

ENG529 Final-Term Current Papers Solution by Barbie

Qno.1: Define Self-assessemnt of E-learning.

Self-assessment in e-learning involves learners critically reflecting on, recording the progress of, and perhaps suggesting grades for their own learning. This process encourages reflection, helps focus feedback from lecturers, and fosters autonomous learning.

Self-assessment

- ❖ Encourage reflection
- ❖ Help lecturers focus their feedback (e.g. not telling students what they are already aware of)
- ❖ An important skill in itself – helping students become more autonomous learners

Qno.2: Define LMS and it's 5 benefits.

A Learning Management System (LMS) is a software application or web-based technology used to plan, implement, and assess a specific learning process. It integrates academic and administrative activities onto one platform, providing communication tools for both asynchronous and synchronous interactions.

Five Benefits of an LMS:

Centralized Learning Platform:

Synchronizes all academic and administrative activities, offering a single platform for content delivery, communication, and assessment.

Enhanced Interaction:

Includes a range of communication tools that facilitate both asynchronous and synchronous interactions, increasing engagement and collaboration among learners and instructors.

Consistency in Information Delivery:

Ensures consistency in delivering educational content, making it accessible from anywhere and at any time, which is especially beneficial for distance learning.

Effective Monitoring and Assessment:

Provides robust tracking and reporting capabilities, enabling educators to monitor progress, assess performance, and identify areas needing additional support.

Flexibility and Customization:

Allows for the integration of third-party tools and customization to meet the specific needs of various educational environments, enhancing the overall learning experience.

Qno.3: What is blended learning approach?

Blended learning refers to combining two different learning environments—face-to-face (synchronous) and online (asynchronous)—in a complementary way to deliver a program of study. This approach supports learners both within and outside the classroom, integrating online and face-to-face activities in a planned, pedagogically valuable manner.

Qno.4: Three other names of Cognitive assessment.

Other Names for Cognitive Assessment:

1. Psychometric Testing
2. Neuropsychological Testing
3. Intelligence Testing

Qno.5: Five levels of Virtual world.

❖ **Age Level:**

The specific age ranges recommended for the virtual world based on the information provided by the company, which may be in grade levels or age.

❖ **Game Level (low, mid, or high):**

A "pure" social environment would rarely be strongly game-like in nature. A MMORPG like World of Warcraft may include social elements, but the primary goal is to gain talents, skills, and tools to complete quests.

❖ **Socialization Level (low, mid, or high):**

VWs are social spaces, but some are more social than others.

❖ **Education Focus (low, mid, or high):**

Nearly all VWs have potential use for education. The key is in how they are used, as VWs are a tool for teachers in the same way that PowerPoint can be a tool.

❖ **Technical Requirements (low, mid, or high):**

Some VWs are more graphics-intensive than others. Some require more bandwidth or are more difficult to navigate.

Qno.6: Write five benefits of interactive whiteboards.

- ❖ Interactive whiteboards turn standard lessons into fun, interactive activities.
- ❖ Students can interact with the learning material and even teach each other.
- ❖ They provide immediate feedback, helping to assess student progress easily.
- ❖ Interactive whiteboards are clean and need very little maintenance, using a specialized pen.
- ❖ They display various media types like photos, graphs, maps, and videos, making lessons creative and inspiring.

Qno.7: Three benefits of E-assessments.

Three Benefits of E-Assessments

❖ Immediate Feedback:

E-assessments provide immediate feedback, helping students improve their knowledge and performance.

❖ Access for Students:

They offer access to students in different geographical locations and at different times.

❖ Sophisticated Reporting:

E-assessments allow for sophisticated reporting, enabling refinement of exercises and identification of areas needing more instruction.

Qno.8: Write two names of Web-course management system that are for higher education.

Two Names of Web-Course Management Systems for Higher Education

- 1. Moodle**
- 2. Blackboard**

These names are mentioned as widely used LMSs (Learning Management Systems) that include a range of communication tools, both asynchronous and synchronous, which are crucial for higher education.

Qno.9: Write five considerations before adopting blended approach.

- ❖ Teacher training is essential for choosing an appropriate blend and developing effective programs.**

- ❖ Consider learner needs, assessment types, and institutional constraints for an appropriate blend.
- ❖ Initial costs for blended learning can be significant but should focus on effective student learning.
- ❖ Design blended courses to enhance learning and retention, requiring self-discipline and motivation.
- ❖ Facilitate peer support and interaction online to help fill knowledge gaps and share learning ideas.

Qno.10: What is CCA program?

The CCA program, also known as "Colossal Cave Adventure," is a pioneering text-based computer game created by Will Crowther in 1975-1976, simulating a virtual environment inspired by the Mammoth Cave system in Kentucky and incorporating fantasy elements. It laid the groundwork for the development of interactive fiction and adventure games, influencing the design of many subsequent games in this genre.

Qno.11: PLATO

The PLATO (Programmed Logic for Automatic Teaching Operations) program, developed at the University of Illinois starting in 1960, was one of the earliest systems for computer-assisted instruction. It used the TUTOR programming language, designed to be user-friendly for educators to create their own instructional content.

PLATO included interactive exercises focusing on grammar and vocabulary, with capabilities for text-based assessment through multiple-choice or short-answer questions. The system also featured innovative touch-sensitive monitors that allowed interactive learning activities like identifying vocabulary items in pictures or playing matching games. PLATO contributed significantly to the development of educational technology, introducing features like hierarchical menus, organized help systems, and spelling/grammar checkers.

Qno.12: What is affordance?

According to Norman (1988), affordance are the perceived possibilities that a user has for tools and applications. The term is used broadly where the perception is mediated through theory and practice toward second language learning goals. For example, the affordance of a button for turning on and off captioning in videos can differ depending on whether a teacher or learner sees it as a shortcut to comprehension, enrichment of the audio channel, or a means to capture new vocabulary items. In this context, affordance include both possibilities and limitations that impact the use of the tool.

Qno.13: E-book two libraries names.

Two well-known e-book libraries are Project Gutenberg and the Internet Archive. Project Gutenberg, founded in 1971 by Michael S. Hart, offers over 30,000 free e-books in plain text format to make them widely accessible. The Internet Archive, launched in 1996, provides permanent access to a vast collection of digitized materials, including e-books, for researchers and the public.

Qno.14: Write three points of SLA in CALL.

Here are three points of SLA (Second Language Acquisition) in CALL (Computer-Assisted Language Learning):

1. SLA-relevant CALL studies critically evaluate the use of a particular tool or app in terms of its potential for facilitating L2 (second language) learning.
2. Success in CALL involves using software to help students learn L2 vocabulary and specific language structures.
3. Effective CALL for SLA must be judged in how technologies are used in ways that are consistent with theoretical and pedagogical developments in instructed SLA.

Qno.15: Write five benefits of CAPT.

Here are five benefits of Computer-Assisted Pronunciation Training (CAPT):

1. CAPT provides students with more practice time and flexibility.
2. It offers a risk-free environment for learners to practice without penalties for errors.
3. The software includes diverse speech sounds from different speakers and registers.
4. CAPT gives clear feedback on L2 intonation and pronunciation.
5. It helps learners take control of their learning process and improve their pronunciation independently .
