Enlist the procedure involved in the empirical research design.

Very often empirical research of this sort tries to determine whether there is a significant, as opposed to a chance, association between two variables. For example: whether there is a significant association between age and understanding of indirect speech acts as demonstrated by the compliance with indirect requests.

Strong Implicature?

Strong implicature is a communicated implication of an utterance which is the main communicative point of the utterance. The idea is that sometimes a speaker intends that her hearer grasp a particular implication without which the utterance would not be relevant. Strong implicature is implicature that is related directly by the spoken utterances or is that premises and conclusions which the hearer is strongly encouraged but not actually forced to supply.

Quality and relation maxim?

Grice identified the Cooperative Principle as a _super principle 'or a _supreme principle '(1989) that he generalized from four conversational _maxims '. He identifies these maxims as follow:

Maxim of quantity – says that speaker should be as informative as is required. They should give neither too little information nor too much.

Maxim of Quality – information provided in conversation to be genuine and justified.

Maxim of relation – says that speakers are assumed to be saying something that is relevant to what has been said before.

Maxim of manner – says that we should be brief and orderly, and avoid obscurity and ambiguity.

Grice said that hearers assume that speakers observe the cooperative principle and that it is the knowledge of the maxims that allows hearers to draw **inferences** about the speakers 'intentions and applied meaning.

Metaphor and Synecdoche?

Metaphor is a type of figurative speech. Typically, a metaphor ascribes to an entity a property that it does not, strictly and literally speaking, possess, although not all metaphors fit this definition. Metaphors are not restricted to any particular type of word or phrase (Allott, 1988). The metaphorical element of a sentence can be a noun phrase, as in _John is an iceberg. 'Verbs can also be used metaphorically, as in _Flintoff drilled the ball to the boundary. '

Synecdoche is a figure of speech in which an expression that denotes the part of something is used to refer to the whole. For example, _mouth 'in _I've got six hungry mouths to feed'. For example: _willow 'for cricket bat in such phrases as _to wield the willow '(Allott, 1988).

Give two examples for making promise?

Here are two examples of making a promise:

- 1) "I'll meet you at the library at 3 pm tomorrow."
- 2) "Don't worry, I'll finish the project by the end of the week."

These statements commit the speaker to a specific action or outcome, making them promises.

Co-textual Context?

The context of the text itself is known **as co-text**. For example, _She is talking to her boss. 'We see, in this example _her 'is pointing back to _She '. The words used in the conversation give enough knowledge about _what has been mentioned before? and what is going to be '? The co-

text of a word is the set of other words used in the same phrase or sentence. Co-text limits the range of possible interpretations we might have for a word. Consider a complicated example to understand co-textual context. _She met (her) school teacher.

‘We get two situations here: First, _She ‘may have been used for a mother who met school teacher of _her ‘(her daughter). Secondly, _She ‘may have been used for a lady who met her own teacher. _I met a boy who was very brilliant. ‘In this example, _who ‘is pointing back to _the boy whom I met ‘. With the analysis of previous examples, we can say, Co-Textual Context cannot be ignored in pragmatics to interpret the meaning of the text. Co-textual context can be in a sentence or within sentences.

Maxim violation?

Maxim violation is unostentatiously, quiet **deceiving**. Violating the maxim Quantity – Husband: How much did that new dress cost? Wife: Less than the last one. Here, the wife covers up the price of the dress by not saying how much; thus, not giving the required information to the husband and violating maxim of quantity.

Violating the maxim Quality – Considering the same example, the wife when asked _How much did that new dress cost? ‘It could have violated the maxim of quality by not being sincere and giving him the wrong information i.e. thirty-five hundred rupees.

Violating the maxim relation – Similarly, in answer to _How much did that new dress cost? the wife tries to distract him and change the topic saying: I know, let ‘s go out tonight. Now, where would you like to go? This shows the violation of the maxim of relation.

Violating the maxim manner – In answer to _How much did that new dress cost? ‘, if she said that _a tiny fraction of my salary, though probably a bigger fraction of the salary of the women that sold it to me ‘, Hoping that it could be taken as an answer and the matter could be dropped. It is, thus, like the wife answers the question in a way that could be said to be violating the maxim of manner, in that she says everything except what the husband wants to know.

Deictic Center?

Deictic Center is when we hear a deictic, we typically make a number of assumptions about the context. For instance, when we hear an utterance like _The postbox is on the left ‘we have to decide whether the postbox is on the left in relation to the speaker or the hearer. The default deictic center is the speaker ‘s location at the time of utterance.

Intertextual?

Intertextual refers to the relationship between two or more texts that are connected through shared meanings, themes, or language. This connection can be explicit or implicit, and it can involve:

- 1) Quotations or references to other texts.
- 2) Allusions to myths, legends, or historical events.
- 3) Shared themes, motifs, or symbolism.
- 4) Similarities in language, tone, or style.

Intertextuality highlights the idea that texts are not isolated entities, but rather part of a larger cultural and literary landscape.

Communicative Competence?

Communicative Competence is the ability to communicate in a language. It includes competence with the grammatical forms of the language and the ability to put forms of the language to use in communication (Allott, 1988). This term was invented by the anthropologist and sociolinguist Dell Hymes.

Now a popular notion in applied linguistics and language teaching, where the aim is to teach not just grammar and speech sounds, but also strategies for communicating in that language. This teaching tends not so much to be concerned with pragmatics in a narrow sense (implicatures, reference assignment, etc.) as with teaching social conventions about how the language is used (Allott, 1988).

A speaker should have the competence to talk to a lady, old man, a professional differently. This is communicative competence how perfectly you answer after analyzing the situation!

Here are 3 fundamental concepts:

- 1) Knowledge of the world
- 2) Linguistic knowledge
- 3) Pragmatic knowledge

Factors that influence social distance?

- 1) Culture
- 2) Personal space
- 3) Relationship
- 4) Power dynamics
- 5) Context

These factors interact and influence one another, shaping social interactions and relationships.

Referential Communication?

Tarone and Swierzbina (2009: 68) chose to study how learners used language resources to signal given and new information to achieve effective referential communication: —Effective referential communication is inherently interactive. Speakers must take into account any information the listener already has, and any information the listener needs to know in order to identify the entity being referred to. It is also an aspect of language use that depends on careful decisions by speakers regarding linguistic forms, for example, in Academic Speech Events.

Heritage (1984) view about the understanding of a speaker's action?

To Heritage (1984), a speaker's action is context-shaped in that its contribution to an ongoing sequence of actions cannot be understood except by reference to the context. This contextualization of utterances is a major and unavoidable procedure which hearers use to rely on to interpret conversational contributions.

enlist three lexical types that help in the cohesion?

Here are three lexical types that help in cohesion:

- 1) **Repetition**: Repeating words or phrases to link ideas and create cohesion.
- 2) **Synonyms**: Using words with similar meanings to create cohesion and avoid repetition.
- 3) **Hyponyms**: Using specific words that are related to a more general term, creating a cohesive relationship between ideas.

what are the difficulties to develop pragmatics in a classroom?

- 1) Cultural differences
- 2) Contextual dependence
- 3) Implicitness
- 4) Limited opportunities for authentic practice
- 5) Assessment challenges
- 6) Teacher training and support
- 7) Materials and resources
- 8) Class size and diversity
- 9) Time constraints
- 10) Balancing explicit instruction with authentic practice

Cross-cultural Pragmatics?

Cross cultural pragmatics is a subfield of pragmatics. Kasper and Blum-Kulka (1993) defined CCP as the study of linguistic acts by language users from different cultural backgrounds. Cross-cultural pragmatics aims at understanding the extent to which non-shared knowledge or in simple terms our schemas affect or modify the retrieval of intended meaning.

CCP looks at issues outside classrooms and concentrates on environments where participants are not explicitly learners, but rather full members of the target language community. In pragmatics, —culturel is not Culture, with a capital C – that is, the literature, music, and art. Rather, it is culture as a reflection of the values and beliefs about the world, held by the members of a community which forms, in effect, the substratum of their everyday life.

write (FSA) for Face saving Act and (FTA) for face threatening act before the following sentences:

1. pass me that paper.

2. Could you pass me that paper ‘

3. I ‘m dying for a drink. 4. Yes, it’s really hot. Isn ‘t it? ‘

Here are the sentences with (FSA) for Face-Saving Act and (FTA) for Face-Threatening Act:

1. **FTA:** Pass me that paper. (direct and potentially rude)
2. **FSA:** Could you pass me that paper? (polite and considerate)
3. **FTA:** I'm dying for a drink. (direct and potentially impolite)
4. **FSA:** Yes, it's really hot. Isn't it? (polite and seeks agreement)

Explicature?

According to relevance theorists, the “explicature,” or “explicit content”, of an utterance of a sentence is a —developmentll of the sentence ‘s —logical formll.

Explicature. in simple terms, is directly conveyed content - —orally and graphologically form of an utterance. On the other hand, implicature is something which is implied in an utterance. It could mean that a speaker means one thing and conveys something else in addition. It is a hidden concept.
