

Cs625 Final term

Learning with Miss khattak

Long Questions:

Q1. Four Hacking Tools:

1. **Scanners** – Detect security weaknesses.
2. **Telnet** – Connects to remote systems.
3. **FTP** – Can be exploited for unauthorized access.
4. **Brute Force Attack** – Tries all password combinations.

Q2. Which of the following can be put on social media?

- **Infographics** ☐ (Yes, can be shared)
- **Phone Number** ☐ (Should not be shared)
- **CNIC** ☐ (Should not be shared)

Q3. Different types of software contracts:

- License Agreement
- Non-disclosure Agreement (NDA)
- Software Development Agreement
- Software Maintenance Agreement

Q4. Exclusive vs. Non-Exclusive Rights:

- **Exclusive Right:** Granted to only one party.
- **Non-Exclusive Right:** Can be shared with multiple parties.

Short Questions:

1. Three misuses of computers according to the Computer Misuse Act;

- Computer Fraud
- Unauthorized Access (Hacking)
- Unauthorized Alteration or Destruction of Information

2. Type of intellectual property right used for computer software and its compilation:

- Copyright
- Patent

3. Different categories of computer fraud:

- Input Frauds
- Output Frauds
- Program Frauds

4. CIA principles (Information Security Principles):

- Confidentiality
- Integrity
- Availability

Short Questions:

1. OECD full form:

Organization for Economic Co-operation and Development

2. GATT concerned with the intellectual property rights of which product piracy?

Software piracy (General Agreement on Tariffs and Trade (GATT) included discussions on intellectual property rights related to software and digital products.)

3. Three names of computer-controlled areas:

- Industry
- Medicine
- Transport

4. Precautions to protect yourself (from cyber threats & social media risks):

- Keep private information private
- Use strong passwords
- Be cautious about unknown links
- Use and maintain anti-virus software

5. True statement related to risk unlikely to happen:

- b) How to measure a risk situation that is unlikely to happen
-

Long Questions:

1. Moral Issues (related to the Internet & computing):

- **Plagiarism** (Copying someone's work without credit)
- **Sending spam emails** (Unsolicited emails that waste users' time)
- **Unauthorized monitoring** (Employers spying on employee internet use)
- **Using someone's Wi-Fi without permission** (Considered unethical and illegal in some places)
- **Manipulating images or videos** (Using photo editing software to distort reality)

2. Hacker's Creed (Five Principles by Steven Levy):

- Access to computers should be unlimited and total.
- All information should be free.
- Mistrust authority—promote decentralization.
- Hackers should be judged by their hacking skills, not criteria such as degrees, age, race, or position.
- You can create art and beauty on a computer.

3. Copyright Purposes (Five reasons for copyright protection):

- **Protects the rights of creators** (Ensuring they receive credit for their work)
- **Prevents unauthorized reproduction or distribution** (Illegal copying of software, books, music, etc.)

- **Encourages innovation and creativity** (By offering financial and legal benefits to creators)
- **Maintains originality** (Discouraging plagiarism and misuse of intellectual property)
- **Provides economic value to software and media industries** (Protects businesses that rely on original content)

4. Factors Affecting System Safety:

- **Hazard Analysis** (Identifying potential risks in a system)
 - **Requirements and Specification** (Clearly defining the system's safety requirements)
 - **System Reliability and Safety** (Ensuring the system functions correctly under expected conditions)
 - **Design and Development** (Following best practices in software and hardware design)
 - **Testing and Debugging** (Identifying and fixing vulnerabilities before deployment)
 - **Safety Integrity Analysis and Risk Assessment** (Evaluating how secure and fail-proof the system is)
 - **Proper Documentation** (Keeping records of safety measures and system procedures)
-

Short Questions:

1. Types of Intellectual Property Rights:

- Copyright
- Patent
- Trademark

2. OECD Full Form:

- Organisation for Economic Co-operation and Development

3. Competence Traits (Related to Software Engineers' Skills):

- Knowledge and ability to apply that knowledge
- Training and relevant experience

4. Three Key Points About Software Contracts:

- License Agreement
- Non-Disclosure Agreement (NDA)
- Software Development Agreement

5. Likelihood Example and Point:

- **Example:** "The likelihood of a hacker breaking into a system increases if weak passwords are used."
- **Point:** Likelihood is the probability of an event occurring in a risk assessment scenario.

6. What Should Not Be Shared on Social Media Websites:

- Phone number
 - CNIC (Identity Card details)
 - Home address
 - Bank details
 - Sensitive personal photos or information
-

Long Questions:

1. Five Factors Affecting System Safety:

- **Hazard Analysis** (Identifying potential risks in a system)
- **Requirements and Specification** (Defining system safety requirements)
- **System Reliability and Safety** (Ensuring the system functions correctly)
- **Testing and Debugging** (Identifying and fixing vulnerabilities)
- **Safety Integrity Analysis and Risk Assessment** (Evaluating system security and risks)

2. Moral Issues Related to the Internet & Computing:

- **Plagiarism** (Copying someone's work without credit)
- **Sending Spam Emails** (Unsolicited messages that waste time)
- **Unauthorized Monitoring** (Employers spying on employees' internet usage)
- **Using Someone's Wi-Fi Without Permission** (Illegal in many places)
- **Manipulating Images or Videos** (Editing photos to distort reality)

3. Computer Organization Base Level (Only Two Names):

- **Hardware Level** (Physical components like CPU, RAM, and storage)
- **Software Level** (Operating systems, applications, and programming languages)

4. Difference Between Exclusive and Non-Exclusive Rights:

- **Exclusive Right:** The right is granted to only one party, restricting others from using it.
 - **Non-Exclusive Right:** The right can be granted to multiple parties, allowing shared usage.
-
-

Short Questions:

1. Offenses Under the Computer Misuse Act:

- Unauthorized Access to Computer Material
- Unauthorized Access with Intent to Commit Further Offenses
- Unauthorized Modification of Computer Data
- Denial of Service (DoS) Attacks

2. Risk Control Strategies:

- Avoidance
- Mitigation
- Transfer
- Acceptance

3. Types of Intellectual Property:

- Copyright
 - Patent
 - Trademark
 - Trade Secret
-

Long Questions:

1. Types of Fraud (Computer Fraud Categories):

- **Input Fraud** (Entering false data into a system, like fake transactions)
- **Output Fraud** (Stealing or misusing system-generated information)
- **Program Fraud** (Altering software to manipulate results or bypass security)
- **Internet Fraud** (Phishing, identity theft, and online scams)

2. **Five Points of the Hacker's Creed (By Steven Levy):**

- Access to computers should be unlimited and total.
- All information should be free.
- Mistrust authority—promote decentralization.
- Hackers should be judged by their skills, not by their age, race, or position.
- You can create art and beauty with a computer.

3. **Four Issues Related to the Misuse of the Internet:**

- **Plagiarism** (Copying content without permission or credit)
 - **Cyberbullying** (Harassing or threatening individuals online)
 - **Identity Theft** (Stealing personal information for fraud)
 - **Spreading Misinformation** (Disseminating false or misleading content)
-

CS625 Professional Practices

Long :

1. 4 names of tools used for hacking
2. Which from the following can be put on social media:
 - Info graphics
 - Phone Number
 - CNIC

3. Name the different type software contracts.
4. 2 statements are given we have to answer that which one is exclusive right and which one is non-exclusive right?

Short :

1. 3 misuse of computer according to computer misuse act
2. what type of intellectual property right is used for computer software and compilation of the software.
3. Name the different categories of computer fraud.
4. Name the CIA principles

[4:34 PM, 1/31/2025] New Number: Asslamualikum

Jahanzaib Mughal

here's cs625 paper review

paper was very easy specially subjective part

and objective part lecture 7 main sy or Zaida tar

last topics sy thy hacking , or protection etc.

short main 3 lines de hui thi or pucha tha k

which line is true in following or illustration ki type puchi thi

long main b same type k question thy which 2 or 3 line true from following.

baki es subject ki tenshion na lain very easy paper ata hai

paper sy phlay ppt slides ya en ka audio lecture lazmi la lana

concepts lazmi clear ker lana

[4:34 PM, 1/31/2025] New Number: Cs625 11:30 29 jan

Short:

1. OECD full form
2. Gatt concerned the intellectual property rights of which product piracy?
3. 3 names computer controlled ares.
4. Precaution of preventing to protect yourself.
5. True krne ki statement thi risk unlikely ki
 - a)How to measure a risk situation is
 - b) " " " unlikely to happen have
 - c) " " " a dangerous situation is

6.

Long:

1.Moral issues.

2.hackers creed 5

3.copyright purposes 5

4.factor affecting system safety

[4:34 PM, 1/31/2025] New Number: paper CS625 , time--4pm

mcqs vu toppers file and quiz 3 and 4 files

short 1-intellectual rights
2-full form of OECD
3-competence of taits esy kerky hi tha kuch
4-contracts three points
5-likelihood ki example or point
6-what should not share on social media website
long 1- five factors affecting wala
2-moral issues
3-computer organization base level only two names
4-difference between exclusive or non exclusive
[4:34 PM, 1/31/2025] New Number: Cs625 11:30 29 jan

Short:

1. OECD full form
2. Gatt concerned the intellectual property rights of which product piracy?
3. 3 names computer controlled ares.
4. Precaution of preventing to protect yourself.
5. True krne ki statement thi risk unlikely ki
