Q.1 What is the physical representation for addition?

A. Addition of three numbers

B. Division of fraction

C. Union of two disjoint sets

D. Ratio of two numbers

Q.2 What is the physical representation for subtraction?

A. Division of fraction

B. Ratio of two numbers

C. Removal of a subset

D. Addition of a subset

Q.3 The role of division as the inverse operation for multiplication suffers from the same lack of understanding as that of:

A. Ratio

B. Subtraction

C. Addition

D. Division

Q.4 Partitioning a set into two subsets will be used to teach the commutative property of addition and later the connection between which one of the following property of addition and subtraction?

A. Additive

B. inverse operations

C. Multiplicative whole numbers

D. Closure of whole numbers

Q.5 Chalkboard Race and Beanbag Throw are are games that provides practice for--------.

A. Addition

B. Substraction

C. Division

D. Multiplication

Q.6 Partitions usual sequence from flannel board to chalkboard to which one of the following?

A. cupboard

B. textbook

C. Blackboard

D. worksheet

Q.7 Children know the addition facts up to sums of ten, which one of the following property of addition can be used to obtain facts involving sums of eleven to eighteen?

A. Multiplicative

B. Associative

C. Closure

D. Identity

Q.8 If two whole numbers are multiplied, which one of the following best refers to its product?

A. Interval

B. Ratio

C. Whole

D. Average

Q.9 The word fraction has as one of its dictionary meanings a ----------.

A. Spray

B. fragment.

C. Perfume

D. Whole
