (political, educational, cultural, or social).

6. Major works:

- *Black Skin, White Masks* (1952) → Racism, identity, inferiority complex.
- *The Wretched of the Earth* (1961) → Liberation, psychological healing, social change.

Key Table – Fanon's Ideas Simplified:

Concept	Meaning	Psychological Effect	Example
Colonizer	Oppressor	Superiority complex	French rulers in Algeria
Colonized	Oppressed	Inferiority complex	Algerian people under French rule
Colonial Mentality	Accepting colonizer as superior	Identity conflict, low self-esteem	Preferring foreign language over native
Suppressed Rage	Anger not expressed properly	Depression, social conflict	Sectarian violence instead of anti-colonial protest
Liberation Healing	Awareness + action	Mental health improves	Students resisting colonial education

Explanation (Simple English)

Fanon studied **how colonization hurts the mind**, not just the body or society. He showed that mental problems in colonized people often come from **feeling inferior and internalizing the colonizer's culture**. For example, Algerians under French rule felt ashamed of their own traditions and languages, which caused anxiety and depression. Fanon suggested that **mental health improves when people regain awareness of their dignity and fight for freedom**, not only with guns, but through **education, cultural revival, and social work**.

Tip: Think of Fanon as saying: *Healing = self-respect + active participation in change*.

3) Explain the psychological effects of colonization according to Fanon.

Answer

Fanon identified several key psychological effects of colonization:

1. Inferiority Complex

- Colonized people believe they are less capable and less valuable than the colonizer.

2. Internalized Oppression

- Colonized adopt colonizer's culture and language, rejecting their own traditions (*colonial mentality*).

3. Suppressed Anger (Rage)

- Anger at oppression is often misdirected against fellow colonized individuals.

4. Mental Disorders

- Depression, anxiety, identity confusion, psychosomatic illnesses.

5. Social Conflict

- Divisions along religion, tribe, language, or culture are intensified by colonizers to maintain control.

Examples:

- Choosing English names over native names in Pakistan or India.
- Ethnic conflicts in colonies manipulated by rulers.
- Students feeling ashamed of local customs in Algeria.

Diagram (Simplified):

Colonization → Inferiority Complex → Mental Illness
 → Internalized Colonial Mentality → Identity Crisis
 → Suppressed Rage → Misplaced Aggression → Social Conflict

Explanation (Simple English)

Colonization changes the **way people think about themselves**. Fanon said that mental illness is not just about the brain; it comes from **social oppression and internalized inferiority**. For example, if someone grows up being told that foreign culture is better, they may feel shame for their own traditions. Their anger may also be directed at neighbors instead of oppressors. This is why colonized societies often have **internal divisions and unrest**.

Tip: Remember the chain: *Colonization → Inferiority → Rage → Social conflict*.

4) Describe the development of psychology in China before and after 1949.

Answer

Before 1949 (Western Influence)

- Psychology influenced by **American psychology**.

- Universities like **Peking University** offered courses based on American textbooks.
- Major influences:
 - **William James** → Functionalism, consciousness helps adaptation.
 - **John Dewey** → Child-centered education; teaching based on student needs.
- Psychology included **behaviorism and psychoanalysis**.

After 1949 (Communist Revolution)

- Psychology officially recognized as a science (1950).
- Government actively promoted research and education.
- Establishment of three major branches:

1. Clinical Psychology

- Diagnosis & treatment of mental disorders (schizophrenia, bipolar disorder)
- "Speedy Synthetic Method" for treatment

2. Psychology of Work/Labor

- Manual labor emphasized as superior to mental labor
- Efficiency improvement techniques developed

3. Educational Psychology

- Moral and ethical development
- Manual labor incorporated in schools
- Child developmental stages studied

Examples:

- Translating William James' books to Chinese.
- Manual labor classes for students after 1949.

Explanation (Simple English)

Before 1949, Chinese psychology **copied Western ideas**. After the Communist revolution, psychology became **practical and nationalistic**—serving the country's needs. Clinical psychology helped treat mental illness, work psychology improved labor efficiency, and educational psychology shaped students' morals and growth.

Tip: Remember: *Before 1949 = American influence; After 1949 = state-directed practical psychology.*

5) Describe the development of psychology in Pakistan after independence.

Answer

Initial Phase (1947–1950s)

- Only two institutions offered psychology:
 - Government College Lahore (Punjab University)
 - Dacca University (East Pakistan, now Bangladesh)

Expansion Phase

- Universities added psychology departments:
 - Punjab University
 - Karachi University
 - Peshawar University
- National Institute of Psychology (NIP) established in Islamabad

Major Fields Taught

- Psychodynamics (Freud/Jung)
- Clinical Psychology
- Social Psychology
- Experimental & General Psychology
- Psychological Measurement

Applications

- Graduates employed in:
 - Armed forces
 - Education departments
 - Labor departments
 - Public sector (research and administration)
 - Private practice (clinical and consulting)

Examples:

- Clinical psychologists treating patients in hospitals
- Psychologists working in advertising to study consumer behavior

Table – Psychology in Pakistan:

Area	Focus	Example
Clinical	Mental disorders	Hospital therapy
Social	Group behavior	Social campaigns
Psychodynamics	Unconscious mind	Freudian counseling
Measurement	Testing & assessment	IQ, personality tests
Education	Child development	School programs

Explanation (Simple English)

After 1947, Pakistan **gradually built its psychology system**. At first, only a few universities offered psychology, but later it expanded across the country. Psychologists work in **health, education, research, and government**, helping society solve practical problems. For example, clinical psychologists treat mental illness, and social psychologists design awareness programs.

Tip: Remember *initial phase* → *expansion* → *practical application*.

Section 1: True/False Questions

1. **Fanon believed that colonized people internalize the colonizer's culture, language, and values.**

- True 

Explanation: This is called **colonial mentality**, where the colonized consider foreign culture superior.

1. **According to Fanon, the colonizer feels inferior compared to the colonized.**

- False 

Explanation: The colonizer develops a **superiority complex**, while the colonized develops inferiority.

1. **Third World psychology studies the mental and social impact of colonization.**

- True 

Explanation: It focuses on identity, mental health, and social behavior in post-colonial societies.

1. **Fanon recommended that liberation struggles should only involve violent conflict.**

- False 

Explanation: Fanon emphasized **education, cultural revival, and social action**, not only armed struggle.

1. **Before 1949, Chinese psychology was influenced primarily by American psychologists.**

- True 

Explanation: Textbooks by William James and John Dewey were taught in Chinese universities.

Section 2: Simple Multiple-Choice Questions

1. Who wrote *Black Skin, White Masks*?

- a) William James
- b) John Dewey
- c) Frantz Fanon ✓
- d) Sigmund Freud

Explanation: Fanon wrote *Black Skin, White Masks* in 1952, analyzing psychological effects of colonization.

1. Which of the following is **NOT** a branch of psychology developed in China after 1949?
 - a) Clinical Psychology
 - b) Educational Psychology
 - c) Work/Labor Psychology
 - d) Psychoanalytic Psychology ✓

Explanation: Psychoanalysis was influential before 1949 but was not a formal branch after the Communist revolution.

1. Colonial mentality is best defined as:
 - a) The colonizer's belief that they are superior
 - b) Adoption of the colonizer's culture by the colonized ✓
 - c) Anger directed at the colonizer
 - d) Psychological disorders caused by genetics

Explanation: Colonial mentality occurs when the colonized accept foreign culture as superior.

1. Which of the following is an example of **misdirected rage** in colonized societies?
 - a) Protest against the colonizer
 - b) Fighting among different ethnic groups under colonial rule ✓
 - c) Writing literature against oppression
 - d) Educational reform

Explanation: Fanon noted that anger is often redirected at fellow colonized groups, not the colonizer.

1. Which psychologist emphasized **child-centered education** in early 20th century China?
 - a) William James
 - b) John Dewey 
 - c) Fanon
 - d) Skinner

Explanation: Dewey promoted education based on children's needs, interests, and development.

Section 3: Conceptual MCQs

1. What is the **primary cause of mental illness** in Fanon's view?
 - a) Genetic factors
 - b) Suppressed rage and colonial mentality 
 - c) Poor diet and environment
 - d) Lack of education

Explanation: Mental disorders in colonized people stem from oppression, internalized inferiority, and unexpressed anger.

1. Which term describes the psychological division between the colonizer and colonized?
 - a) Social psychology
 - b) Superiority–inferiority complex 
 - c) Behaviorism
 - d) Functionalism

Explanation: Colonizer develops superiority; colonized develops inferiority, creating social and psychological tension.

1. Which of the following best describes **Third World psychology**?

- a) A Western approach to individual behavior
- b) Study of mental processes in post-colonial societies 
- c) A form of psychoanalysis
- d) A branch of educational psychology

Explanation: Third World psychology focuses on social, political, and historical context, not just individual cognition.

Section 4: Situational MCQs

1. **Scenario:** A student in Pakistan refuses to speak Urdu at school because they believe English is superior. This is an example of:

- a) Inferiority complex
- b) Colonial mentality 
- c) Functionalism
- d) Psychoanalysis

Explanation: Adopting the colonizer's language as superior shows **colonial mentality**.

1. **Scenario:** In Algeria, two tribes under French rule fight each other while the colonizer continues to dominate. According to Fanon, this reflects:

- a) Natural tribal conflict
- b) Misdirected rage 
- c) Psychodynamic repression
- d) Cognitive dissonance

Explanation: Colonized people's anger is **misdirected against fellow colonized** rather than the oppressor.

1. **Scenario:** After the Chinese Communist revolution, psychologists start developing ways to improve worker efficiency in factories. Which branch is this?

- a) Educational Psychology

b) Work/Labor Psychology ☒

c) Clinical Psychology

d) Social Psychology

Explanation: Psychology of work/labor focuses on **productivity and efficiency**, often in manual labor.

1. **Scenario:** A Pakistani clinical psychologist encourages patients to learn about their history, culture, and participate in social reforms to improve mental health. This approach is most similar to:

a) Psychoanalytic therapy

b) Fanon's postcolonial psychological healing ☒

c) Cognitive-behavioral therapy

d) Behaviorism

Explanation: Fanon emphasized **consciousness of oppression and active participation** for psychological healing.

Section 5: Tricky MCQs

1. Which of the following statements is TRUE according to Fanon?

a) Colonized individuals naturally feel inferior due to genetics.

b) Colonizer encourages divisions among the colonized to maintain control ☒

c) Mental illness has nothing to do with political conditions.

d) Only armed struggle can heal mental illness.

Explanation: Fanon noted that **colonizers maintain power by misdirecting rage**, and healing can occur through non-violent action.

1. Before 1949, which of the following influenced Chinese psychology the MOST?

a) Soviet psychology

b) American psychology ☒

c) Japanese psychology

d) Indian psychology

Explanation: William James, John Dewey, and other American psychologists shaped Chinese psychology before the revolution.

1. Which of these is NOT a recommended method for psychological healing in colonized societies according to Fanon?

a) Education and research

b) Cultural revival

c) Armed struggle only 

d) Awareness of oppression

Explanation: Fanon promoted **various forms of active participation**, not solely violent conflict.

Cheat Sheet – Psychology in the Third World

1 Key Terms and Definitions

Term	Definition	Example	Memory Hook
Third World Countries	Nations gaining independence after WWII, previously colonized	Pakistan (1947), India, China, Algeria	"Third = Post-colonial nations"
Colonizer	Dominant foreign power imposing control	British in India, French in Algeria	"Colonizer = Controller"
Colonized	Oppressed local population under colonial rule	Algerians under French	"Colonized = Controlled"
Psyche	The human mind, including thoughts, emotions, identity	Inferiority complex in colonized	"Psyche = Mind + Soul"

Term	Definition	Example	Memory Hook
Inferiority Complex	Feeling less valuable or capable than others	Preferring English over native language	"Inferior → Shame"
Superiority Complex	Feeling more capable or important than others	Colonizer's self-image	"Superior → Dominant"
Colonial Mentality	Adopting colonizer's culture and considering it superior	Buying foreign products	"Colonial = Copy foreign"
Suppressed Rage / Misplaced Anger	Anger caused by oppression but directed wrongly	Ethnic fights in Algeria	"Rage misdirected → social conflict"
Functionalism	Study of mental functions and adaptation	William James' ideas on consciousness	"Function = purpose of mind"
Child-Centered Education	Teaching based on children's needs and interests	John Dewey's method	"Kids first → learning fits them"
Clinical Psychology	Diagnosis and treatment of mental disorders	Treating schizophrenia	"Clinic = treatment"
Educational Psychology	Study of learning, child growth, moral development	Moral education in China	"School psychology"
Work/Labor Psychology	Study of productivity and efficiency in work	Manual labor improvement in China	"Work psychology = efficiency"

2 Important Psychologists

Psychologist	Contribution	Example / Note	Memory Hook
Frantz Fanon	Effects of colonization on mental health, colonial mentality, rage	<i>Black Skin, White Masks, The Wretched of the Earth</i>	"Fanon = Freedom + Psychology"
William James	Founder of functionalism, consciousness helps	Consciousness is not useless	"James = Function of mind"

Psychologist	Contribution	Example / Note	Memory Hook
	adaptation		
John Dewey	Child-centered education	Education must meet children's needs	"Dewey = Kids first"
Sailor	Early psychology lectures in China, influenced functionalism	Lectures before 1949	"Sailor = sailed ideas to China"

3 Key Concepts

Colonizer-Colonized Dynamics

- Colonizer → Aggressor, superiority, dominates
- Colonized → Submissive, internalizes inferiority
- Result → Mental health issues, social conflict

Fanon's Psychological Insights

- **Colonial Mentality** → Identity conflict, inferiority
- **Suppressed Rage** → Depression, misdirected aggression
- **Healing** → Awareness + liberation (not just guns, also education, culture)

Timeline: Psychology in China & Pakistan

Country	Period	Key Developments	Notes
China	Before 1949	American influence: functionalism, behaviorism, psychoanalysis	William James & John Dewey taught
	After 1949	Recognized as science; 3 branches: clinical, educational, work psychology	Practical + nation-building focus
Pakistan	1947	Independence; only 2 master's programs: Lahore & Dacca	Initial phase

Country	Period	Key Developments	Notes
	1950s–1980s	Expansion to other universities; NIP established	Clinical, social, psychodynamics, measurement

4 Fanon's Psychological Chain – Memory Table

Cause	Effect	Example
Colonization	Inferiority complex	Preferring English over native languages
Colonizer domination	Superiority complex	Colonizer imposes culture as best
Suppressed rage	Depression & anxiety	Feeling powerless under colonial rule
Misdirected anger	Social/ethnic conflict	Fighting within colonized groups
Awareness & liberation	Mental healing	Students learning history, culture, resisting colonial influence

Memory Hook: *Colonization → Inferiority → Rage → Conflict → Awareness → Healing*

5 Mnemonics for Quick Recall

1. "C3R" for Fanon's key ideas:

- **C** → Colonized vs Colonizer
- **C** → Colonial mentality
- **C** → Conflict (misdirected rage)
- **R** → Recovery via awareness/liberation

2. "C.E.W." for China's post-1949 branches:

- **C** → Clinical Psychology
- **E** → Educational Psychology
- **W** → Work/Labor Psychology

3. "Psyche-SIG" for psychology in Pakistan:

- **S** → Social Psychology
- **I** → Psychodynamic / Individual
- **G** → General / Experimental Psychology

6 Quick Examples to Remember

Concept	Example
Colonial Mentality	Buying foreign products, using English names
Misplaced Rage	Sectarian fights instead of anti-colonial protest
Functionalism	Understanding how consciousness helps survival
Child-Centered Education	Designing schools for different age needs
Clinical Psychology in China	Treating schizophrenia with "Speedy Synthetic Method"
Psychology in Pakistan	Clinical practice, social research, armed forces employment
