

200 REPEATED ★ MIDTERMS CONCEPTUAL MCQs

COURSE

BT406

RESEARCH METHODOLOGY AND SKILL ENHANCEMENT

CRASH QUESTIONS
TO GET MAXIMUM MARKS

Concept Focused | Exam Oriented | High Yield Preparation

Study Smart.
Achieve More.

Learn Today, Lead Tomorrow.

Aim High, Achieve More.

Focus your efforts.
Prepare with purpose.

Smart preparation.
Better performance.

Your success
is our mission.

RELIABLE • TRUSTED • RESULT ORIENTED

= PREPARE SMART • STAY CONSISTENT • SUCCEED BIG =

These MCQs are carefully selected from past midterms to help you understand key concepts.
Use this resource along with your official handouts for the best preparation and maximum results.
If any question appears in your exam, consider it a positive step towards your success!

Best of Luck!

MOST FREQUENTLY REPEATED CONCEPTUAL AREAS IN BT406 RESEARCH METHODOLOGY AND SKILL ENHANCEMENT MIDTERM EXAMS

Main Group (BS Biological Sciences) https://chat.whatsapp.com/DWXwJpXahbxFVQutey8JXN

BT406 – Research Methodology and Skill Enhancement https://chat.whatsapp.com/KfPh8oIEpSd62pjYzqjUS4

Q1. Research conducted to solve immediate practical problems is called _____.

Answer: Applied research

Q2. The process of systematically investigating a problem to generate knowledge is known as _____.

Answer: Research

Q3. The first step in the research process is identifying the _____.

Answer: Research problem

Q4. Information gathered from previously published sources is called _____ data.

Answer: Secondary

Q5. The review that places a study within the larger body of knowledge is called _____ review.

Answer: Context

Q6. A framework that explains relationships among variables is called the _____ framework.

Answer: Theoretical

Q7. Statements predicting relationships between variables are called _____.

Answer: Hypotheses

Q8. The variable presumed to cause changes in another variable is the _____ variable.

Answer: Independent

Q9. The variable that represents the outcome of interest is the _____ variable.

JAWAD CHAUDHARY

Answer: Dependent

Q10. A variable that influences the direction or strength of a relationship is called a _____ variable.

Answer: Moderating

Q11. Translating abstract concepts into measurable indicators is known as _____.

Answer: Operationalization

Q12. The process of assigning numbers or symbols according to rules is called _____.

Answer: Measurement

Q13. Concepts that can assume different values are called _____.

Answer: Variables

Q14. The extent to which an instrument measures what it intends to measure is called _____.

Answer: Validity

Q15. The consistency of a measuring instrument is known as _____.

Answer: Reliability

Q16. Validity that assesses whether all aspects of a concept are represented is called _____ validity.

Answer: Content

Q17. The type of validity that predicts future outcomes is called _____ validity.

Answer: Predictive

Q18. Validity assessed by comparing measures obtained at the same time is called _____ validity.

Answer: Concurrent

Q19. The degree to which indicators of the same construct are related is called _____ validity.

Answer: Convergent

Q20. The extent to which measures of different constructs are unrelated is called _____ validity.

Answer: Discriminant

Q21. The simplest measurement scale used only for classification is the _____ scale.

Answer: Nominal

Q22. The scale that provides ranking without equal intervals is the _____ scale.

Answer: Ordinal

Q23. The scale characterized by equal intervals but lacking a true zero is the _____ scale.

Answer: Interval

Q24. The scale possessing all interval properties along with an absolute zero is the _____ scale.

Answer: Ratio

Q25. The major entity being studied in research is called the _____ of analysis.

Answer: Unit

Q26. A review that traces the development of an issue over time is called a _____ review.

Answer: Historical

Q27. A review conducted to demonstrate familiarity with a field of study is called _____ review.

Answer: Self-review

Q28. A statement expressing a relationship between concepts is called a _____.

Answer: Proposition

Q29. The process of selecting a subset from a population is called _____.

Answer: Sampling

Q30. The complete group of elements relevant to a study is known as the _____.

Answer: Population

Q31. The list containing all elements of the population is called the sampling _____.

Answer: Frame

Q32. The basic element selected during the sampling process is called the sampling _____.

Answer: Unit

Q33. Sampling in which every population element has an equal chance of selection is called _____ random sampling.

Answer: Simple

Q34. A probability sampling technique that selects every kth element is called _____ sampling.

Answer: Systematic

Q35. Dividing a population into homogeneous groups before sampling is called _____ sampling.

Answer: Stratified

Q36. Selecting naturally occurring groups instead of individual elements is called _____ sampling.

Answer: Cluster

Q37. A non-probability sampling method based on accessibility is called _____ sampling.

Answer: Convenience

Q38. Sampling in which participants are chosen based on the researcher's judgment is called _____ sampling.

Answer: Judgmental

Q39. A non-probability sampling technique using predefined category proportions is called _____ sampling.

Answer: Quota

Q40. A sampling method where existing participants recruit future participants is called _____ sampling.

Answer: Snowball

Q41. Data collected directly by the researcher for a specific purpose are called _____ data.

Answer: Primary

Q42. Observation and communication are two major approaches to collecting _____ data.

Answer: Primary

Q43. A method of data collection involving direct watching of behavior is called _____.

Answer: Observation

Q44. Information obtained by asking respondents questions is collected through the _____ approach.

Answer: Communication

Q45. An interview conducted using a predetermined set of questions is called a _____ interview.

Answer: Structured

Q46. Interviews allowing flexibility in questioning are called _____ interviews.

Answer: Unstructured

Q47. A questionnaire completed by respondents without interviewer assistance is called a _____ questionnaire.

Answer: Self-administered

Q48. The process of testing a questionnaire before full-scale administration is called _____ testing.

Answer: Pilot

Q49. The tendency of respondents to provide socially acceptable answers is known as _____ desirability bias.

Answer: Social

Q50. The ethical principle requiring participants to voluntarily agree to participate is called informed _____.

Answer: Consent

Q51. Protecting participants by ensuring their identities cannot be linked to responses is called _____.

Answer: Anonymity

Q52. Keeping participants' information private and secure is known as _____.

Answer: Confidentiality

Q53. Providing participants with complete information about the study after deception is called _____.

Answer: Debriefing

Q54. Intentionally withholding information about a study's true purpose is called _____.

Answer: Deception

Q55. The principle that participants should not be exposed to unnecessary risk is known as protection from _____.

Answer: Harm

Q56. Copying another person's work without proper acknowledgment is called _____.

Answer: Plagiarism

Q57. Making up research data that were never collected is called data _____.

Answer: Fabrication

Q58. Manipulating or altering research findings is called data _____.

Answer: Falsification

Q59. The extent to which a measurement instrument yields consistent results is called _____.

Answer: Reliability

Q60. Reliability assessed by administering the same test on two occasions is called _____ reliability.

Answer: Test-retest

Q61. The reliability that measures internal consistency among items is called _____ consistency reliability.

Answer: Internal

Q62. The degree to which different observers provide similar assessments is called _____ reliability.

Answer: Inter-rater

Q63. A concept that is difficult to observe directly due to its complexity has a high degree of _____.

Answer: Abstraction

Q64. Abstract ideas represented through words or symbols are called _____.

Answer: Concepts

Q65. The process of defining exactly how a concept will be measured is called _____ definition.

Answer: Operational

Q66. The relationship between two or more concepts stated in a declarative form is known as a _____.

Answer: Proposition

Q67. A set of interrelated propositions explaining a phenomenon is called a _____.

Answer: Theory

Q68. Research designed to gain preliminary understanding of a problem is called _____ research.

Answer: Exploratory

Q69. Research aimed at accurately describing characteristics of a population is called _____ research.

Answer: Descriptive

Q70. Research intended to explain cause-and-effect relationships is called _____ research.

Answer: Explanatory

Q71. The main goal of descriptive research is to answer questions related to who, what, when, where, and _____.

Answer: How

Q72. Explanatory research primarily focuses on understanding _____ phenomena occur.

Answer: Why

Q73. A study collecting data at a single point in time is called a _____ study.

Answer: Cross-sectional

Q74. Research involving repeated observations over extended periods is called a _____ study.

Answer: Longitudinal

Q75. A longitudinal study following the same individuals over time is called a _____ study.

Answer: Panel

Q76. A longitudinal study that examines changes within a specific population sharing a common characteristic is called a _____ study.

Answer: Cohort

Q77. A longitudinal study involving repeated observations of the same variables over time is called a _____ study.

Answer: Time-series

Q78. The process of assigning numbers or symbols to characteristics according to rules is called _____.

Answer: Measurement

Q79. The simplest level of measurement used only for labeling categories is the _____ scale.

Answer: Nominal

Q80. A measurement scale that provides rank ordering without equal intervals is the _____ scale.

Answer: Ordinal

Q81. A scale that allows meaningful comparison of differences between values but lacks a true zero point is the _____ scale.

Answer: Interval

Q82. The measurement scale that possesses an absolute zero point is the _____ scale.

Answer: Ratio

Q83. The property of a nominal scale requiring categories not to overlap is called _____ exclusiveness.

Answer: Mutual

Q84. The property ensuring that every observation fits into some category is called _____ exhaustiveness.

Answer: Collective

Q85. The ability of a measurement instrument to measure what it is intended to measure is called _____.

Answer: Validity

Q86. The extent to which a measure adequately covers all dimensions of a concept is called _____ validity.

Answer: Content

Q87. Validity established when a measure accurately predicts future performance is called _____ validity.

Answer: Predictive

Q88. Comparing a new measure with an existing criterion measured at the same time assesses _____ validity.

Answer: Concurrent

Q89. Evidence that indicators of the same construct are strongly related demonstrates _____ validity.

Answer: Convergent

Q90. The extent to which measures of different constructs are not highly correlated indicates _____ validity.

Answer: Discriminant

Q91. The consistency of results obtained from repeated measurements reflects _____.

Answer: Reliability

Q92. Reliability assessed by administering the same instrument to the same respondents at different times is called _____ reliability.

Answer: Test-retest

Q93. The reliability that evaluates the consistency of items within a scale is known as _____ consistency reliability.

Answer: Internal

Q94. Agreement among multiple observers assessing the same phenomenon reflects _____ reliability.

Answer: Inter-rater

Q95. The degree to which a concept is general and difficult to observe directly is called the degree of _____.

Answer: Abstraction

Q96. A statement accepted as true without direct proof for research purposes is called an _____.

Answer: Assumption

Q97. The major entity being investigated in a research study is referred to as the unit of _____.

Answer: Analysis

Q98. A hypothesis stating that no relationship exists between variables is called a _____ hypothesis.

Answer: Null

Q99. A hypothesis predicting the direction of a relationship between variables is called a _____ hypothesis.

Answer: Directional

Q100. A hypothesis indicating a relationship exists without specifying its direction is called a _____ hypothesis.

Answer: Non-directional

Q101. A hypothesis developed to be tested statistically is called a _____ hypothesis.

Answer: Null

Q102. The hypothesis that represents the researcher's expected outcome is called the _____ hypothesis.

Answer: Alternative

Q103. A hypothesis predicting that employee motivation increases productivity is a _____ hypothesis.

Answer: Directional

Q104. A hypothesis stating that a relationship exists without specifying positive or negative effects is called a _____ hypothesis.

Answer: Non-directional

Q105. Variables that cannot vary within a study are called _____.

Answer: Constants

Q106. A variable that explains how an independent variable influences a dependent variable is called a _____ variable.

Answer: Intervening

Q107. Variables that may unintentionally affect study outcomes are called _____ variables.

Answer: Extraneous

Q108. The outcome variable in an experiment is called the _____ variable.

Answer: Dependent

Q109. The presumed cause in a cause-and-effect relationship is the _____ variable.

Answer: Independent

Q110. A variable affecting the strength of a relationship is a _____ variable.

Answer: Moderating

Q111. Validity ensures that researchers measure the intended _____.

Answer: Concept

Q112. Reliability focuses primarily on measurement _____.

Answer: Consistency

Q113. An instrument can be reliable without being _____.

Answer: Valid

Q114. Content validity is usually evaluated through expert _____.

Answer: Judgment

Q115. Predictive validity is assessed using future _____.

Answer: Outcomes

Q116. Concurrent validity compares measures obtained at the same _____.

Answer: Time

Q117. High correlation among indicators of the same construct demonstrates _____ validity.

Answer: Convergent

Q118. Low correlation between different constructs indicates _____ validity.

Answer: Discriminant

Q119. Stability of measurements over time is assessed through _____ reliability.

Answer: Test-retest

Q120. Reliability among observers is called _____ reliability.

Answer: Inter-rater

Q121. Reliability examining consistency among questionnaire items is _____ consistency reliability.

Answer: Internal

Q122. A scale with equal intervals and a true zero is the _____ scale.

Answer: Ratio

Q123. Temperature measured in Celsius uses the _____ scale.

Answer: Interval

Q124. Ranking employees based on performance uses the _____ scale.

Answer: Ordinal

Q125. Gender classification represents the _____ scale.

Answer: Nominal

Q126. The property requiring categories not to overlap is called _____ exclusiveness.

Answer: Mutual

Q127. The requirement that all observations fit into categories is called _____ exhaustiveness.

Answer: Collective

Q128. The process of assigning numbers according to rules is called _____.

Answer: Measurement

Q129. Translating theoretical concepts into observable indicators is called _____.

Answer: Operationalization

Q130. Job satisfaction is an example of an abstract _____.

Answer: Concept

Q131. The complexity level of a concept is called its degree of _____.

Answer: Abstraction

Q132. A relationship statement between concepts is called a _____.

Answer: Proposition

Q133. A group of related propositions forms a _____.

Answer: Theory

Q134. Theory primarily helps explain and _____ phenomena.

Answer: Predict

Q135. Research aimed at exploring unfamiliar problems is _____ research.

Answer: Exploratory

Q136. Research describing characteristics of populations is _____ research.

Answer: Descriptive

Q137. Research explaining why relationships exist is _____ research.

Answer: Explanatory

Q138. Research conducted to solve practical problems is _____ research.

Answer: Applied

Q139. The first stage of the research process is identifying the research _____.

Answer: Problem

Q140. Reviewing previous studies helps identify research _____.

Answer: Gaps

Q141. A framework explaining relationships among variables is called the _____ framework.

Answer: Theoretical

Q142. Research questions often lead to the formulation of _____.

Answer: Hypotheses

Q143. The blueprint for conducting research is called the research _____.

Answer: Design

Q144. Cross-sectional studies collect data at one _____.

Answer: Time

Q145. Longitudinal studies collect data over multiple _____.

Answer: Periods

Q146. Following the same individuals over time defines a _____ study.

Answer: Panel

Q147. Studies examining trends across repeated intervals are _____ studies.

Answer: Time-series

Q148. Studies focusing on groups sharing common characteristics are _____ studies.

Answer: Cohort

Q149. The entire group relevant to a study is the _____.

Answer: Population

Q150. A subset selected from a population is called a _____.

Answer: Sample

Q151. The list of population elements is the sampling _____.

Answer: Frame

Q152. The entity selected during sampling is the sampling _____.

Answer: Unit

Q153. Random selection of every kth element represents _____ sampling.

Answer: Systematic

Q154. Selecting naturally occurring groups is called _____ sampling.

Answer: Cluster

Q155. Dividing populations into homogeneous groups uses _____ sampling.

Answer: Stratified

Q156. Choosing easily accessible participants is _____ sampling.

Answer: Convenience

Q157. Sampling based on researcher expertise is _____ sampling.

Answer: Judgmental

Q158. Sampling based on predetermined category proportions is _____ sampling.

Answer: Quota

Q159. Recruiting participants through referrals is _____ sampling.

Answer: Snowball

Q160. Information collected directly for a study is _____ data.

Answer: Primary

Q161. Previously existing information sources provide _____ data.

Answer: Secondary

Q162. Watching behaviors directly is the _____ method.

Answer: Observation

Q163. Collecting information through questions uses the _____ approach.

Answer: Communication

Q164. Testing questionnaires before full implementation is called _____ testing.

Answer: Pilot

Q165. Participants' voluntary agreement is called informed _____.

Answer: Consent

Q166. Protecting participant identities is known as _____.

Answer: Anonymity

Q167. Keeping participant information private is called _____.

Answer: Confidentiality

Q168. Providing study details after deception is called _____.

Answer: Debriefing

Q169. Intentionally misleading participants is called _____.

Answer: Deception

Q170. Copying another author's work without acknowledgment is _____.

Answer: Plagiarism

Q171. Inventing research results is data _____.

Answer: Fabrication

Q172. Altering research findings is data _____.

Answer: Falsification

Q173. Ethical research protects participants from potential _____.

Answer: Harm

Q174. Self-review demonstrates researcher _____ in a field.

Answer: Familiarity

Q175. Context review places research within existing _____.

Answer: Knowledge

Q176. Historical review traces developments over _____.

Answer: Time

Q177. Scientific methods emphasize empirical _____.

Answer: Evidence

Q178. Scientific findings should be capable of _____.

Answer: Verification

Q179. Repeating studies to confirm findings reflects _____.

Answer: Replication

Q180. Scientific research minimizes personal _____.

Answer: Bias

Q181. Objectivity means conclusions depend on _____.

Answer: Evidence

Q182. Precision in research enhances measurement _____.

Answer: Accuracy

Q183. Research findings should be logically _____.

Answer: Consistent

Q184. Scientific methods involve systematic _____.

Answer: Observation

Q185. A well-developed theory narrows the range of relevant _____.

Answer: Facts

Q186. Theory helps organize knowledge into meaningful _____.

Answer: Relationships

Q187. Facts become useful when interpreted within a _____.

Answer: Theory

Q188. Survey research commonly uses _____ for data collection.

Answer: Questionnaires

Q189. Face-to-face data collection often uses personal _____.

Answer: Interviews

Q190. Lower costs are an advantage of _____ questionnaires.

Answer: Mail

Q191. Interviewer influence may introduce interviewer _____.

Answer: Bias

Q192. Respondents providing socially acceptable responses exhibit _____ desirability bias.

Answer: Social

Q193. The final stage of research involves _____ writing.

Answer: Report

Q194. Research reports communicate study _____.

Answer: Findings

Q195. Recommendations in reports are derived from research _____.

Answer: Results

Q196. Scientific methods contribute to theory _____.

Answer: Development

Q197. Theory testing requires empirical _____.

Answer: Data

Q198. Strong validity increases confidence in research _____.

Answer: Findings

Q199. Reliable instruments produce _____ measurements.

Answer: Consistent

Q200. High-quality research requires both validity and _____.

Answer: Reliability

🚨 200 Most Important Repeated Conceptual MCQs 🚨

⚠ Important Note:

These MCQs have been compiled from repeated exam patterns, important concepts, and previous assessments to support your preparation.

📚 However, do NOT rely solely on this compilation.

For the best results, thoroughly study your Handouts, PPTs, Video Lectures, and Course Material as well.

Prepare Smart, Work Hard, and Aim for Excellence.

Best of Luck! 🍀📚

BS Biological Sciences Team 🚀🎓
