

GSC201 GRAND QUIZ SOLVED

Teaching of General Science

1. Color, shape and texture all are examples of **properties**.
2. Which one of the following cannot see but we can feel them? **Gas**
3. In which approach students are involved in activities and directions are given by teachers? **Traditional**
4. Teachers use interactive material in class that stimulate children's: **Curiosity**
5. Pencil box and cart board are the examples of objects. **Opaque**
6. First phase of learning sequence template is consists of understanding the **Properties** of object.
7. Question and answer session is the example of Assessment. **Formative**
8. Second phase of learning sequence template is about the developing of . **Background**
9. When teacher help the students to find the right answer, then he/she is giving: **Scaffolds**

10. Third phase of learning sequence include. **Changes**

11. In which inquiry approach activity leads to content? **Guided inquiry**

12. Choice of material is depend on the of material. **Property**

13. ____ must be based on what children already know. **Instructions**

14. Which of the following did not change when placed in different containers?
Solids

15. Scientists have to be aware of, associated with the investigator, instruments and methods. **Bias**

16. Object through which we can easily see are objects. **Transparent**

17. Students develop an attitude of for exploring the properties. **Enthusiasm**

18. Melting and dissolving are two different. **Phenomena**

19. Conceptual change is a process of from ordinary ways of perceiving.
Transition

20. Teachers need to learn about the that students have. **Conceptual ideas**

21. _ was one of the first who tackle the problem of measuring the temperature. **Thomson**

22. _ Objects are often made from a variety of materials. **Manufactured**

23. Which skill can be used when giving a comment or remark after looking? **Observations**

24. Which one focuses on concept building when it becomes difficult in higher grades? **Learning**

25. We modify the scientific knowledge in the light of . **Reliable data**/evidence

26. _ must be based on what children already know. **Instructions**

27. _ effects how the learner perceives new information. **Prior knowledge**

28. Which skills are the combinations or blend of several skills? **Process**

29. Teachers interpret _ of student thinking. **Evidence**

30. Which one is conserved during physical and chemical changes? **Mass**

31. Students develop the skill to make connections with their immediate . **Environment**

32. For _ we need to mix the solids with liquids. **Dissolving**

33. The first thing to remember about writing a case study is that . **That case must have a problem**

34. Second category of learning objectives in teaching of general science is . **Skills**

35. Through which kind of material we can see things clearly? **Transparent**

36. There are types of solids. **3**

37. Students develop in representing observations. **Honesty**

38. Which kind of learners transforms prior knowledge to accommodate new scientific ideas? **Slow**

39. _ change its shape according to the shape and size of the object in which it is poured. **Liquids**

40. Instructor self-evaluation belongs to which kind of assessment: **Summative**

41. Which one is the explanation for the behavior of natural objects and phenomena? **Scientific theory**

42. Student's evaluation of the course is an example of which kind of assessment? **Summative**

43. Students develop the skill of _____ by using their senses. **Observation**

44. Which process help to gather information about what students know, understand and do with their knowledge? **Assessment**

45. Considering evidence, evaluating and drawing conclusions by assessing the data is the example of _____. **Interpreting**

46. Students do classification on the basis of some _____ : **Property**

47. There are _____ main features of fair test template. **4**

48. When learners identifying patterns or trends in their observations or measurements and noticing related changes. Then they are involved in: **Interpreting**

49. Through which kind of changes the material can be changed from solid to liquid to gas by heating or cooling but the kind of material stays the same? **Physical**

50. In sequence of learning template phase C represents: **Main content**

51. Recognizing and asking investigable questions is the example of _____. **Sub skills**

52. Children develop ideas, based on their everyday _____. **Experiences**

53. Which kind of material changed the color of things when viewed?

Translucent

54. Which one of the following dissolves faster in water? **Sugar powder**

55. Developing tentative explanations or hypotheses of observed phenomena is one of the step of? **Scientific inquiry/knowledge**

56. For we need to mix solids with liquids. **Dissolving**

57. Final examination is example of: **Summative Assessment**

58. Children deepen their experience of in a science classroom. **collective discussions**

59. In inquiry-based curricula, leads to the content or to the discovery of content. **Activity**

60. Using patterns in information or observation in forecasting outcomes of specific events that go beyond the data. **Predicting**

61. Thermo scope was used to measure the temperature. One of the characteristics that was described by the teacher is . **It was without the scales.**

62. Which of the following teaching provides continuous opportunities for formative assessment? **Inquiry based**

63. _ assessment provides feedback and information during the instructional process. **Formative**

64. Conceptual change is a process of _ from ordinary ways of perceiving.
Transition

65. We want children to learn not only the content but also. **scientific skills**

66. In which approach content is taught before doing any activity. **Traditional**

67. Which activity helps students engage in the construction of scientific evidence, explanations; advance their abilities to argue scientifically?

Participation in scientific practice and discourse

68. Which one of the following is important in scientific practices? **Keeping record of findings**

69. Which one of the following can be done at any time during instructions:
assessment

70. Using the senses and extending the senses by using tools or instrument as necessary is : **Observing**

71. Teachers must not give _ comments to the students in their assessment.
Judgmental

72. In scientific inquiry we communicate findings to larger peer group for .
Critical review

73. A reflective component to learning not only speeds up the time it takes to learn, but also makes it possible to learn things that one might never figure out through. **trial and error.**

74. In the approach content is taught before doing any activity. **Traditional**

75. _ use process skills to build a conceptual understanding of science content. **Students**
