OBJECTIVES BT403

BT-403 FINALTERM- 100%

GUESS PAPER 2023

Agricultural Biotechnology

BY SULMAN ALI

0341-7547044

1. Which possess half the number of chromosomes from a Diploid species.___***monoploids***
2. It has been estimated that __ is fixed by different legume crops by the microbial activities Of Rhizobium.__***40-250 kg N / ha / year***
3. Worldwide, there is percent global primary crop production from genetically modified crops,___***9%***
4. Canola is genetically engineered form was approved in___ ***1996,***
5. injecting a gene for a rat Growth hormone into a mouse embryo in___ ***1982.***
6. GMO stand for ___ ***genetically modified organisms***
7. Transformed cells with a single copy of the transgene usually show higher and More stable expression than multicopy lines, in which expression may suffer from Posttranscriptional ___ ***gene silencing.***
8. Rate of transportation ____ in plant with pathogenic attack ___ ***increase***
9. Hormone induce callus formation ___ ***cytokinin***
10. The genetic markers should be_____and_____: ***palymorphic;. Heterazygous***:
11. Almost perecent of corn grown in the U.S. is genetically modified.__***85%***
12. The creation of the first recombinant DNA molecules by Paul Berg in_____ ***1972***
13. _____ can usefully be defined as the branch of philosophy concerned witecide what is Morally wrong and what is morally right. ___***Ethics***
14. Glycine is___ acid ___ ***amino acid***
15. Which possess the half no of chromosomes from diploid species ***(monoploid)***
16. For tissue growth in the medium sucrose concentration of ***(2%)***
17. Almost ***(85)*** of corn grown in U.S is genetically modified
18. Rate of respiration ***(increases)*** in diseased plants
19. Blight disease is caused by ***(chlorosis)***
20. It has been estimated that ***(40-50 kg N/ ha/ year)*** is fixed by different legumes crops by microbial activity
21. In ***(India)*** technique of cyanobacteria inoculation to rice field being followed
22. Russian study of rat fed with GMO soy show ***(five)*** folds increase in mortality
23. ***(GM)*** Tomato can tolerate lengthier shelf life

24. RNA hydrolyzing enzymes (Such sterile male plants are created by introducing a gene coding for an Enzyme ***(barnase)***, which is an RNA hydrolyzing enzyme) that inhibits Pollen formation.)
25. Chilling injuries common in plant Except ***(Maize)***
26. ***(Ammonium nitrate)*** **Is** macronutrient for Murashige and skoog
27. Auxin Favor DNA duplication and Cytokinin enables the separation of ***(chromosomes separation)***
28. Growth Regulators/ growth promotors hormones ***(Auxins, Gibberellins, Cytokinin)***
29. How pesticides enter our body by ***(mouth, lungs, skin)*** (**2 times**)
30. In 1990 1st food product of biotechnology is ***(Cheese)***
31. Most callus will be initiated cut surface within***(3 to 8 weeks)***
32. Heat shock protein size of HSP100 class is ***(100 to 114 Kda)***
33. Which cause ripening ***(ethylene)***
34. How many phases of regeneration? ***(Three)***
35. Multiple form of same enzymes coded by different genes ***(Isozymes)***
36. Powdery mildew is ***(fungal disease)***
37. Commonly transformation occur in ***(bacteria)***
38. ROS is not found in….(The ROS production in plants is mainly localized in the chloroplast, Mitochondria and peroxisomes.)
39. Late blight of potato disease caused by ***(phytopthora infestants)***
40. Plastid genome _____***genetic structure***
41. Light stress is __***a-biotic***
42. Incorporation of genes from one to another _***Transformation***__
43. Herbiside used where _***weeds***__
44. .Types of genration _***two***__
45. Which is firstly used for genetic ***technique Bacteria***____
46. Which is work at moderate temperature and help in cells formation ___ ***20-28°C or 20 to 25***
47. Vessels are_***glasswares***___
48. .Ozone cause ---------***all of these***
49. .Apoenzyme are___ ***the protein part of an enzyme***
50. Optimum temperature for culture media _***22 to 28 degree C***__
51. Apoenzyme are……..***the protein part of an enzyme***
52. ozone causes……***all of these***
53. symptom of pesticides which are not for short time……
54. vessels used for culture **petri plates, test tubes, "Magenta boxes," bottles, and flasks…** (***lead to prevention water & mineral Translocation)***
55. herbicide are…….***chemicals used to kill weeds.***
56. Tumer causing bacteria……***Helicobacter pylori***
57. FR13A rice-type has high level flooding ***Tolerance***
58. Amount of CTAB bufer used for extraction of DnA--------***100ML***
59. Most abundant hormone in plants------***AUXIN***
60. Incubation of callus culture---------- ***26 - 28oC***
61. Plastid genome is? ***Genetic structure***
62. Anthesis is?---------- ***flowering period of plants***
63. Who created the first recombinent DNA?---------- ***Paul Berg***
64. ***Restriction digests, PCR, and DNA sequencing***.....techniques is commonly used to analyze plasmid DNA from bacterial colonies
65. ***very low***.....amount of DNA is delivered into plant cells by electroporation

66. 2007 systematic review found that most studies on non Hodgkin's lymphoma and.,.... disease ------ ***leukemia.***
67. some plants such as the tree of heaven and.....produce their own natural herbicide ----- ***juglans (walnuts)***
68. An over expression gene of EPSPS was detected in ..... ***petunia***
69. resistant to two or more herbicide families with same mechanisms of action is known as ... ***Cross Herbicide Resistance***
70. in club root disease of crucifers, DNA content is .,...folds increased --------- ***16 folds***
71. estimated global loss due to insect pests in potential yields of all crops is... ***s ~14%***
72. who created the first recombinant DNA molecule ..... ***Paul Berg in 1972***
73.
74. worldwide....% the global primary crop production from genetically modified crops***.--- 9%***
75. to increase the quantity of milk produced, cows are often given recombinant..... hormones -------- ***bovine growth or rBGH***
76. .....synthesis, cell wall***(magnesium)***
77. organogenesis take place in.., phase_____ ***third phase***
78. pythium and phytophthora causes the disease ..... ***DAMPING OFF***
79. the antioxidant machinery's has ....arms with the enzymatic components and non enzymatic antioxidant _____ ***two***
80. heat stress defined as the....in temperature beyond a threshold level _____***rise***
81. an allergen that triggers an allergic reactions in human could be silenced by a techniques named ---------- ***Gene Silencing or GM Techniques***
82. .....tomatoes can tolerate a lengthier transport time._____***GM***
83. these bacteria also called.,.....live freely in the soil but cannot fix nitrogen except for a strain of cowpea Rhizobium._____ ***rhizobia***
84. mycorrhizae help feed....._____ ***plants***
85. shoot proliferation was observed after..... weeks_____***TWO***
