

Question #1

Which of the following is a brain imaging technique.

- A X-Ray
- B CT scan
- C FMRI
- D all of the above

○ Brain imaging techniques:

1. X-Ray
2. CT scan (computerised tomography)
3. MRI (Magnetic resonance imaging)
4. FMRI (Functional Magnetic resonance imaging)

Question #5

According to Kahneman's capacity model attention isresource.

- A unlimited
- B limited
- C mixed
- D developmental

- **Kahneman's capacity model:** According to this model attention is not an unlimited resource. It is a limited resource. He stated that there is flexibility in attention, like we can change our attention from one thing to other thing. Daniel Kahneman has been the pioneer of cognitive psychology. Elements of model include;
 1. **Enduring disposition:** refers to an automatic influence where people direct their attention.
 2. **Monetary Intentions:** refers to A conscious decision to allocate attention to certain tasks or aspects of the environment.
 3. **Arousal:** refers to a psychological state that influences the distribution of mental capacity in the various tasks.

Question #14

The most important thing in Broadbents model is

- A selective filter
- B early selection filter
- C late selection filter
- D attenuator

- Early selection model of attention: argues that locus of selection is at early stage of processing(sensory processing) and that unattended stimuli are not fully processed.

1. Broadbents early selection model: uses filter i.e some things are passed and some are stopped.
2. Triesman early selection model: uses attenuator which means some information is weakened and some is strengthens.

Define Attention and automaticity

- **Attention:** "the concentration of awareness on some phenomenon to the exclusion of other stimuli." Attention is a cognitive process that allow us to choose and concentrate on relevant stimuli.
- **Automaticity:** Automaticity refers to control of one internal psychological processes by external stimuli and events in one's immediate environment, often without knowledge of awareness of such control. e.g car driving while using phone.

Automaticity pros and cons

○ Pros:

1. It allows us to perform routine activities without much concentration.
2. Processes complete themselves without conscious control by subjects.
3. It does not require much attention.

○ Cons:

1. We may make silly mistakes.
2. We may fail to remember what we did.
3. We are not able to show others how we do a task.

Gestalt law of similarity and closure

The law of similarity: states that we perceive elements as a group if they're similar in shape, size, color, or other characteristics. when things appear to be similar to each other, we group them together.

The law of closure: states that people will fill in blanks to perceive a complete object whenever an external stimulus partially matches that object. e.g example, a circle drawn using broken lines is still perceived by the brain as a circle.
