MCQS for EDU431

Educational Assessment Mcqs For PSC Headmaster & Teaching Exams

Assessment in Education

Instrument used for measuring sample of behavior is?

A. Test

B. Measurement

C. Assessment

D. Evaluation

Answer is = A

Limited to quantitative description of pupil’s performance is?

A. Test

B. Measurement

C. Assessment

D. Evaluation

Answer is = B

The purpose of the evaluation is to make?

A. Decision

B. Prediction

C. Judgment

D. Opinion

Answer is = C

The purpose of evaluation is to make judgment about educational?

A. Quanitiy

B. Quality

C. Teme period

D. Age

Answer is = B

Evaluation that monitors learning progress is?

A. Placement evaluation

B. Formative evaluation

C. Diagnostic evaluation

D. Summative evaluation

Answer is = B

A formal and systematic procedure of getting information is?

A. Test

B. Measurement

C. Assessment

D. Evaluation

Answer is = A

The process of obtaining numerical value is?
A. Test
B. Measurement
C. Assessment
D. Evaluation
Answer is = B
A sum of questions is?
A. Test
B. Measurement
C. Assessment
D. Evaluation
Answer is = A
The first step in measurement is?
A. Decision of what to measure
B. Development of the test
C. Administering the test
D. None
Answer is = A
The purpose of formative evaluation is?
A. Decision of what to measure
B. Development of the test
C. Administering the test
D. Monitoring progress of students
Answer is = D
To assess achievement at the end of instruction is?
A. Placement Assessment
B. Formative Assessment
C. Summative Assessment
D. Diagnostic Assessment
Answer is = C
Vast of all in scope?
A. Test
B. Measurement
C. Assessment
D. Evaluation
Answer is = D
The least in scope is?
A. Test
B. Measurement

C. Assessment
D. Evaluation
Answer is = A
Permanent difficulties in learning are investigated in?
A. Placement Assessment
B. Formative Assessment
C. Summative Assessment
D. Diagnostic Assessment
Answer is = D
Broader in meaning is?
A. Aims
B. Objectives
C. Instructional objectives
D. Specific Objectives
Answer is = A
Procedures used to determine person abilities is?
A. Maximum performance test
B. Typical performance test
C. Norm performance test
D. Criterion performance test
Answer is = A
In norm referenced test the comparison is between?
A. Groups
B. Individuals
C. Areas
D. Interest
Answer is = B
In which question marking will be more reliable?
A. Completion
B. Short answer
C. Multiple choice question
D. Essay
Answer is = C
Facility value of less than 0.20 means?
A. Item is too easy
B. Item is difficult
C. Item is acceptable
D. Item is easy
Answer is = B

Objective type question have advantage over essay type because such questions?
A. Are easy to prepare
B. Are eay to solve
C. Are easy to mark
D. None
Answer is = C
Discrimination value of more than 0.4 means
A. Item is good
B. Item is acceptable
C. Item is weak
D. None
Answer is = B
Test involving the construction of certain patterns are called?
A. Intelligence test
B. Performance tests
C. Scholastic test
D. None
Answer is = B
In multiple choice items the stem of the items should be?
A. Large
B. Small
C. Meaningful
D. None
Answer is = C
Which appropriate verb will you use to make an objective behavioral?
A. To know
B. To appreciate
C. To understand
D. To construct
Answer is = D
Objectives representing the purposes of instruction of a teacher are called?
A. Performance
B. Instructional
C. Attainment
D. None
Answer is = B
Running description of active behavior of a student as observed by the teacher is?
A. Anecdotal record
B. Autobiography

C. Interview
D. None
Answer is = A
A test very popular with class room teacher is?
A. True false test
B. Multiple choices
C. Matching
D. Completion test
Answer is = B
Frequently used tools of summative evaluation are?
A. Test
B. Teacher observation
C. Daily assignment
D. None
Answer is = A
The most commonly used guessing correction formula to predict and control is?
A. S=R-W
B. S=R-W/N-1
C. S=R-w/2-1
D. None
Answer is = B
The summative evaluation is?
A. Diagnostic
B. Cerifying judgment
C. Continous
D. None
Answer is = B
The difference between maximum and minimum values is?
A. Mean
B. Mode
C. Range
D. None
Answer is = C
The number of score lying in a class interval is?
A. Mid oint
B. Quartiles
C. Class
D. Frequencies
Answer is = D

A multiple choice question is composec of question referred as?
A. Stem
B. Distracter
C. Foil
D. Response
Answer is = A
In a norm referenced test which item is best?
A. Item difficulty is near zero
B. Item difficulty is near 100
C. Item difficulty is near 70
D. Item difficulty is near 50
Answer is = D
Which question has increasing objectivity of marking?
A. Unstructured essay
B. Structured essay
C. Short answer
D. Multiple type questions
Answer is = D
The most widely used format on standardized test in USA is?
A. Unstructured essay
B. Structured essay
C. Short answer
D. Multiple type questions
Answer is = D
Which questions are difficult to mark with reliability?
A. Unstructured essay
B. Structured essay
C. Short answer
D. Multiple type questions
Answer is = A
Projective techniques are used to measure?
A. Aptitude
B. Intelligence
C. Knowledge
D. Personality
Answer is = D
Test meant for prediction on a certain criterion are called?
A. Aptitude test
B. Intelligence

C. Knowledge
D. Personality
Answer is = A
Kuder Richardson method is used to estimate?
A. Reliability
B. Validity
C. Objectivity
D. Usability
Answer is = A
Value that divides the data into two equal parts is?
A. Mean
B. Median
C. Mode
D. None
Answer is = B
The test measures what we intend to measure. This quality of the test is called?
A. Reliability
B. Validity
C. Objectivity
D. Usability
Answer is = B
The length of a test is an important factor in obtaining a representative?
A. Mean
B. Median
C. Mode
D. Sample
Answer is = D
Meidan of 1,2,4,5,2,3, is ?
A. 2
B. 5
C. 3.5
D. None
Answer is = C
The test made to compare the performance of student with the other students is called?
A. Criterion reference
B. Norm reference
C. Achievement
D. None
Answer is = B

The summative evaluation is used?
A. At the end of the program
B. At the middle of the program
C. At the start of the program
D. None
Answer is = A
The appearance of normal curve resembles with?
A. U
B. Bell
C. V
D. None
Answer is = B
The alternative name of the “table of spectification” is?
A. Test Blue Print
B. Test Construction
C. Test Administration
D. Test Scoring
Answer is = A
”table of specification” helps in?
A. Test development
B. Test Construction
C. Test Administration
D. Test Scoring
Answer is = A
The supply type test item is?
A. True / False items
B. Matching items
C. M.C.Q items
D. Completion items
Answer is = D
Alternative response item is?
A. True / False items
B. Right / wrong
C. Correct / incorrect
D. All above
Answer is = D
How many columns matching items have?
A. One
B. Two

C. Four
D. Five
Answer is = B
The item in the column for which a match is sought is?
A. Premise
B. Response
C. Destructor
D. None
Answer is = A
Identifying relationship between two things is demonstrated by?
A. True / False items
B. Matching items
C. M.C.Q items
D. Completion items
Answer is = B
The statement of problem in M.C .Qs is?
A. Premise
B. Response
C. Stem
D. None
Answer is = C
The correct option in M.C.Q is?
A. Answer
B. Premise
C. Response
D. Destructor
Answer is = A
The incorrect options in M.C.Q are?
A. Answer
B. Premise
C. Response
D. Destructor
Answer is = D
The most widely applicable test item is?
A. True / False items
B. Matching items
C. M.C.Q items
D. Completion items
Answer is = C

The type of essay item in which contents are limited is?
A. Restricted Response Questions
B. Extended Response Questions
C. Matching items
D. M.C.Q items
Answer is = A
The ability to select organize, integrate and evaluate ideas is demonstrated by?
A. Restricted Response Questions
B. Extended Response Questions
C. Matching items
D. M.C.Q items
Answer is = B
The Analysis of items is necessary in?
A. Standardized Test
B. Essay Type Test
C. Objective type test
D. Norm referenced test
Answer is = A
Which one is not the type of test of test by purpose?
A. Standardized Test
B. Essay Type Test
C. Objective type test
D. Norm referenced test
Answer is = B
The type of the test by method is?
A. Standardized Test
B. Essay Type Test
C. Objective type test
D. Norm referenced test
Answer is = C
Student’s performance is compared with other students in?
A. Standardized Test
B. Essay Type Test
C. Objective type test
D. Norm referenced test
Answer is = D
Student performance is compared with clearly defined learning tasks in?
A. Standardized Test
B. Essay Type Test

C. Criterion reverenced test
D. Norm referenced test
Answer is = C
Test that measure learning outcome of students is
A. Achievement test
B. Aptitude test
C. Criterion reverenced test
D. Norm referenced test
Answer is =A
The tests designed to predict future performance is?
A. Achievement test
B. Aptitude test
C. Criterion reverenced test
D. Norm referenced test
Answer is =B
The founder of modern intelligent tests was?
A. Alfred Binet
B. Stern
C. Gulford
D. None
Answer is = A
The formula to determine I.Q was presented by?
A. Alfred Binet
B. Stern
C. Gulford
D. None
Answer is = B
I.Q of a student having same physical and mental age will be?
A. 100
B. 120
C. 50
D. 140
Answer is = A
The I.Q of a student having twelve years mental age and tem years physical age will be?
A. 100
B. 120
C. 50
D. 140
Answer is = B

The quality of test that measures “what it claims to measure” is?
A. Validity
B. Differentiability
C. Objectivity
D. Reliability
Answer is = A
The characteristic of a test to siscriminate between high achievers and low achievers is?
A. Validity
B. Differentiability
C. Objectivity
D. Reliability
Answer is = B
If the scoring of the test is not effected by any factor, quality of test is called?
A. Validity
B. Differentiability
C. Objectivity
D. Reliability
Answer is = C
The quality of test to give same scores when administered at different occasions is?
A. Validity
B. Differentiability
C. Objectivity
D. Reliability
Answer is = D
If the sample of the question in the test is sufficiently large enough, the quality of test is?
A. Adequacy
B. Differentiability
C. Objectivity
D. Reliability
Answer is = A
The quality of test showing ease of time, cost, administration and interpretation is called?
A. Usability
B. Differentiability
C. Objectivity
D. Reliability
Answer is = A
Facility index of an item determines?
A. Ease or difficulty
B. Discrimination power

C. Objectivity
D. Reliability
Answer is = A
High and low achievers are sorted out by?
A. Ease or difficulty
B. Discrimination power
C. Objectivity
D. Reliability
Answer is = B
Test item is acceptable which its faculty index /difficulty level ranges from?
A. 30-70 %
B. 70 %
C. 30%
D. None
Answer is =A
Test item is very easy when value of faculty index/ difficulty level is higher than?
A. 30-70 %
B. 70 %
C. 30%
D. None
Answer is =B
Test item is very difficult when value of facility index/ difficulty level is less than?
A. 30-70 %
B. 70 %
C. 30%
D. None
Answer is =C
Discrimination power of an item is acceptable when its value ranges from?
A. 0.30 – 1
B. 1
C. 0.30
D. None
Answer is = A
Test item discriminates 100% when its value for discrimination is?
A. 0.30 – 1
B. 1
C. 0.30
D. None
Answer is = B

Test item cannot discriminate low achievers and high achievers when its value is lower than?

A. 0.30 – 1

B. 1

C. 0.30

D. None

Answer is = C

Quiz# 2

1. A list of three or more choices from which an examinee is required to choose the correct one is given in

   MCQ items

2. Identify the value of item difficulty for most difficult test item.

   0.7

3. Under Item Response Theory, the difficulty of an item describes where the item functions along the **_ability scale__**.

4. Identify the excellent item from given values of item discrimination.

0.50

5. Identify the value of item difficulty for easiest test item.

0.2

6. The correct option in MCQ is called

Answer

7. Limited numbers of content area is needed to be tested in

Restricted response items

8. Discrimination power of an item is acceptable when its value ranges from?

0.5-1.

9. Identify the value of item difficulty for easiest test item.

0.1

10. The ability to select organize, integrate and evaluate ideas is demonstrated by

Extended Response Questions

11. The pattern of student's errors and misconceptions start emerging after reading a few papers that help to develop scoring rubric for extended response items which will applied to score all papers.

Analytic scoring

12. MCQs can Not be used to assess the knowledge of

Illusions

13. Identify the acceptable item from given values of item discrimination.

0.26

14. Feature, trait or dimension to be measured is decided in the _**criteria**_ element of rubric.

15. Discrimination power of an item is acceptable when its value ranges from?

0.2-1.00

16. Good distractor is that

Attracts equally low and high achievers

17. Identify the value of item difficulty for most difficult test item.

0.2

18. Identify the poor item from given values of item discrimination

0.15

19. Identify the value of item difficulty for most difficult test item.

0.7

20. Identify the value of item difficulty for most difficult test item.

0.8

21. How many columns matching items have

Two

22. The most commonly used guessing correction formula to predict and control is

S=R-W/N-1

23. Descriptors are __**detailed description for each level of performance**__.

24. A test very popular with class room teacher is ____M**CQ test**___.

25. Guessing parameter can be measured in

IRT

26. When you are ready to package and reproduce the test _____

Objectives and test blue print

27. There are __**two**__ main types of rubric
28. The correction option in MCQ is called __**Distractor**__.

29. Item analysis focuses to find out __All above__.

30. 40 words per minute **Criterion Referenced interpretation.**

31. A rubric is a **used for assessing a particular type of work or performance.**

Bad distractor is that: **Attracts high achievers more than lower achievers**.

MCQs cannot be used to assess the knowledge of

Illusions

Objective type question have advantage over essay because

Easy to mark

The problem stated in the form of question or incomplete statement in MCQs is

Stem

Identify the poor item from given values of item discrimination

0.15

Which of the following are major threats to the validity of test score interpretations

Teacher's behavior

Identify the item difficulty **0.3**

Identify the excellent item from given values of item discrimination

0.48'

Difficulty level of an item determines

All above

A MCQ is composed of statement referred as
Stem

Holistic rubric are good for evaluating

Overall performance

Good item

0.31''

Most difficult test item

Lowest 0.1

An item in column for which a match is sought

Premise

Most difficult

0.2

Limited number of content area is needed to be tested in

Restricted response items

A steeper item characteristics curve shows that item is

Good discriminator

Test item cannot discriminate low achievers and high achievers when value lower than

0.3

Example of supply response item

Short answer

Not basic step to design rubric

Give hints to a student directly

Schools professional practices

Material kept in a locked storage

Identifying relationship between two thing

Matching items

True-false items are also known as

Alternative form items

Advantages of holistic rubric involves

All above

MCq cannot be used to measure the knowledge of

Illusions

To give an answer or make a judgement about something without being sure of all facts

Guess

Extended response items are helpful to determine

Length and complexity of response

- D: >0.4 – excellent

Topic 110: Item Characteristic Curve (ICC) in Item Response Theory

In this session student will learn:

1. Item Characteristic Curve (ICC)in Item Response Theory

Item Characteristic Curve (ICC) in IRT

To analyze items using IRT, the main thing need to consider is item characteristic curve (ICC).

The item characteristic curve is considered as the basic building block of item response theory;

Methodological properties of an ICC

1. The difficulty which under item response theory describes the item functions along the ability scale. For example an easy item functions among the low-ability examinees and a hard item functions among the high-ability examinees
2. The second property is discrimination, which describes how well an item can differentiate between examinees having abilities below the *item location* and those having abilities above the item location
3. An item characteristic curve is the graphical representation of the probability of answering an item correctly with the level of ability on the construct being measured.

Item Characteristic Curve (ICC) in IRT

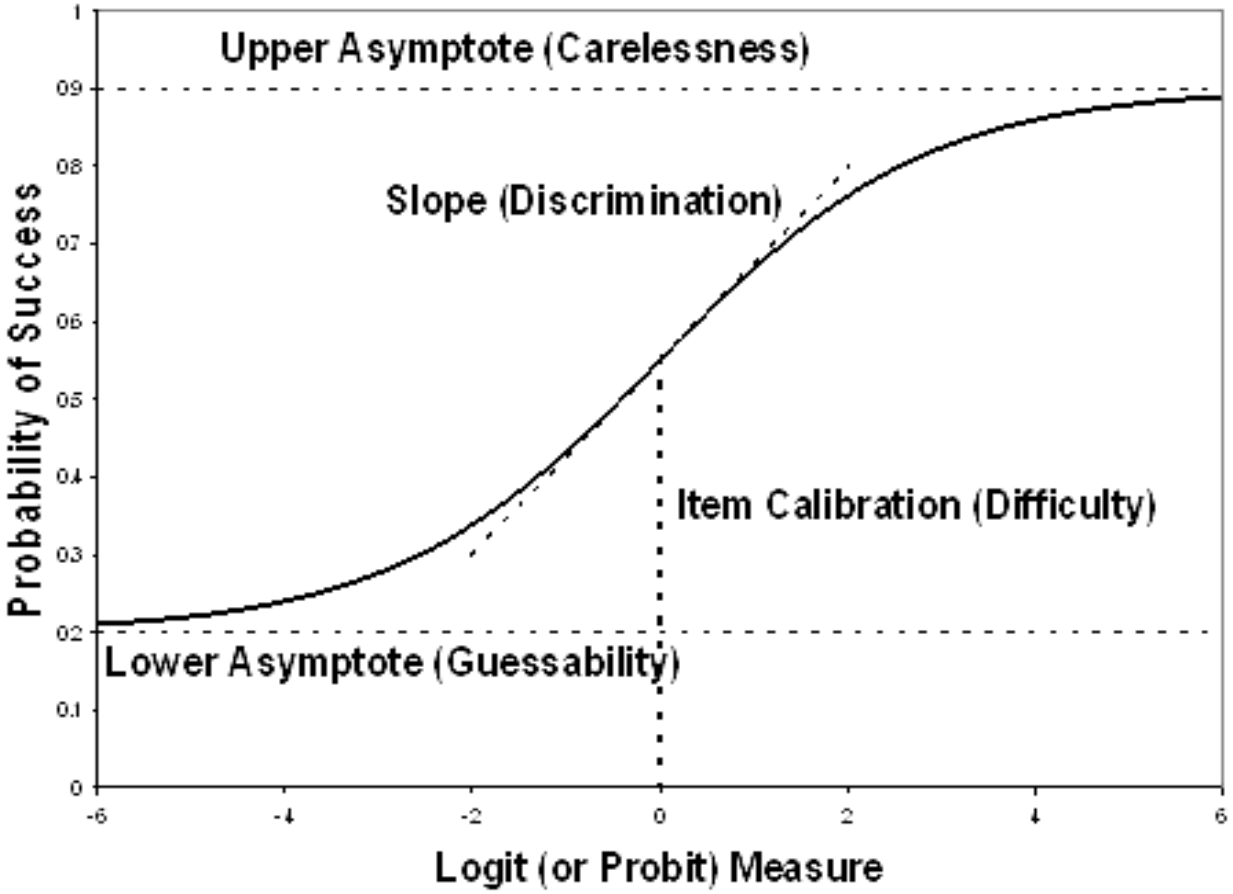

It gives a picture of:

- The item difficulty
- Discrimination power
- The probability of answering correctly by guessing

© Copyright Virtual University of Pakistan

As the item difficulties are defined in relation to ability levels, on the same scale. If we know person ability then we can predict how that person is likely to perform on an item, without administering the item to the person.

A typical item characteristic curve (ICC)

Topic 111: Item Difficulty in Item Response Theory

In this session student will learn:

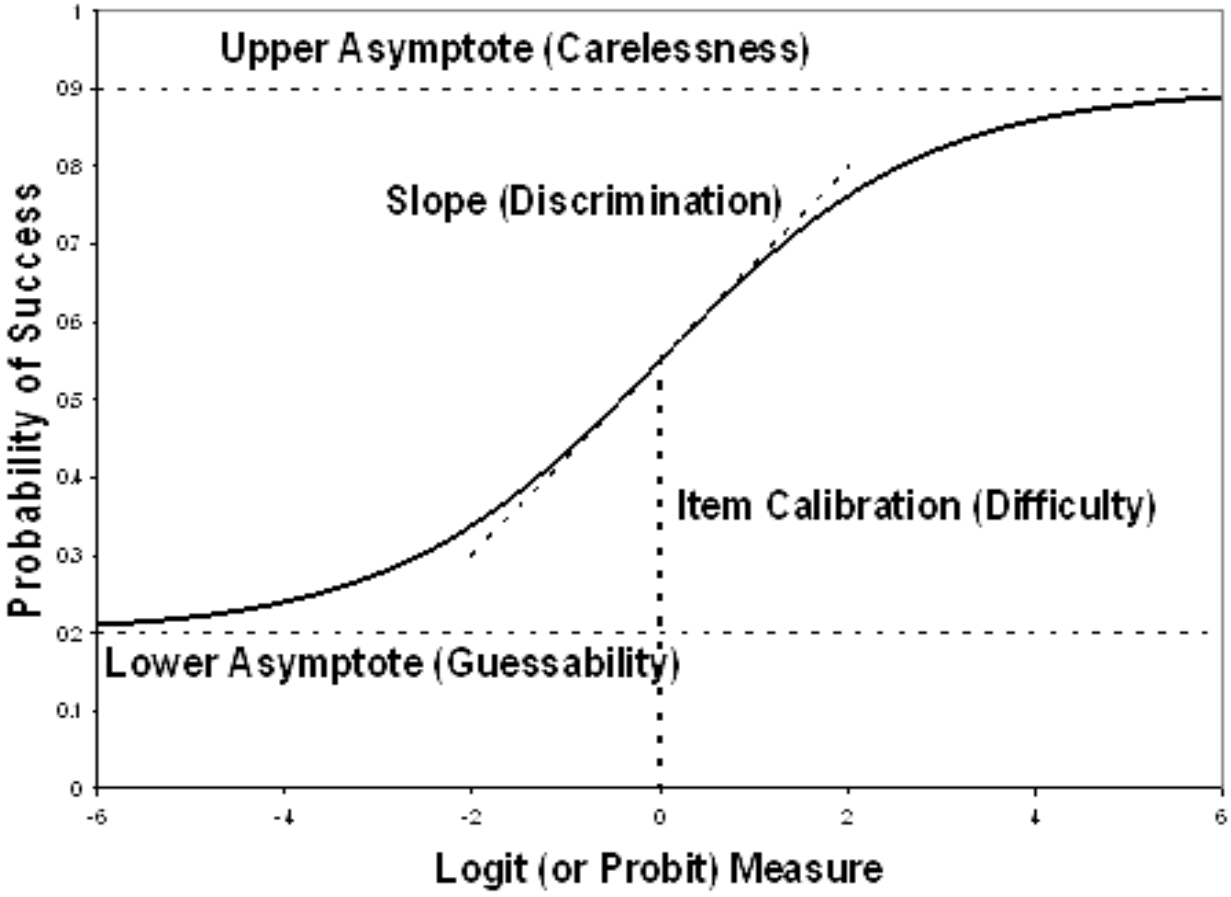

1. Item Difficulty in Item Response Theory

Item Difficulty in Item Response Theory

The application of Item difficulty in IRT is defined as the ability at which the probability of success on the item is .5 on a logit scale, which is also known as threshold difficulty.

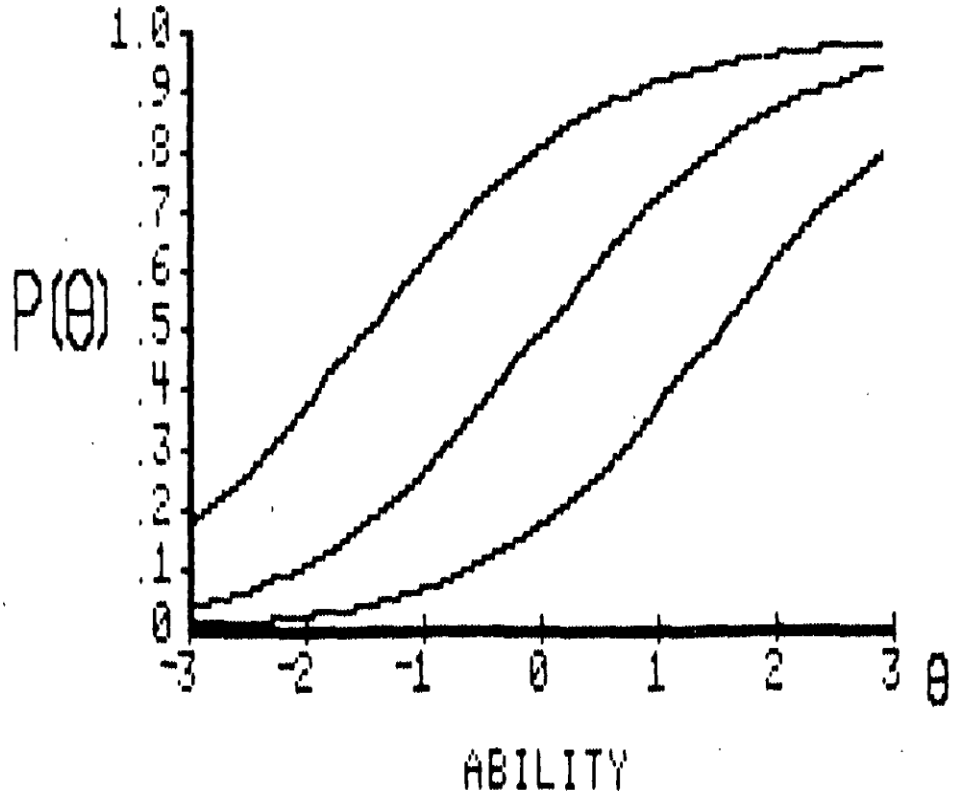

An item that has a high level of difficulty will be less likely to be answered correctly by an examinee with low ability than an item that has a low level of difficulty (i.e., an easy item).

A typical item characteristic curve (ICC)

Three item characteristic curves are presented on the same graph. All have the same level of discrimination but differ with respect to difficulty.

Three item characteristic curves are presented on the same graph. All have the same level of discrimination but differ with respect to difficulty.

The left-hand curve represents an easy item because the probability of correct response is high for low-ability examinees and approaches 1 for high-ability examinees..

The center curve represents an item of medium difficulty because the probability of correct response is low at the lowest ability levels, around 0.5 in the middle of the ability scale and near 1 at the highest ability levels.

The right-hand curve represents a hard item. The probability of correct response is low for most of the ability scale and increases only when the higher ability levels are reached.

© Copyright Virtual University of Pakistan

Even at the highest ability level shown (+3), the probability of correct response is only 0.8 for the most difficult item.

Topic 112: Item Discrimination in Item Response Theory (IRT)

In this session student will learn:

1. Item Discrimination in Item Response Theory (IRT)

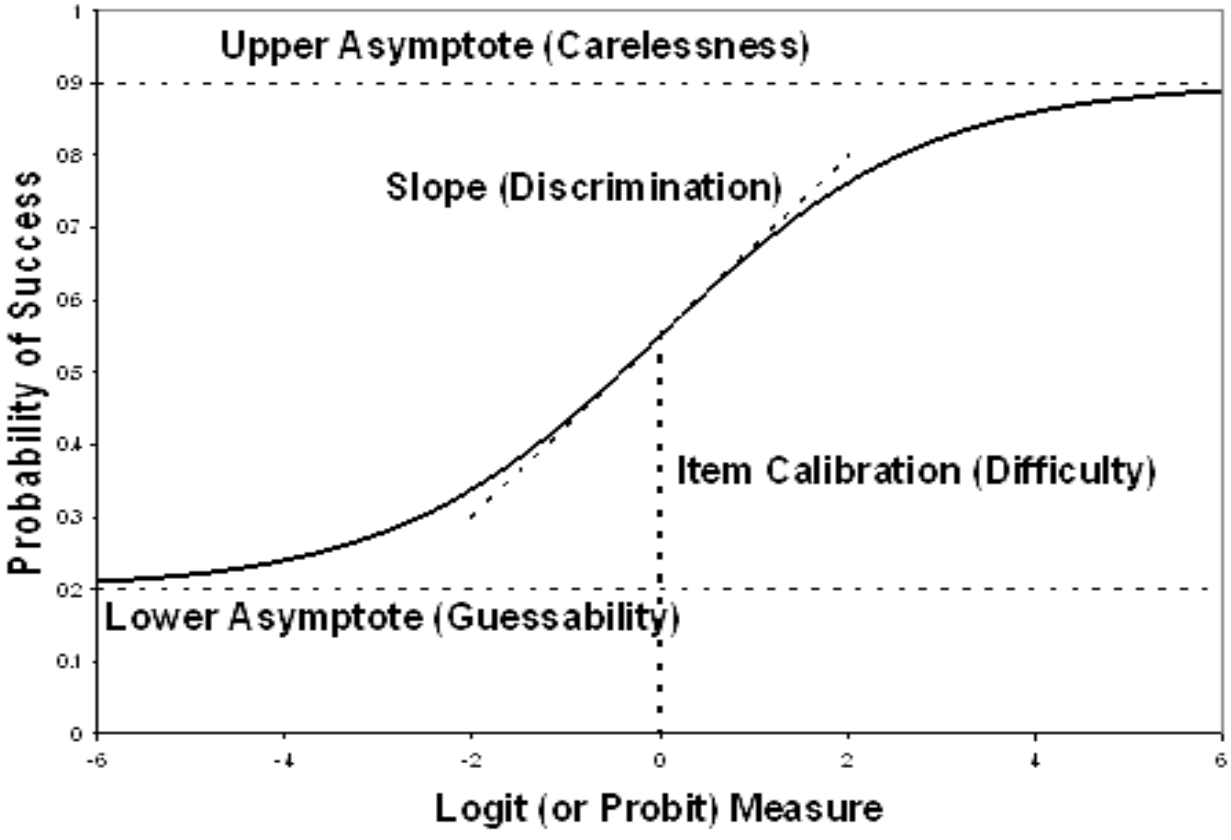

Item Discrimination in Item Response Theory (IRT)

The items on a test might also differ in terms of the degree to which they can differentiate individuals who have high trait levels from individuals who have low trait levels.

This property is reflected in the steepness of the item.

The steeper the curve, the better it discriminates.

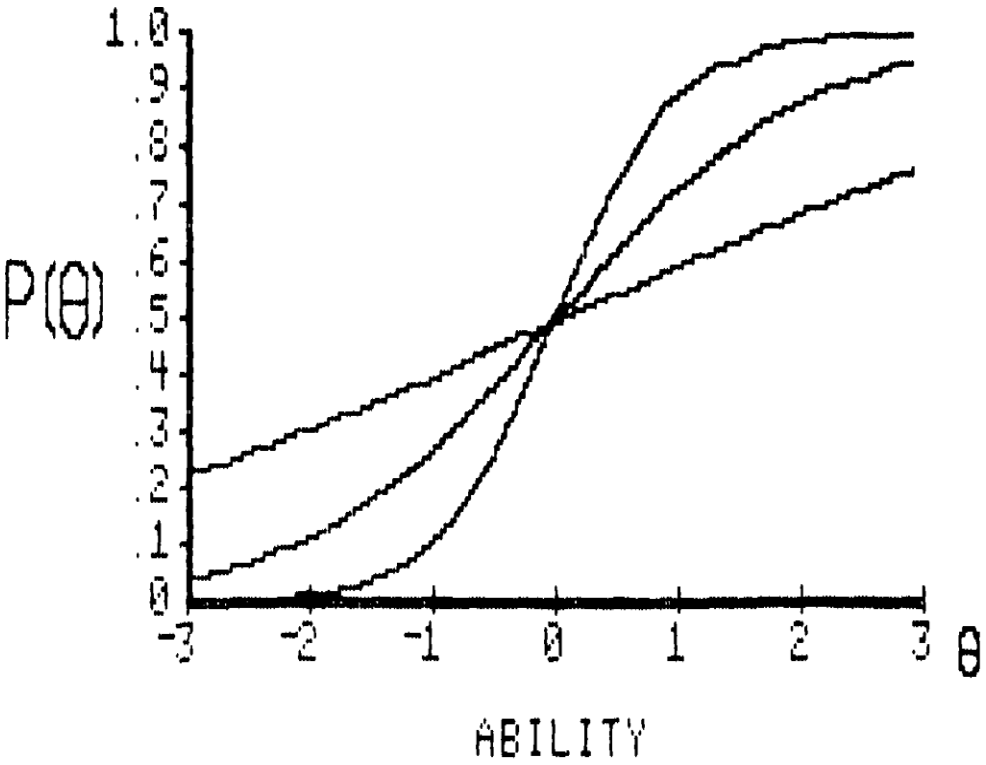

A typical item characteristic curve (ICC)

© Copyright Virtual University of Pakistan

Items with steep ICC are more discriminating as compare to relatively flatter curves.

The figure contains three item characteristic curves having the same difficulty level but differing with respect to discrimination.

The upper curve has a high level of discrimination since the curve is quite steep in the middle where the probability of correct response changes very rapidly as ability increases.

The figure contains three item characteristic curves having the same difficulty level but differing with respect to discrimination.

The middle curve represents an item with a moderate level of discrimination. The slope of this curve is much less than the previous curve and the probability of correct response changes less dramatically as the ability level increases.

The figure contains three item characteristic curves having the same difficulty level but differing with respect to discrimination.

© Copyright Virtual University of Pakistan

The probability of correct response is near zero for the lowest-ability examinees and near 1 for the highest ability examinees. The third curve represents an item with low discrimination.

The figure contains three item characteristic curves having the same difficulty level but differing with respect to discrimination.

The third curve represents an item with low discrimination. The curve has a very small slope and the probability of correct response changes slowly over the full range of abilities shown.

Topic 113: Probability of Guessing in Item Response Theory (IRT)

In this session student will learn:

1. Probability of Guessing in Item Response Theory

Probability of Guessing in Item Response Theory

Guessing means giving an answer or making a judgment about something without being sure of all the facts.

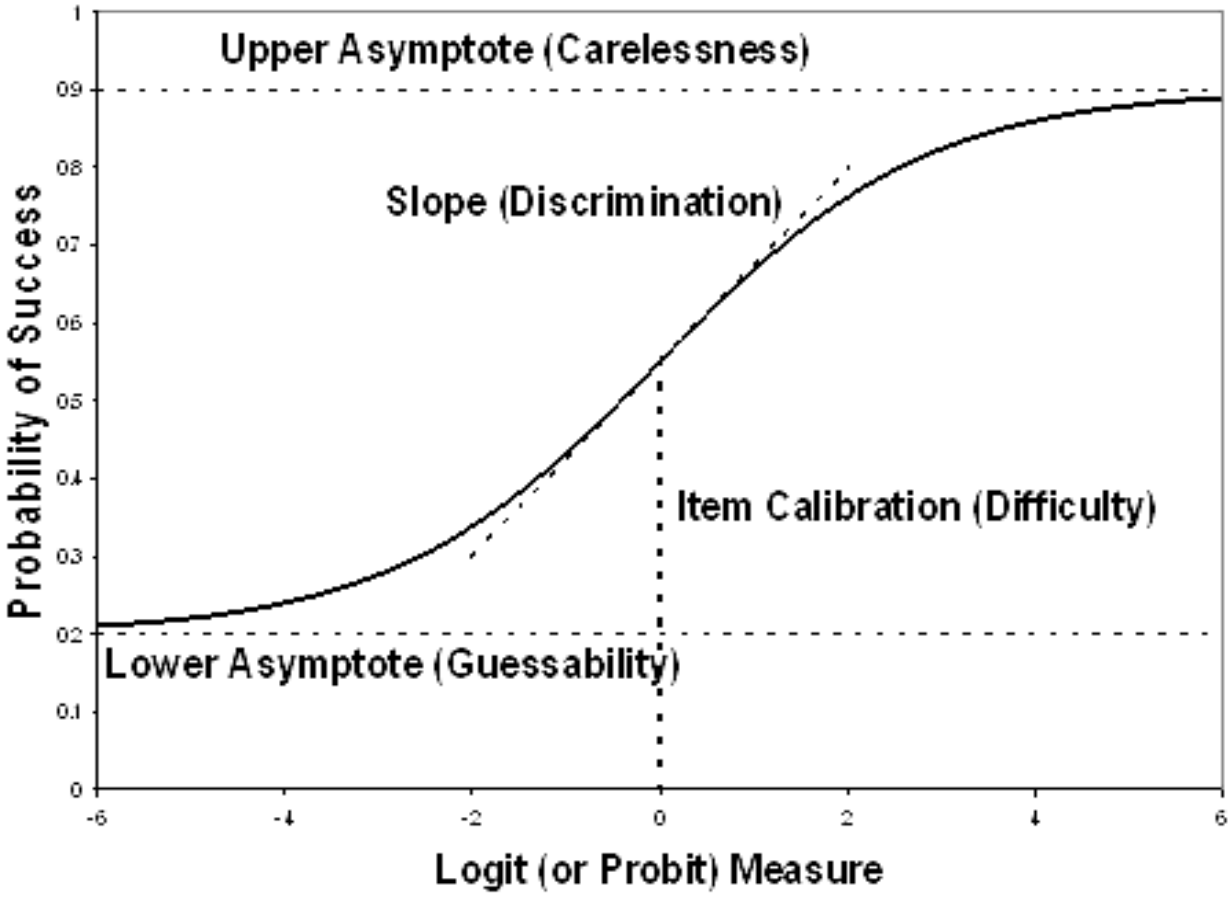

Guessing is a standard test-taking strategy presented to examinees taking a multiple choice assessment.

If test scores are based simply on the number of questions answered correctly, then a random guess increases the chance of a higher score.

In IRT this parameter of an item is also known as G (guessing) parameter which allow to detect the potential possibility of guessing in an item

A typical item characteristic curve (ICC)

© Copyright Virtual University of Pakistan

Examinees guess because they do not have adequate knowledge or ability to provide correct answer

There are two types of guessing

- Blind guessing
- Informed guessing

Blind guessing:

Where an examinee chooses an answer at random among the alternatives offered.

Informed guessing:

Where the examinee draws upon all his knowledge and abilities to choose the answer most likely to be correct.

© Copyright Virtual University of Pakistan

Item writers should be conscious of guessing and not write item that could be prone to guessing.

IRT method of item analysis should be employed to eliminate those items prone to guessing

© Copyright Virtual University of Pakistan

Lecture 13: Administering Test

Topic 114: Concept and importance of assembling and administration of tests

In this session student will learn:

1. Concept and Importance of Assembling and Administering Test

We have spent a lot of time in learning writing instructional objectives, table of specification, selection of questions format, writing questions, aligning questions and objectives to ensure GOOD TEST.

But imagine after all this hard work, if care is not taken while assembling all good work to a test actually presented to students or test administration is not done the way it should be then whole hard work will be wasted.

Issues in test administration

1. Cheating
2. Poor testing conditions
3. Test anxiety
4. Errors in test scoring procedure.

What to do?

It is equally important to control all the factors other than test itself, to collect trustable evidence of student learning by addressing test administration issues.

The way in which the test is administered is very important to meet the goal of producing highly valid, reliable results.

Once a test is ready then next step is to administer it.

Teacher has to help the students psychologically by maintaining a positive test-taking attitude, clarifying the rules, penalties for cheating, reminding them to check their copies, minimizing distractions and giving time warnings.

© Copyright Virtual University of Pakistan

Cheating, poor testing conditions, and test anxiety, as well as errors in test scoring procedures contribute to invalid test results.

Accurate achievement data are very important for planning curriculum and instruction.

Test scores that overestimate or underestimate students' actual knowledge and skills cannot serve these important purposes.

So it is worth a little more time to properly assemble and administer a test.

Topic 115: Assembling Test: Recording items

In this session student will learn:

1. Recording items

The preparation of test items is greatly facilitated if the items are properly recorded.

Recording test items

The card contain information concerning the instructional objectives, specific objective, difficulty index, discrimination index and the content measured by the item should be prepared for each item to maintain its record.

Topic 116: Assembling Test: Packing the test

In this session student will learn:

1. Packing the test

Once you have measureable instructional objectives, test blueprint, written test items matching instructional objectives, so you are ready to

- package the test and
- reproduce the test

Assembling Test (Packaging the Test)

Packing of test involves:

© Copyright Virtual University of Pakistan

1. Grouping together items of similar format
2. Arranging test items from easy to hard
3. Properly spacing items
4. Keeping items and options on the same page
5. Position illustration near description (if diagram given)
6. Randomness of answer key
7. Determine how students record answers (separate sheet or same sheet)
8. Providing space for test taker's details
9. Proofread the test (typographical and grammatical error)
10. Test directions

1. Grouping together items of similar format

Makes easy to understand

Save response time

Once set of instruction per format is enough

2. Arranging test items from easy to hard

Increases the possibility of good start for poor starters

Build confidence

Motivates

Reduces test anxiety

Topic 117: Assembling Test: Packing the test (Continue 1)

In this session student will learn:

1. Packing the test

Following are some more points.

3. Space the item for easy reading

Enough space between lines and questions

Suitable answer space

Standard font type and size

4. Keeping items and options on the same page

Minimizes the likelihood of misprint

Saves respondent from unnecessary hassle

Save test time.

5. Position illustration near description (if diagram given)

Put all related questions on same page

Diagram above the question

Topic 118: Assembling Test: Packing the test (Continue 2)

In this session student will learn:

1. Packing the test

Following are some more points.

6. Randomness of answer key

Check key, equal distribution of correct answer, use all options equally

Avoid guessing

Avoid confusion

7. Determine how students record answers (separate sheet or same sheet)

Brings uniformity attempt with clarity

Prepares for standardized tests

8. Providing space for test taker's details

© Copyright Virtual University of Pakistan

Identification ensured

Makes easy to combine different parts of test (if applicable)

Topic 119: Assembling Test: Packing the test (Continue 3)

In this session student will learn:

1. Packing the test

Following are some more points.

9. Proofread the test (typographical and grammatical error)

Save time during test

Avoid clues/confusion

Increase confidence in test

10. Test directions

Conveys expectation

Help in time management

Conveys scoring policy and priorities

Topic 120: Assembling Test: Reproducing the test

In this session student will learn:

1. Reproducing the test

In schools it is usually by photocopying and quality of test copies may vary considerably.

Reproducing the Test

Reproduction of test involves:

1. Knowing the photocopying machine
2. Specifying copying instructions

© Copyright Virtual University of Pakistan

3. Filing original test

1. Knowing the photocopying machine
   - Expert operator
   - Toner quality
   - Atomization facility in machine
   - Ensure uniformity of legibility, shades etc.
2. Specifying copying instructions
   - Randomly checking of every 19th copy
   - Paper size
   - Margins
   - Ordering of pages
   - Stapling
   - Packing

3. Filing original test
   - Master copy for reference and reuse
   - Use as reference in random checking
   - Keep with you during test

Topic 121: Assembling Test: Things to remember when administering test

In this session student will learn:

1. Things to remember when administering test

Test is ready, get students ready.

1. Maintain a positive attitude
2. Maximize achievement motivation
3. Equalize advantages
4. Avoid surprises
5. Clarity the rules
6. Rotate distribution

© Copyright Virtual University of Pakistan

7. Remind students to check their copies
8. Monitor students
9. Minimize distributions
10. Give time warning
11. Collect test uniformly

Maintain a positive attitude

1. Assure test is from taught
2. Students convenience and limitations addressed
3. Guide to reduce anxiety
4. Eliminate non-actors affecting achievement

Maximize achievement motivation

1. Encourage to do best, mitigate the fear
2. Highlight value of giving best
3. Reduce panic
4. Encourage serious thinking

Topic 122: Assembling Test: Things to remember when administering test (Continue 1)

In this session student will learn:

1. Things to remember when administering test

Equalize advantages (test-wise)

1. Discourage guessing
2. Discourage no answer
3. Discourage multiple answers
4. Instructions like, don't spend more time on difficult items, do easy questions first, must read after completing, etc.

Avoid surprises

Advance notice of tests, discuss test structure, and ways of preparing for test

© Copyright Virtual University of Pakistan

1. Brings out stable achievement
2. What students can perform the best

Topic 123: Assembling Test: Things to remember when administering test (Continue 2)

In this session student will learn:

1. Things to remember when administering test

Clarity the rules

1. Time limits
2. Restroom policy
3. Special requirement of students
4. Test distribution
5. Consulting others
6. Borrowing things

Rotate distribution

1. Left to right, right to left
2. Front to back, back to front
3. Multiple person distribution
4. Starting at same time

Remind students to check their copies

1. Order of pages
2. Number of pages
3. Quality of print
4. Replacement if needed before start of test
5. Ensuring recording of name and date

© Copyright Virtual University of Pakistan

Topic 124: Assembling Test: Things to remember when administering test (Continue 3)

In this session student will learn:

1. Things to remember when administering test

Monitor students (test invigilation)

1. Penalties of cheating
2. Disturbing others
3. Seating position/posture
4. Protecting test from others
5. Cheating material handing
6. Jurisdiction of invigilation staff

Minimize distributions

1. Avoid noise
2. Avoid instruction after start of test
3. Avoid in-out movement
4. No talk between invigilation staff- silence

Time warning and test collection

1. Half time
2. 2/3 time
3. 30, 15 and 5 min reminder
4. Use minimum words to announce time warning
5. Give time to close
6. Announce “stop writing”
7. Collecting test in reverse order of distribution

© Copyright Virtual University of Pakistan

Lecture 14: Scoring Test

Topic 125: Scoring Criteria: Scoring Rubric

In this session student will learn:

1. Scoring criteria
2. Scoring rubric

Scoring Criteria

Planning how responses will be scored leads to rethinking and clarifying the questions so that students have a clearer idea of what is expected.

Clear specification of scoring criteria in advance of administering essay questions can contribute to improved reliability and validity of the assessment.

Scoring Rubric

A rubric is an explicit set of criteria used for assessing a particular type of work or performance and provides more details than a single grade or mark. Scores levels identified in a scoring rubric must be descriptive, not merely judgmental in nature.

Example: Define the level of rubric as "Writing is clear and thoughts are complete" as compared to "excellent".

Topic 126: Scoring Rubric for Essay Type Questions

In this session student will learn:

1. Scoring Rubric for Essay Type Questions Scoring rubric

Scoring Rubric for Essay Type Questions

Scoring of essay items is a time consuming and difficult process. Reliability of the test demands that scoring should be consistent not only by the rater at different items but by two independent raters as well.

Judgments concerning the quality of a given writing sample may vary depending upon the criteria established by the individual evaluator.

© Copyright Virtual University of Pakistan

Writing samples are just one example of performance that may be evaluated using scoring rubric.

Scoring rubric have also been used to evaluate group activities, extended projects and oral presentations.

Basic Steps to design Rubric

1. Identify a learning goal.
2. Choose outcomes that may be measured.
3. Develop or adapt existing rubric.
4. Share it with students.

.

Topic 127: Elements of Rubric

In this session student will learn:

1. Elements of Rubric

Elements of Rubric

A rubric includes:

1. Score
2. Criteria
3. Level of performance
4. Descriptors

Score

A system of number or values assigned to a work often combines with a level of performance.

High numbers are for best performance like 4, 5 or 6 whereas down to 1 or 0 are the lowest score in a performance assessment.

© Copyright Virtual University of Pakistan

Criteria

It tells us that which feature, trait or dimension to be measured and include a definition and example to make clear the meaning of each trait to be assessed.

Level of Performance

There are adjectives to describe the performance levels. These levels tell students what they are expected to do.

Descriptors can be used with levels of performance to achieve objectivity but they can be used without them as well.

Descriptors

These are details for each level of performance to reliable and unbiased scoring.

Topic 128: Holistic Scoring Rubric

In this session student will learn:

2. Holistic Rubric
3. Holistic rubric for essay type questions

Holistic Scoring Rubric

These rubrics are good for evaluating overall performance on a task. All criteria are assessed as a single score. As only one score is given so holistic rubrics are easy to score.

When to use:

1. There is no correct answer/response to ask a task e.g. creative work.
2. Focus is on overall quality, proficiency or understanding of a specific content or skill.
3. The assessment is summative e.g. at the end of the semester or major.
4. Assessing significant numbers e.g. 150 student portfolio.

© Copyright Virtual University of Pakistan

Holistic Rubric for Essay Type Questions

Holistic rubric is probably more appropriate for extended response essay type items involving a student's abilities to synthesize and create and when no definite answer can be pre-specified.

Topic 129: Approaches to Apply Holistic Scoring Rubric

In this session student will learn:

1. Approaches to Apply Holistic Scoring Rubric

Approaches to Apply Holistic Scoring Rubric

One way to implement holistic rubric is to decide beforehand on the number of quality categories into which you will sort the student's answers.

A second better way of using the holistic method is to craft a holistic rubric, which defines the qualities of paper that belong in each category. For example, defining what an "A" paper is a "B" paper is and so on.

A third refinement is to select specimen papers, which are good examples of each scoring category. Then you can compare the student's paper with the pre-specified specimens that define each category level.

A fourth way of implementing holistic rubric is to read the answer completely and one with an-other to decide which are the best. The next best and so on.

This will result in the rough ranking of all the papers this approach of holistic rubric cannot be applicable to a large number of papers.

Among these four approaches first three are consistent with a grading philosophy of criterion referenced or absolute quality standards

While the fourth one is consistent with the norm reference or relative standard grading philosophy

© Copyright Virtual University of Pakistan

Holistic Scoring Rubric

	Levels of Rubric
Q1. Critically evaluate the various approaches to research by Identifying sound and unsound reasoning in scientific and lay contexts.	**4. Outstanding** Discerning in judging the validity of findings as warranted or not by evidence and research design. Can articulate the basic implications of identified strengths and weaknesses of methods. **3. Effective** Can differentiate sound from flawed research methods and evaluate the validity of inferences based on available evidence. **2. Adequate** Recognizes major flaws in research. Critical judgment exercised only when pressed, elicited, or when prior (closely held) assumptions are challenged. **1. Ineffective** Unable to recognize inappropriate research methods or invalid inferences from evidence. Likely to accept results more on basis of preconceived notions, prejudice or style of presentation than on the basis of a critical assessment of the evidence, concepts, and methods.

Score	Description
5	Demonstrates complete understanding of the problem. All requirements of task are included in response.
4	Demonstrates considerable understanding of the problem. All requirements of task are included.
3	Demonstrates partial understanding of the problem. Most requirements of task are included.
2	Demonstrates little understanding of the problem. Many requirements of task are missing.
1	Demonstrates no understanding of the problem.
0	No response/task not attempted.

© Copyright Virtual University of Pakistan

Advantages

1. Quick scoring
2. Provides overview of student achievement

Disadvantages

1. Does not provide detailed information.
2. May be difficult to provide one overall score.

Topic 130: Analytic Scoring Rubric

In this session student will learn:

1. Analytic Scoring Rubric
2. Analytic rubric for essay type questions

Analytic Scoring Rubric

Each criterion is assessed separately by using different descriptive ratings. Each criterion is given a separate score.

Final score is made up of adding each component parts. It takes more time to score but gives detailed more feedback.

When to use:

1. Several faculty are collectively assessing student work.
2. Outside audience will be examining rubric scores.
3. Profiles of specific strength/weakness are desired.

Analytic Rubric for Essay Type Questions

Analytic scoring requires a list of major elements that students are expected to include in an ideal answer of a question.

© Copyright Virtual University of Pakistan

Next, to decide the number of points award to students when they include each element.

Analytic rubric is used to score an essay type of question on different points and significantly it works best on the restricted response type essay question.

In developing analytic rubric identify the certain elements of the answer which are more appropriate to the learning objectives of a course.

When assigning number to each element, be sure the total points should match with the essay's total value in relation to the overall number of points on test.

Student will get a partial credit award gives on a partially correct answer but partial credits can increase the inconsistency in scoring and decrease the reliability of scoring process.

Crafting a partial credit scoring may be difficult after reading a few papers. The pattern of students' errors and misconceptions are emerged then craft a partial credit scoring rubric and use it to score all papers.

	Elements of questions	Scoring key
Q1.	(a) What is meiosis and mitoses?	2 points
	(b) Compare these two.	
	Write four similarities.	4 points
	Write four differences.	4points

Criterion	Beginning 1	Developing 2	Accomplished 3	Exemplary 4	Score
#1	**Description reflecting beginning level of**	**Description reflecting movement towards mastery level of**	**Description reflecting achievement of mastery level**	**Description reflecting highest level of**	

© Copyright Virtual University of Pakistan

	performance	**performance**	**of performance**	**performance**	
#2	**Description reflecting beginning level of performance**	**Description reflecting movement towards mastery level of performance**	**Description reflecting achievement of mastery level of performance**	**Description reflecting highest level of performance**	
#3	**Description reflecting beginning level of performance**	**Description reflecting movement towards mastery level of performance**	**Description reflecting achievement of mastery level of performance**	**Description reflecting highest level of performance**	

Topic 131: Advantages and disadvantages of Analytic Rubric

In this session student will learn:

1. Advantages and disadvantages of Analytic Rubric
2. Suggestion

Advantages

1. More detailed feedback.
2. Scoring more consistent across students and grades.

Disadvantages

1. Time consuming to score.

Suggestions for scoring constructed response questions

© Copyright Virtual University of Pakistan

1. Prepare an outline of the expected answer in advance.
2. Use the scoring rubric that is most appropriate.
3. Decide how to handle factors that are irrelevant to the learning outcomes being measured.
4. Evaluate all responses to one question before going on to the next one.
5. When possible, evaluate the answers without looking at the student's name.
6. If especially important decisions are to be based on the results, obtain two or more independent ratings.

© Copyright Virtual University of Pakistan

Lecture 15: Standardized Testing

Topic 132: Standardized Achievement Test

In this session student will learn:

1. Standardized Achievement Test

Achievement Test

A standardized achievement test a fixed set if items to measure defined achievement domain, specific direction for administrating and scoring test, and norms based on representative groups of individuals.

Most published achievement test are called standardized achievement tests. These typically are norm referenced tests. Quite a few criterion referenced achievement tests are also been published.

Achievement tests are used as part if broader assessment system or alone. They provide relatively inexpensive means of measuring broad achievement goals.

Standardized achievement tests are often customized to include characteristics of both norm and criterion referenced test.

Standard content and procedure makes it possible to give an identical test to individuals in different places at different times.

Equivalent forms are included in many standardized tests, which make it possible to repeat the test without fear that the test takers will remember the answers from first testing.

Topic 133: Characteristics of Standardized Achievement Test

In this session student will learn:

1. Characteristics of Standardized Achievement Test

© Copyright Virtual University of Pakistan

Characteristics of Standardized Achievement Test

1. The test items are of highly technical quality. They have been developed by educational and test specialists, pretested and selected on the basis of difficulty discriminating power, and relationship to a clearly defined and rigid set of specifications.
2. Directions for administering and scoring are so precisely stated that the procedures are standard for different users of test.
3. Norms based on national samples of students in the grade where the test is intended for use are provided as aids in interpreting the test scores.
4. Equivalent and comparable forms of the test are usually provided, information concerning the degree to which the forms are comparable.
5. A test manual is used as guides for administering the test, evaluating its technical qualities, and interpreting and using the results.

Topic 134: Standardized Test versus Informal Classroom Test

In this session student will learn:

1. Standardized Test versus Informal Classroom Test

Standardized Test versus Informal Classroom Test

Standardized tests and carefully constructed test are common in many ways. The main differences between the two types are:

1. The nature of the learning outcomes and the content measured.
2. Quality of test items
3. Reliability of the tests
4. Procedure for administering and scoring
5. Interpretation of scores

The standardized tests inflexibility makes it less valuable for those purposes for which the informal classroom tests is so admirably suited.

1. Evaluating the learning outcomes and content unique to particular class or school

© Copyright Virtual University of Pakistan

2. Evaluating student's day to day progress and their achievement on the work units or varying sizes.
3. Evaluating knowledge of current developments in the rapidly changing content areas such as science and social studies.

Topic 135: Standardized test batteries and guidelines for SAT batteries

In this session student will learn:

1. Standardized test batteries and guidelines for SAT batteries

Standardized test batteries

Standardized achievement tests are frequently used in the form of survey test batteries. A battery consists of a series of individual tests all standardized on same national sample of students. Test batteries include subjects according to educational level of students.

Guidelines for SAT batteries

Achievement test batteries focus on the basic skills measuring important outcomes of the program.

Content oriented test in basic achievement batteries have broad coverage but limited sampling in each content area and may tend to become outdated more quickly.

The selection of battery should be based on its relevance to the schools objectives. Diagnostic batteries should contain a sufficient number of test items for each type of interpretation to be made.

Topic 136: SAT in specific area, separate content oriented test, reading test

In this session student will learn:

1. SAT in specific area, separate content oriented test, reading test

© Copyright Virtual University of Pakistan

SAT in specific area

There are separate tests designed to measure achievement in specific areas. This includes tests of course content, reading tests.

Separate content oriented tests

Attention should be directed on appropriateness for particular course in which it is to be used.

Standardized tests of specific knowledge are seldom as relevant and useful as well constructed teacher made test in same area.

Reading test

Such tests commonly measure

1. Vocabulary
2. Reading comprehension
3. Rate of reading

No two reading tests are exactly alike. They differ in the material that the reader is expected to comprehend, in the specific reading skills tested and in the adequacy with which each skill is measured.

Reading survey test measure only some of the outcomes of reading instruction, the mechanics of reading is measured by diagnostic reading tests.

In addition to matching the objectives of instruction, test selection should also take into account all the possible uses to be made of the results.

Topic 137: Concept of Interpreting Test Scores

In this session student will learn:

1. Concept of Interpreting Test Scores

© Copyright Virtual University of Pakistan

Concept of Interpreting Test Scores

Test scores can be interpreted in the terms of:

1. Types of tasks that can be performed (Criterion referenced or standard based)
2. Relative position held in some reference group (norm reference)

Interpreting test scores

The properties of physical measuring scales lacks in educational measurement. A student who receives a score of zero does not have zero knowledge of that subject.

A true zero point in achievement cannot be usually established.

60 correct items on a simple vocabulary test does not have the same meaning as 60 items correct on more difficult one or any other subject or study skills. However, this arbitrary starting point prevents us from claiming that a zero indicates no achievement at all or 100 represents twice the achievement of a score of 50.

Topic 138: Method of Interpreting Test Scores

In this session student will learn:

1. Method of Interpreting Test Scores

Raw scores

A raw score is a numerical summary of a student's test performance, it is not very meaningful without further information.

1. A raw score is simply the number of points received on a test.
2. "0" in raw scores does not mean absence of trait.

If a student in our class answered 35 items correctly on arithmetic test, and therefore has a raw score of 35. This statement creates a lot of questions in our mind.

1. What is 35 mean?
2. Is that a good score?

© Copyright Virtual University of Pakistan

3. How many items were there on the test?
4. What kind of arithmetic problems were presented?
5. How difficult was test?
6. What is student's position in his class?

Answer to these or similar questions are needed to make any raw score meaningful.

Raw score can be converted into:

1. A description of specific tasks that the student can perform (Criterion reference interpretation)
2. Some type of derived scores to indicate the student's relative position in a clearly defined reference group.

Topic 139: Criterion-referenced Interpretation

In this session student will learn:

1. Criterion-referenced Interpretation

Criterion-referenced Interpretation

In case of standardized test, interpretation can only be made with reference to the constructions on which test was based by the developer.

This is primarily useful in mastery testing where a clearly defined and delimited domain of learning tasks can be most readily obtained.

Such interpretations must be made with caution because these tests were typically designed to discriminate among individuals rather than describe the specific tasks they can perform.

Criterion-referenced interpretations of test results are most meaningful when the test has been specifically designed for this purpose e.g. designing a test that measures a set of clearly stated learning tasks.

© Copyright Virtual University of Pakistan

Topic 140: Guidelines for Criterion-referenced Interpretation

In this session student will learn:

1. Guidelines for Criterion-referenced Interpretation

Guidelines for Criterion-referenced Interpretation

Are the achievement domains (objective or content clusters) homogenous, delimited, and clearly specified? If not, avoid specific descriptive statements.

Are there enough items for each type of interpretation? If not, make tentative judgment and or combine items into larger content clusters for interpretation.

In constructing the test, were the easy items omitted to increase the discrimination among individual? If so, remember that descriptions of what low achievers can do will be severely limited.

Does the test use selection type items only? If so, keep in mind that a proportion of correct answers may be based on guessing.

Do the test items provide a directly relevant measure of the objectives? If not, base the interpretation on hat the items actually measured.

Example: "ability to identify misspelled words" rather than "ability to spell". They are related but not the same process.

Topic 141: Norm-referenced Interpretation

In this session student will learn:

1. Norm-referenced Interpretation

Norm-referenced Interpretation

This interpretation tells us how an individual compares with other persons who have taken the same test e.g. ranking of scores from highest to lowest and to note where an individual's score falls.

© Copyright Virtual University of Pakistan

Standardized tests typically have been designed for norm-referenced interpretations which involves converting the raw scores to derived scores by means of table of norms.

Derived Scores

A derived score is a numerical report of test performance on a score scale that has well-defined characteristics and yields normative meaning.

Criteria Most Desired in Norms

Test norms should be

1. Normal.
2. Representative.
3. Up to date.
4. Comparable.
5. Adequately described

Cautions in Interpreting Test Scores

A test score should be interpreted

1. In terms of the specific test form which it was derived.
2. In light of all of the student's relevant characteristics.
3. According to the type of decision to be made.
4. As a band of scores rather than a specific value.

A test score must be verified by supplementary evidence.

© Copyright Virtual University of Pakistan

Lecture 16: High Stake Testing

Topic 142: High Stake Testing

In this session student will learn:

1. High Stake Testing

Why does it matter?

The use of test and assessment to make decisions that are of prominent educational, financial, or social impact.

Decision based on high stake testing

1. Promotion to next grade
2. Awarding of diploma or degree
3. Evaluation of school performance
4. Incentives and accountability of school staff

Topic 143: High Stake Testing in Pakistan

In this session student will learn:

1. High Stake Testing in Pakistan

High Stake Testing in Pakistan

In school education in Pakistan, high stake testing is conducted at each level from primary to higher secondary.

1. Grade 5 and 8 examination by Punjab Examination Commission.
2. Grade 10 and 12 examination by BISEs

Test construction in High Stake testing

1. The format of items are same as used in CRT in classroom
2. Item of developed by professional employed in dedicated organization

© Copyright Virtual University of Pakistan

3. Item banks are developed
4. Psychometric properties of item are tested
5. The process goes on round the year

Criticism on high stake testing

High stake tests have same issues as classroom test but much larger impact and consequences.

Topic 144: Recommendations for Effective HST

In this session student will learn:

1. Recommendations for effective High Stake Testing

Recommendations for effective High Stake Testing

- Protection against high stake decisions based on single test
- Adequate resources and opportunity to learn
- Validation for each intended separate use
- Full disclosure of likely consequences
- Alignment between test and curriculum
- Validity of passing scores and achievement levels
- Appropriate attention towards language difference between examinees
- Appropriate attention towards examinees with disabilities
- Careful adherence to explicit rules for determining which students are to be tested
- Ongoing evaluation for intended and unintended effects of high stake testing

Topic 145: Preparation for Effective HST

In this session student will learn:

1. Preparation for effective High Stake Testing

Preparation for effective High Stake Testing

1. Focus on task, not on your feelings towards it
2. Inform presents and students about importance of the test.

© Copyright Virtual University of Pakistan

3. Teach test taking skills as part of regular instruction
4. As the test day approaches respond to students questions openly and directly
5. Take advantage of whatever preparation material is available

Topic 146: Institutions involve in assessment

In this session student will learn:

1. Institutions involve in assessment

Institutions involve in assessment

1. Examination commission
2. Board of intermediate and Secondary education (BISEs)
3. Board of Technical Education

Scope of Examination Bodies

1. Examination commission conduct examination at grade 5 and 8 level
2. BISEs hold SSC and HSSC annual examinations
3. Boards of Technical Education conduct examination of various diplomas and certificates etc.

Inter board committee of chairman (IBCC) is a forum to discuss matters relating to development and promotion of intermediate and secondary education and technical education in Pakistan.

For high stake examination at primary and elementary level Baluchistan and Punjab has established examination commissions

National Education Assessment System (NEAS) provides a countrywide picture of situation of education and report to federal policy makers.

Topic 147: Institutions involve in assessment

In this session student will learn:

© Copyright Virtual University of Pakistan

1. Institutions involve in assessment

Following institutions are involved in assessment.

1. National Education Assessment System (NEAS)
2. Provincial Education Assessment Centre (PEAC) in KPK and Sindh
3. Examination Commission (Punjab and Baluchistan)

National Education Assessment system (NEAS) works for promoting quality learning among children of Pakistan by carrying out fair and valid national assessment.

Objectives of NEAS

1. Informing policy
2. Monitoring standards
3. Identifying correlation of achievement
4. Directing teachers' efforts and raising students' achievement

The areas centers of NEAS were established in all provinces and areas. They are still working except in Punjab which was merged in PEC.

Topic 148: National Education Assessment System

In this session student will learn:

1. National Education Assessment system

National Education Assessment system

The National Education Assessment System has been institutionalized in Pakistan at national level with the cooperation of provincial and area Assessment Centers.

NEAS was established as five years development project with the financial assistance of the World Bank and Development for International Development (DfID) in year 2003.

© Copyright Virtual University of Pakistan

NEAS is subordinate office under the ministry of Federal Education & Professional Training.

Objectives of NEAS

1. Informing policy: the extent to which geography and gender are linked to inequality in student performance.
2. Monitoring standards: How well the curricula are translated into knowledge and kills
3. Identifying correlation of achievement: the principal determinants of student performance
4. Directing teachers' efforts and raising students' achievement: assisting teachers to use data to improve student performance.

Working of NEAS

Every year NEAS conduct large scale assessment at primary and elementary level. The content areas it usually cover are reading and writing of language, mathematics and science.

Completion of four cycles of Assessment on a large sale i.e. in 2005, 2006, 2007 and 2008. The assessment results of cycle in 2016 is about come.

© Copyright Virtual University of Pakistan
