OBJECTIVE-ZOO405

ZOO405 – ECOLOGY 100% GUESS

Mid-Term File 2023 By

SULMAN ALI (BS-ZOOLOGY)

(0341-7547044)

01= The Earth is a system consisting of **four** major interacting components.

02= The marine ecosystem covers more than **70%** of the Earth's surface.

03= Producers are known as **autotrophs.**

04= **Abiotic components** are non-living chemical and physical factors of an ecosystem.

05= Fungi is **heterotroph.**

06= The ecosphere also sometimes called the **biosphere.**

07= **Landscape ecology** deals with the exchange of energy, materials, Organisms and other products of ecosystems.

08= Ecologist name **Charles Elton**.

09= Abiotic factors could be acquired from **all of these atmosphere, lithosphere and hydrosphere**.

10= The **hydrosphere** includes all forms of water in the Earth's environment.

11= Namib desert is present in **Africa.**

12= The **First** Law of Thermodynamics, also known as the law of conservation of energy.

13= **Ecology** is the study of organisms,and their environment.

14= Abiotic components of an ecosystem include all chemicalA physical elements i.e. **non-living** component Abiotic components.

15= **Sublimation** occurs when snow or ice changes directly Into water vapour without becoming water.

16**= Trophic level** of an organism is the number of steps it is From the start of the chain.

17= Marine ecosystem covers more than **70**% of the Earth's surface.

18= Forests can be divided into **5** main categories.

19= Ecosphere (also sometimes called the **biosphere.**

20= One **third** of earth surface is covered with deserts.

21= Which main factor decrease population? (**Death and emigration)**

22= _____ study of inland water and their many different aspects.(**Limnology**)

23= **Coral reef** are the special type of marine ecosystem on seefloor.

24= How many types of deserts **four.**

25= Rain fall is less than **500** mm per year.

26= Humans are the **80** percent of phosphorus bones.

27= Tundra ecosystem also known as the **Winter.**

28= Carbon present in the atmosphere is absorbed by plants for **photosynthesis**.

29= The Atacama Desert in Chile and **Namib in Africa** are a good example of Coastal desert ecosystem.

30= Denitrification is the process in which the nitrogen compounds make their **way back** into the **atmosphere** by converting nitrate (NO3-) into gaseous nitrogen (N).

31= Ecology is a branch of science, **including human science, population, community, ecosystem and biosphere.**

32= Humans contain **80%** of phosphorus in teeth and bones.

33= Births and immigration are the main factors that increase the population and **death** and **emigration** are the main factors that decrease the population.

34= The hydrosphere is always in motion as seen through the movement and **flow of water in rivers, streams and the ocean (beach).**

35= Agriculture + ecosystem= **agrosystem**

36= Autotrophs **("self-feeders"),** can make their own food – that is, their own organic compounds.

37= **Ecology** is the study of the interactions between organisms and their environments

38= Which main factor dedreases population? **Death and Emigration**

39= Nimb desert in **Africa**

40= Grasslands occupy about **20%** of the land on the earth surface.

41= Ecologist **Charles Elton's** definition of niche focused on the role of a species, such as its trophic role.

42= The relationship between organisms and their environments **ecology**

43= Births and immigration are the main factors that **increase** the population.

44= **food chain** each organism occupies a different trophic level, defined by how many energy transfers separate it from the basic input of the chain.

45= The study of ecology focuses on the production of proteins and how these proteins affect the organisms and their environment. **Molecular Ecology**

46= The loss of energy to the surrounding environment results in an **increase** of disorder or entropy.

47= A **food web** starts at trophic level 1 with primary producers such as plants.

48= Carbon present in the atmosphere is absorbed by **plants** for photosynthesis.

49= Agricultural ecosystems comprise **30 %** of the Earth's surface.

50= Organisms like worms, microbes, fungi, ants, and other bugs are called **Decomposers.**
