Q.1 What concept is established when using fractions to answer "how much" in the activity "Oral Names for Parts of Units"?

A. Comparing fractions

B. Identifying mixed forms

C. Establishing fraction names

D. Writing concrete fractions

Q.2 Which form allows children to combine various methods like counting and covering subsets to find sums?

A. 4

B. 3

C. 1

D. 2

Q.3 Which behavior suggests a child understands how to write the second addition equation without further counting?

A. Counting

B. Skipping

C. Automatic

D. Covering

Q.4 In the "Chalkboard Race," how are teams organized to solve problems?

A. In small groups

B. In two teams

C. In pairs

D. Individually

Q.5 When does a child typically begin to develop the concept of fractions?

A. Early childhood

B. In adulthood

C. In high school

D. In college

Q.6 How many subsets are typically created when a set is partitioned for subtraction equations?

A. Two

B. One

C. Four

D. Three

Q.7 What is the purpose of using a lattice in the "Maneuvers on a Lattice" activity?

A. To practice handwriting

B. To draw patterns

C. To generalize math facts

D. To guess numbers

Q.8 What should children do first when writing subtraction equations for a partitioned set?

A. Subtract

B. Subset

C. Entire

D. Add

Q.9 What is a key concept children should learn when moving objects to make a set of ten?

A. Summation

B. Multiplication

C. Association

D. Division

Q.10 What property of addition is illustrated when stating both 4 + 2 = 6 and 2 + 4 = 6?

A. Associative property

B. Identity property

C. Distributive property

D. Commutative property
