PSY511 Quiz 3 File by Tanveer Online Academy

How do Evans and Cohen categorize stress dimensions?	**Controllability, predictability and duration**
How does the concept of crowding in urban areas impact individuals' psychological well-being?	**It results in heightened levels of stress and potential health issues**
The two hormones measured to assess the immediate response to stress are:	**Adrenaline and Cortisol**
How do chronic stressors differ from cataclysmic events in terms of their impact?	**Chronic stressors have lower intensity but longer duration.**
What is the projected population of the world by 2030 according to current trends?	**10 billion**
How do psychologists typically help individuals to overcome phobias?	**By gradually exposing them to their fears in a controlled environment.**
How does the lack of control over environmental stressors affect the stress response?	**It exacerbates the stress response.**
Physiological abnormalities observed among the rat population in Calhoun's study included:	**Development of tumors in mammary and sex glands**
What phenomenon occurs when beliefs about a person influence their behavior?	**Self-Fulfilling Prophecy.**

Which of the following actions is NOT a way to reduce the negative effects of rapid urbanization?	**Destruct the natural habitats**
Which of the following actions is NOT a way to reduce the negative effects of rapid urbanization?	**Destruct the natural habitats**
Which judgmental bias involves perceiving a group of people in a certain way?	**Stereotyping.**
The population density is the study of:	**Crowding**
Psychological effects of urbanization include loneliness and increased crime rates.	**True**
Maria experiences stress due to her job dissatisfaction, which she encounters almost every day. How would you classify this stressor based on its duration and intensity?	**Chronic stressor**
What influences an individual's tendency to conform?	**Both internal dispositions and situational factors.**
What does the concept of consistency in behavior over time suggest in attribution theory?	**Internal factors play a significant role in behavior.**
What is the main focus of measuring stress psychologically?	**Examining psychiatric symptoms**
What is the Assumed Similarity bias primarily based on?	**Understanding others through our own experiences.**
What is the significance of attitudes toward the source of stress?	**They act as filtering devices in perception of the stressor**
What is the main focus of the stress-strain hypothesis?	**Mediating the impact of life events on subsequent health and illness**
Which province in Pakistan has the highest level of urbanization?	**Punjab**

What is the main concern regarding the increase in urban population in Pakistan?	**Overcrowding and inadequate housing in urban areas**
What is the primary reason for conformity?	**A desire to align with prevailing standards.**
Which factor moderates the impact of stressors by acting as filtering devices in perception?	**Control**
How does the lack of control over environmental stressors affect the stress response?	**It exacerbates the stress response.**
What factor influences conformity by making individuals doubt their own judgment?	**Dissenters within the group**
What is the Assumed Similarity bias primarily based on?	**Understanding others through our own experiences.**
Which city in Sindh has the highest concentration of urban population?	**Karachi**
Sarah experiences stress while preparing for her exams. Which aspect of stress measurement would this scenario best illustrate?	**Intensity of stressors**
Which term refers to attributing success to internal factors and failure to external factors?	**Self-serving bias.**
Ahmad experiences chronic stress due to work-related pressure and subsequently develops hypertension. Which model of adverse health would best explain this scenario?	**Model B: Stress and Strain Hypothesis**
What did the helicopter pilot witness during the My Lai Massacre?	**The massacre of unarmed civilians.**
_____ is used by Calhoun to describe the confined area within the rat populations in his study.	**Behavioral sink**
What do customs primarily consist of?	**Everyday routine behavior**
What does attribution theory primarily seek to understand?	**How people perceive and judge others' behaviors.**

How does maintaining a balanced state of readiness affect performance?	**Leads to stability in arousal levels**
According to Beck (1983), what analogy is used to describe the reticular system?	**A fire alarm**
Which appraisal type focuses on the potential to overcome a stressor?	**Challenge appraisal**
What are the three stages of Hans Selye's Adaptation Syndrome?	**Alarm Reaction, Stage of Resistance, Stage of Exhaustion**
What is a characteristic of individuals with a hardy personality?	**Resilience and determination in the face of adversity**
What physiological response occurs when individuals experience extreme readiness?	**Heightened metabolism rates**
What does the reticular activating system primarily regulate?	**Consciousness and alertness**
What primarily defines stress in the response-based definition?	**Physiological responses**
What is the role of the Reticular Activating System (RAS) in arousal mechanisms?	**Triggering readiness**
How do attitudes towards stressors influence appraisal?	**They amplify the stress response**
Which of the following model suggests that personal dispositions and social conditions make independent causal contributions to the occurrence of pathology?	**Model D: Additive Burden Hypothesis**
What is the impact of excessive arousal or stress on performance?	**Impairment**
What is the main focus of the Cannon-Bard Theory?	**Emotions and physiological responses occur simultaneously but independently**
According to Hans Selye, what triggers the release of adrenal corticoids during stress?	**Production of ACTH by the pituitary**
What is the James-Lange Theory of Emotion primarily focused on?	**The physiological responses as the basis for emotional experiences**
Which of the following is considered a qualitative measurement of stress?	**Emotions and coping strategies**

How do individuals with a hardy personality typically respond to setbacks?	**They view setbacks as opportunities for growth**
In the context of stress, what is the main purpose of secondary appraisal?	**Selecting coping behaviors**
Which type of appraisal focuses on future dangers?	**Threat appraisal**
Which factors contribute to an individual's resilience in dealing with stress?	**Personality traits, social support networks, and genetic predispositions**
How does perceived control over a stressor affect an individual's response?	**It can contribute to better coping.**

People with a high need for achievement tend to select what kind of tasks? More challenging tasks

Adaptation involves many kinds of biological systems that may include all EXCEPT: Sex Chromosomes

All of the following situations are categorized in Cataclysmic events except: Neighborhood problems

Which of the following is characterized as a process that unfolds as we encounter a stressor, become aware of its danger, mobilize our efforts to cope with it, engage in confronting it, and succeed or fail in adapting to it? Stress

Which of the following may go unnoticed until it interfere with some important goal or directly threaten one's health? Stressor

Which of the following term is used when one conforms to be liked or accepted by the members of the group? Normative Influence

Which of the following represents those stressors whose sudden and powerful impact is more or less universal in eliciting a response and demand a great deal of effort for effective coping? Cataclysmic Events

All of the following will decrease after long term exposure to stress EXCEPT: Sensitivity

Hans Selye (1976) postulated that human go through three stages during stress, what is the first stage? Alarm reaction

Increased cardiovascular reactivity, muscle potential changes and skin conductance measures have been used to show the effects of _____. Acute stress

Which of the following provides a biological advantage to the organism, enabling it to respond more rapidly to danger? Adrenaline

American psychologist Henry Murray (1893-1988) developed a theory of personality, organized around which of the following? Motives, presses, and needs

Which of the following may be an example of ambient stressors? Air Pollution

The State-Trait Anxiety Inventory is used to measure which one of the following? Stress

Subjects were asked to judge line lengths while working in a group in which of the followings? Asch's experiment

Which of the following sources of stress can be included in natural catastrophes? Volcanic eruptions Which of the following is an example of Stimulus based stress? A horror Movie

Which of the following represent the relatively continuous, stable, and intractable conditions of the environment such as work overload, poverty, family conflicts and air pollution? Ambient stressors
