

(Mid Term Important Subjective By Rana)

MGT510 MID TERM PAPER SHARED BY STUDENT

ON JUNE 24, 2018 AT 10:17PM

1. How many Quality Management Principles are defined by ISO 9004-2000? (6, 7, 8, 9??)
2. Which of the following mentioned countries adopted the idea of quality control and developed its economy? [China, JAPAN, USA, UK]
3. Which of the following authors have defined systems thinking as the capstone for true organizational learning? [Ross Ashby; Jay Forrester; Ludwig von Bertalanffy; Peter Senge]
4. [Updated; Authentic; Reliable; All of the given options]
5. Which one of the following is foundation of total quality? [Philosophical; Technical; Managerial; Administrative]
6. Which one of the following author presented theory of motivation, theory X and theory Y? [Douglas McGregor; Frederick Herzberg; Abraham Maslow; David McClelland]
7. Deliberately ignoring some group members because of disliking is one of self-oriented meeting behaviours may be termed as? [Belittling; Withdrawing; Excluding; Blocking]
8. Which one of the following is not included in the concept of quality? [Quality by definition; Quality by philosophy; Quality by technology; Quality by attitude]
9. Kaoru Ishikawa was the first person who introduced? [Quality circle; Quality products idea; Quality services idea; Quality manufacturing process]
10. Where have organizations shifted their focus from Process Quality to? [Design quality; Total quality; Required quality; Acquired quality]
11. In the new paradigm of quality, which one of the following responsibilities managers assume? [Means of supervision; Means of improvement; Means to communicate; Ends and not the means]
12. SIPOC diagram also known as a? [High-level process map; Low-level process map; High-level process measurement; Low-level process measurement]
13. Which of the following highest honor was awarded to Deming for his services? [The Order of the Sacred Treasure; The European IST Grand Prize; The Henry Laurence Gantt Medal; The Ron Brown Award]
14. In the followings all are not included in Deming's fourteen points for management EXCEPT? [Teach and instituted leadership; Employees should have only one direct supervisor; Organizations should strive to promote team spirit and unity; Discipline must be maintained in organizations but methods for doing can vary]
15. "Identify an opportunity and plan for change". It is an element of PDCA Deming Cycle and best refers to the following? [PLAN; DO; CHECK; ACT]
16. Which one of the following is part of Quality Control in Juran's trilogy? [Deploy the plans to operational levels; Determine who the customers are; Identify customer needs; Act on differences between performance and goals]
17. Sum of costs incurred in maintaining acceptable quality levels plus the cost of failure to maintain that level may refer to one of the following [Cost of Quality; Total Quality Cost; Price of Product/Service; Quality Price]
18. The ISO 9001:2000 standards which of the following describe correct? [A set of product specifications for all industries; Known as the Baldrige standards in the US; More widely adopted in the U.S. than in Europe; Quality management procedures that address leadership, documentation, and record-keeping]

MID TERM PAPER FALL SEMESTER 2017

Total questions in the mid term paper were 18

12 objectives for 12 Marks

Subjective part of the mid term paper

13) Define concept of quality in different ways. (3 marks)

14) How fact-based decision making does help an organization in bringing continuous improvement in its processes & practices? (3 marks)

15) How do you see the future of Quality Management in the increasing global market place? (3 marks)

16) Suppose you visit a bank to open an account but the CRO is too busy to respond. What do you suggest to this bank to improve its services in this regard? Relate your suggestions to ANY TWO principles of TQM? (5 marks)

17) What are the different costs that are included in the total quality cost for a product? If an organization keeps the total quality costs at a minimum, what benefit it will gain? (5 marks)

18) How does Crosby comment on the Zero Defect (ZD) Concept? What is your personal opinion on the fact that “is zero defect production is rationally possible keeping in mind the humanly nature of the employees”? (5 marks)

MGT510 MID TERM PAPER SHARED BY STUDENT

TODAY 9.00 AM EXAM 12.19.2016

2 question 3 marks(juran quality fitness for use)

3 question 5 marks

1.what is unavoidable cost. Give two example of unavoidable cost.3marks

Unavoidable costs are those related to preventing defects. These include inspection, sampling, sorting, and other quality control initiatives.

2.Data and information are needed to analysis the all organization. Do you agree or disagree give rational view.5marks

At the work level, data provide real-time information to identify assignable reasons for variation, determine root causes, and take corrective action as needed. This might require lean communication a channel consisting of bulletins, computerized quality reports, and digital readouts of part dimensions to provide immediate information on what is happening and how things are progressing. At the process level, operational performance data such as yields, cycle times, and productivity measures help manager determine whether they are doing the right job, whether they are using resources effectively, and whether they are improving. Information at this level generally is aggregated; for example daily or weekly scrap reports, customer complaint data obtained from customer service representatives or monthly sales and cost figures faxed in from field offices. At the organization level, quality and operational performance data from all areas of the firm, along with relevant financial, market, human resources, and supplier data, form the basis for strategic planning and decision making. Such information is highly aggregated and obtained from many different sources throughout the organization.

3.How can the different between tradtional view and total quality perspective. Explain any five points.5marks The traditional view of quality saw employees as passive workers who followed orders given by supervisors and managers. It was their labor, not their brains that was wanted. With total quality, employees are empowered to think and make recommendations for continual improvement. They are also shown the control boundaries within which they must work and are given freedom to make decisions within those boundaries. **major difference** how quality is defined,

how quality is measured, how quality is achieved, quality as a function, attitude towards defects and responsibility for quality.

major differences between the traditional view of quality and the total quality perspective:

Productivity vs quality, high quality is defined, high quality is measured, high quality is achieved and attitude towards defects.

My Paper, Question i
remembered are
How many discussion
skills are?

9

. Open the discussion

2. Listen
3. Ask for clarification
4. Manage participation
5. Summarize
6. Manage time
7. Contain digressions
8. Test for agreement
9. Close the discussion

Who present the theory X & theory Y?

McGregor's Theory X model of motivation: worker dislike work and require close supervision and control. TQ organizations support the premise of Theory Y: workers are self-motivated, seek responsibility, and exhibit a high degree of imagination and creativity at work. TQ managers provide leadership rather than overt intervention in the processes of their subordinates,

1. Theory of variation and special causes?

The second part of Profound Knowledge some understands of statistical theory, particularly as it applies to variation. Just as no two pizzas or "Qeema Nans" are exactly alike, no two outputs from any production process are exactly alike. A production process contains many sources of variation. Different lots of material will vary in strength, thickness, or moisture content, for example. Cutting tools will have inherent variation in strength and composition. During manufacturing, tools will experience wear, machine vibrations will cause changes in settings, and electrical fluctuations will cause variations in power. Operators may not position parts on fixtures consistently.

Common causes, assignable causes and special causes.

2. What is transcendent view of quality?

The concept of quality has often been defined, from a transcendent view, as “innate excellence”. This view implies that high quality is something timeless and enduring, an essence that transcends or rises

above individual tastes or styles. It often regards quality as an un-analyzable property that people learn to recognize through experience, just as Plato argued that beauty can be understood only after exposure to a series of objects that display its characteristics

3. Industrial development and proceeds?

Japan was the first major non-Western nation to get on the Western technological and organizational advances of the century after the first industrial revolution. It subsequently proved fully able to develop and contribute to the broad, constant technological advances that began in the 20th century, as science

became connected to technology. Japan's economic development remains a model for many technologically less advanced countries which have not yet mastered modern technology to organizational forms. Knowledge of Japanese technological and economic history can contribute importantly to our understanding of economic growth in the modern era

4. Discuss unavoidable cost with at least 2 examples?

Repeated

My Today's Paper:

Total question was 25, 19 MCQs (Mostly conceptual, don't know whether came from past papers or) and rest subject questions.

Q1: External Failure Cost with two examples (3)

External Failure Costs

Failure costs occurring after delivery or shipment of the product -- and during or after furnishing of a service -- to the customer. Examples are the costs of:

- Processing customer complaints
- Customer returns
- Warranty claims
- Product recalls

Q2: Goal and Role of management in Organism Model and cultural model (3)

Organism model goal is organizational survival and role is objective; inside boundary.

Cultural model goal is meeting individual role and role is boundaries defined through relationships.

Q3: Scenarios was given and needs to describe three reasons while considering TQM principles (5)

. **Customer focus** – understanding customer’s needs, striving to exceed their expectations.

2. **Leadership** – establishing direction, unity of purpose, and a supportive work environment.
3. **Involvement of people** – ensuring that all employees at all levels are able to fully use their abilities for the organization's benefit.
4. **Process approach** – recognizing that all work is done through processes, and managing them accordingly.
5. **System approach to management** – expands on the previous principle in that achieving any objective requires a system of interrelated processes.
6. **Continual improvement** – as a permanent organizational objective, recognizing and acting on the fact that no process is so good that further improvement is impossible.
7. **Factual approach to decision making** – acknowledging that sound decisions must be based on analysis of factual data and information.
8. **Mutually beneficial supplier relationships** – to take advantage of the synergy that can be found in such relationships

Q4: Total cost of Quality included what? and how we can benefit for reducing it (5)

Prevention cost, appraisal cost, failure cost, internal failure cost and external failure cost

Total quality costs are the sum of the above costs to produce a product or to deliver a service. This represents the difference between the actual cost of a product or service and what the reduced cost would be if there were no possibility of substandard service, failure of products or defects in their manufacture. The measure of revenue saved by producing the right product the first time and every time will actually be the return one gets by implementing the system of quality.

Q5: Traditional quality view vs Total quality, explain five points (5)

Repeated

December 29,

2015 at 6:23pm my

today's paper

q1 write four parts of profound knowledge

System of Profound Knowledge

Profound knowledge consists of four parts: (1) appreciation for a system, (2) theory of variation, (3) theory of knowledge, and (4) psychology

Q2 ISO 9001

The purpose of ISO 9001 is to define the minimum Quality Management System requirements needed to achieve customer satisfaction by meeting specified product requirements. Compliance with ISO 9001 may be used by an organization to demonstrate its capability to meet customer requirements.

Q3 write juran 10 points of quality improvement

1. Build awareness of both the need for improvement and opportunities for improvement.

2. Set goals for improvement.
 3. Organize to meet the goals that have been set.
 4. Provide training.
 5. Implement projects aimed at solving problems.
 6. Report progress.
 7. Give recognition.
 8. Communicate results.
 9. Keep score.
 10. Maintain momentum by building improvement into the company's regular systems. Q4
- European award

European Quality Award

In October 1991, the European Foundation for Quality Management (EFQM) in partnership with the European Commission and the European Organization for Quality announced the creation of the European Quality Award. The award was designed to increase awareness throughout the European Community, and businesses in particular, of the growing importance of quality to their competitiveness in the increasingly global market and to their standards of life.

My today's MGT510 paper:

Total Marks: 39

Total Qs: 23

Total MCQs: 18

The subjective questions are as follows:

1. how conformance to quality contributes to increase in organizational profitability. justify with rationale Conformance: the degree to which physical and performance characteristics of a product match preestablished standards.

Value-based approaches expand on the user-based view of quality by incorporating the notion of "price of costs." Regarding value-based approaches, Garvin (1988) suggests "a quality product is one that provides performance or conformance at an acceptable price or cost. By this reasoning, a \$ 500 running shoe, no matter how well-constructed, could not be a quality product, for it would find few buyers." In support of this view, researchers have demonstrated a positive relationship between market share and value-based measures of quality.

2. in order to achieve business excellence, it is important to maintain effective communication with customers and suppliers. Explain

Excellent communication between customers and suppliers is the key to total organizational excellence.

This will eradicate the 'demanding nuisance/idiot' view of customers, which pervades some organizations. Poor communications often occur in the supply chain between organizations, when neither party realizes how poor they are. Feedback from both customers and suppliers needs to be improved, where dissatisfied customers and suppliers do not communicate their problems. In such cases non-conformance of purchased products or services is often due to the customer's inability to communicate their requirements clearly. If these ideas are also used within an organization, then the internal supplier/customer interfaces will operate much more smoothly

3. discuss self oriented meeting behaviors of group members

Self-oriented group members are mainly focused on fulfilling their own personal needs. They do not attend to the needs of the group.

Controlling, withdrawing, seeking attention, diverting, excluding, belittling and blocking are the behaviours

4. What is PDCA? explain, why is it called a cycle?

Among the most widely used tools for continuous improvement is a four-step quality model—the plandocheck-act (PDCA) cycle, also known as Deming Cycle or Shewhart Cycle:

Act: If the change was successful, implement it on a wider scale and continuously assess your results. If the change did not work, begin the cycle again.

5. what are the consequences faced by organization due to lack of attention by employees. how these errors can be controlled efficiently?

Most human error is caused by lack of attention rather than lack of knowledge. Lack of attention is created when we assume that error is inevitable. If we consider this condition carefully and pledge ourselves to make a constant conscious effort to do our jobs right the first time, we will take a giant step toward eliminating the waste of rework, scrap, and repair that increases cost and reduces individual opportunity

Following were long questions:

Discuss the meeting behaviours of self-oriented group members.

Repeated

Explain prevention cost with the help of examples.

Prevention Costs

The costs of all activities specifically designed to prevent poor quality in products or services.

Examples are the costs of:

- New product review
- Quality planning
- Supplier capability surveys

- Process capability evaluations
- Quality improvement team meetings
- Quality improvement projects
- Quality education and training

What is quality improvement and how can it proceed according to Juran's trilogy? Quality Improvement: The improvement of quality should be ongoing continual:

1. Develop the infrastructure necessary to make annual quality improvements.
2. Identify specific areas in need of improvement, and implement improvement projects.
3. Establish a project team with responsibility for completing each improvement project.
4. Provide teams with what they need to be able to diagnose problems to determine root causes develop solutions, and establish control that will maintain gains made.

Why does routine inspection create problems in the organization?

Understand Inspection – Routine inspection acknowledges defects but does not add value to the product. Instead, it encourages defects because “someone else” catches and fixes the problems. This procedure increases costs and decreases productivity. Workers must take responsibility for their own work and be able to take appropriate action to assure good quality. Manager need to understand how variation affects their processes and to take steps to reduce the causes of variation. Inspection should be used as information-gathering tools for improvement, not as an end in itself. Explain the following

- **Canadian Awards for Business Excellence** Canada’s National Quality Institute (NQI) recognizes Canada’s foremost achievers of excellence through the prestigious Canada Awards for Excellence. NQI is a nonprofit organization designed to stimulate and support quality-driven innovation within all Canadian enterprises and institutions, including business, government, education, and health care.
- and
- **Australian Business Excellence Awards** The Australian Quality Awards (now called Business Excellence Awards) were developed independently from the Baldrige Awards in 1988. The awards are administered by the Australian Quality Awards Foundation, a subsidiary of the Australian Quality council.

My Today's Paper

Q1.concept of quality?

People define quality in many ways. Some think of quality as superiority or excellence, others view it as a lack of manufacturing or service defects, still others think of quality as related to product features or price. Followings are some of many ways to look at quality.

1. perfection
2. consistency
3. eliminating waste
4. speed of delivery

Q2.characteristic of quality management system?

Characteristics of Total Quality Management

Customer focus (internal and external)

Obsession with quality

Scientific approach to problem solving

Long-term commitment

Teamwork

Continual process and product improvement

Education and training intensive

Freedom through control

Unity of purpose

Employee involvement and empowerment

Q3.statistical quality control era vs strategic quality control era?

strategic quality management era:

There are, however, dramatic differences from earlier eras.

For the first time, top managers began to view quality positively as a competitive advantage, and to address it in their strategic planning processes, which are focused on customer value.

Because quality started to attract the attention of top managers, it impacted management throughout the organization. Quality was not just for the inspectors or people in the quality assurance department to worry about. This era marks the emergence of a new paradigm for management. Statistical quality control requires that numbers derived from measures of processes or products be analyzed according to a theory of variation that links outcomes to uses.

19- Benefits of QMS 8th principal (3)

Mutually beneficial supplier relationships – to take advantage of the synergy that can be found in such relationships.

20- Definition of quality by Crosby & cost of quality (3)

QUALITY is DEFINED as conformance to requirements

The only performance measurement is the cost of quality. The cost of quality is the expense of non conformance. Crosby notes that most companies spend 15 to 20 percent of their sales dollars on quality costs. A company with a well-run quality management program can achieve a cost of quality that is less than 2.5 percent of sales, primarily in the prevention and appraisal categories. Crosby's program calls for measuring and publicizing the cost of poor quality. Quality cost data are useful in calling problems to management's attention, selecting opportunities for corrective action, and tracking quality improvement over time. Such data provide visible proof of improvement and recognition of achievement. Juran also supports this theme. 21- Quality improvement & Juran trilogy (5) Repeated

22- Industrial development and
proceeds (5) Repeated

MGT510 MID TERM PAPER SHARED BY STUDENT

ON DECEMBER 21, 2016 AT 10:03AM

Long Questions:

The Quality Manager of ABC Company is planning to get itself registered with ISO 9001 (2000) for its quality management systems (QMS). Suggest the various benefits that the organization can achieve after being registered.

What relationship exists between quality and profits? How can the increased quality of design assure the increased profits for an organization? Justify your answer with valid rationale points.

The characteristics of the quality are critically important for both manufacturing and service organizations to be considered. Briefly describe the important characteristics of quality for a service organization? How will you critically analyze the work of Juran? Do you think all of his proposed ten points were originally his own work that does not mess with the contribution by any other Quality Guru?

How fact-based decision making does help an organization in bringing continuous improvement in its processes & practices?

Question # 20 of 20 (Start time: 11:18:05 AM) Total Marks: 1

Which of the following statements, in relation to system, is TRUE for people failing to understand the components of Profound Knowledge?

Select correct option:

They see the symptoms but not the deep causes of problems (true ?)

They do not know when expectations are realistic

They do not understand motivation/why people do what they do

They do not know how to plan and accomplish learning and improvement

Which of the following involves determining what to control, establishing units of measurement so that data may be objectively evaluated?

Select correct option:

Quality improvement

Quality planning

Quality control

Quality process

(no idea u guys tell exact right option)

In which of the following model, organization is taken as a machine Select correct option: Organic Model

Mechanistic Model

Structural Model

Unstructured Model

?????

At which level, does the quality concern centers on meeting external customer requirements?
Select correct option:

Organizational level

Performer level

Process level

Production level

According to Deming, which of the following statement is not occurred when people don't understand psychology?

Select correct option:

They don't understand motivation

They don't see trends that are occurring

They don't see trends that are occurring (not sure)

They induces motivation that have no positive effect

Which of the following are generally easy to detect using statistical methods, and it is usually economical to remove them?

Select correct option:

Common causes (right ?)

Special causes

Implicit causes

Assignable causes

Which of the following is not included in quality control phase of quality management?

Select correct option:

Develop Quality Manual

Process Performance Data

Corrective Actions

Paperwork Control (?)

Which of the following is true for subsystems?

Select correct option:

These are not linked together as internal customers and suppliers

These are linked together as external customers and suppliers

These are linked together as external and internal customers and suppliers
These are linked together as internal customers and suppliers

Corporate culture is shifting from focus on local market to focus on _____

Select correct option:

Glocal Market

Global Market (controversial MCQ HAH :/)

Regional Market

None of the given

Making openings for less aggressive members by directly asking their opinion or making a general request for input. This refers to which of the following discussion skills in meetings?

Select correct option:

Closing the discussion

Acting as gatekeepers

Testing for consensus

Containing digression

Which of the following begins with identifying customers, both external and internal, determining their needs, and developing product features that respond to customer needs?

Select correct option:

Quality improvement

Quality planning

Quality control

Quality process

Which of the following statements, in relation to psychology, is TRUE for people failing to understand the components of Profound Knowledge?

Select correct option:

They see the symptoms but not the deep causes of problems (?)

They do not know when expectations are realistic

They do not understand motivation/why people do what they do

They do not know how to plan and accomplish learning and improvement
