MOST FREQUENTLY REPEATED CONCEPTUAL AREAS IN BT601 – VIROLOGY CONCEPT CRACKER MCQS FINAL EXAMS

Main Group (BS Biological Sciences) *https://chat.whatsapp.com/DWXwJpXahbxFVQutey8JXN*

BT601 – Virology *https://chat.whatsapp.com/I2ZEnwltoqNHIQx5HinIpv*

Q1: Virology is the study of _____.

Answer: Viruses

Q2: A virus is a noncellular particle composed of genetic material and a _____.

Answer: Protein coat (capsid)

Q3: Viruses are classified as _____ intracellular parasites.

Answer: Obligate

Q4: Viruses replicate using the _____ systems of the host cell.

Answer: Enzyme

Q5: The typical size range of viruses is _____ nm.

Answer: 20–400

Q6: A virion contains either DNA or _____, but never both.

Answer: RNA

Q7: The protein coat surrounding the viral genome is called the _____.

Answer: Capsid

Q8: Viruses do not grow by cell division but by _____ of newly synthesized components.

Answer: Assembly

Q9: Viruses are incapable of independent _____.

Answer: Metabolism

Q10: Viruses can infect animals, plants, bacteria, and even _____.

Answer: Archaea

Q11: The largest known virus mentioned in the handouts is _____.

Answer: *Pithovirus sibericum*

Q12: The virus with one of the largest known genomes is _____.

Answer: *Pandoravirus*

Q13: Viruses cannot be cultured in synthetic media because they require _____ cells.

Answer: Living host

Q14: One living characteristic of viruses is their ability to _____.

Answer: Mutate

Q15: Viruses are considered acellular because they lack _____.

Answer: Cytoplasm

Q16: Viruses contain no cellular _____.

Answer: Organelles

Q17: Edward Jenner developed a vaccine against _____.

Answer: Smallpox

Q18: Louis Pasteur developed the first vaccine against _____.

Answer: Rabies

Q19: The first filterable infectious agent was described by _____.

Answer: Ivanovsky

Q20: Martinus Beijerinck introduced the concept of the virus as a contagious _____.

Answer: Element

Q21: Tobacco mosaic virus (TMV) is an example of a _____ virus.

Answer: Plant

Q22: Loeffler and Frosch discovered the first recognized _____ virus.

Answer: Animal

Q23: Reed and colleagues identified _____ as the first human virus.

Answer: Yellow fever virus

Q24: Viruses that infect bacteria are called _____.

Answer: Bacteriophages

Q25: Virus propagation in embryonated chicken eggs was introduced by _____ and Goodpasture.

Answer: Woodruff

Q26: The viral genome was proven to be nucleic acid by the _____ experiment.

Answer: Hershey–Chase

Q27: WHO declared the eradication of _____ in 1979.

Answer: Smallpox

Q28: Human papillomavirus (HPV) is strongly associated with _____ cancer.

Answer: Cervical

Q29: HIV was discovered by Barré-Sinoussi and _____.

Answer: Montagnier

Q30: The International Committee on Taxonomy of Viruses is abbreviated as _____.

Answer: ICTV

Q31: ICTV was originally established as the International Committee on _____ of Viruses.

Answer: Nomenclature

Q32: Virus taxonomy is based on genetic and biological _____.

Answer: Properties

Q33: Virus order names end with the suffix _____.

Answer: -virales

Q34: Virus family names end with the suffix _____.

Answer: -viridae

Q35: Virus subfamily names end with the suffix _____.

Answer: -virinae

Q36: Virus genus names end with the suffix _____.

Answer: -virus

Q37: The Baltimore classification is based primarily on viral _____ synthesis.

Answer: mRNA

Q38: Baltimore Group I viruses possess _____ genomes.

Answer: Double-stranded DNA (dsDNA)

Q39: Baltimore Group II viruses possess _____ genomes.

Answer: Single-stranded DNA (ssDNA)

Q40: Baltimore Group III viruses possess _____ genomes.

Answer: Double-stranded RNA (dsRNA)

Q41: Baltimore Group IV viruses possess _____ RNA genomes.

Answer: Positive-sense single-stranded

Q42: Baltimore Group V viruses possess _____ RNA genomes.

Answer: Negative-sense single-stranded

Q43: Retroviruses belong to Baltimore Group _____.

Answer: VI

Q44: Hepadnaviruses belong to Baltimore Group _____.

Answer: VII

Q45: Parvoviridae contains a _____ DNA genome.

Answer: Single-stranded

Q46: Dependoviruses require _____ viruses for replication.

Answer: Helper

Q47: Human Parvovirus B19 causes _____ disease.

Answer: Fifth

Q48: The characteristic facial rash of fifth disease is known as the _____ rash.

Answer: Slapped cheek

Q49: Parvovirinae primarily infect _____.

Answer: Vertebrates

Q50: Densovirinae primarily infect _____.

Answer: Invertebrates

Q51: Papovaviridae contains a _____ DNA genome.

Answer: Double-stranded (dsDNA)

Q52: Papovaviridae is divided into _____ subfamilies.

Answer: Two

Q53: The two subfamilies of Papovaviridae are Papillomavirinae and _____.

Answer: Polyomavirinae

Q54: Human papillomavirus primarily infects the _____ epithelium.

Answer: Squamous

Q55: HPV commonly causes benign _____.

Answer: Warts (papillomas)

Q56: HPV is mainly transmitted through _____ contact.

Answer: Skin-to-skin

Q57: BK virus may cause mild _____ disease.

Answer: Respiratory

Q58: JC virus can affect the kidneys, respiratory system, and the _____.

Answer: Brain

Q59: Simian Virus 40 is commonly abbreviated as _____.

Answer: SV40

Q60: SV40 infection has been associated with _____ tumors.

Answer: Malignant

Q61: Adenoviridae possesses a _____ DNA genome.

Answer: Linear double-stranded

Q62: Human adenoviruses belong to the genus _____.

Answer: Mastadenovirus

Q63: Adenoviruses are _____ enveloped.

Answer: Non-

Q64: Adenoviruses were first isolated from human _____ tissue.

Answer: Adenoid

Q65: Human adenoviruses are divided into _____ species (A–G).

Answer: Seven

Q66: Adenoviruses are transmitted primarily by the _____ route.

Answer: Fecal-oral

Q67: The incubation period of adenovirus infection is _____ days.

Answer: 3–10

Q68: Adenoviruses commonly infect _____ cells.

Answer: Epithelial

Q69: Adenovirus infection commonly affects the respiratory tract, eye, urinary bladder, and _____.

Answer: Intestines

Q70: Most adenovirus infections occur in _____.

Answer: Children

Q71: The name Herpes is derived from the Greek word meaning _____.

Answer: Creeping

Q72: Herpesviridae contains _____ major subfamilies.

Answer: Three

Q73: HSV-1 belongs to the subfamily _____.

Answer: Alphaherpesvirinae

Q74: Cytomegalovirus belongs to the subfamily _____.

Answer: Betaherpesvirinae

Q75: Epstein–Barr virus belongs to the subfamily _____.

Answer: Gammaherpesvirinae

Q76: Herpesviridae possesses a _____ dsDNA genome.

Answer: Linear

Q77: HSV-1 is mainly transmitted through the _____ route.

Answer: Oral

Q78: HSV-2 is primarily transmitted through _____ contact.

Answer: Sexual

Q79: HSV-1 commonly causes _____ sores.

Answer: Cold

Q80: Varicella-zoster virus causes _____.

Answer: Chickenpox

Q81: Epstein–Barr virus primarily infects _____ lymphocytes.

Answer: B

Q82: Cytomegalovirus is abbreviated as _____.

Answer: CMV

Q83: Human herpesvirus 8 is associated with _____ sarcoma.

Answer: Kaposi's

Q84: Herpesvirus complications are more severe in _____ individuals.

Answer: Immunocompromised

Q85: Poxviridae contains the _____ viruses known.

Answer: Largest

Q86: Poxviruses possess a _____ DNA genome.

Answer: Double-stranded

Q87: Human smallpox is caused by the _____ virus.

Answer: Variola

Q88: Human smallpox was eradicated in _____.

Answer: 1977

Q89: Monkeypox is mainly restricted to _____ Africa.

Answer: West

Q90: Cowpox virus is mainly restricted to _____.

Answer: Europe

Q91: Hepadnaviridae contains a _____ double-stranded DNA genome.

Answer: Partially

Q92: The best-known member of Hepadnaviridae is _____ virus.

Answer: Hepatitis B

Q93: Hepadnaviruses are primarily _____, infecting liver cells.

Answer: Hepatotropic

Q94: Chronic Hepatitis B infection may lead to _____ carcinoma.

Answer: Hepatocellular

Q95: Hepatitis B virus belongs to the genus _____.

Answer: Orthohepadnavirus

Q96: Duck Hepatitis B virus belongs to the genus _____.

Answer: Avihepadnavirus

Q97: Hepatitis B virus is transmitted through infected blood and _____ fluids.

Answer: Body

Q98: Hepatitis B may produce both acute and _____ disease.

Answer: Chronic

Q99: Duck viral hepatitis is highly contagious in young _____.

Answer: Ducklings

Q100: Mortality in duck viral hepatitis may reach as high as _____ percent.

Answer: 95

Q101: Picornaviridae possesses a _____-sense single-stranded RNA genome.

Answer: Positive

Q102: The prefix "Pico" means _____.

Answer: Small

Q103: Picornaviridae viruses are generally _____ enveloped.

Answer: Non-

Q104: Poliovirus belongs to the genus _____.

Answer: Enterovirus

Q105: Hepatitis A virus belongs to the genus _____.

Answer: Hepatovirus

Q106: Rhinoviruses primarily infect the _____.

Answer: Nose

Q107: Aphthovirus causes _____ and Mouth Disease.

Answer: Foot

Q108: Picornaviruses possess an _____ capsid.

Answer: Icosahedral

Q109: Poliovirus is transmitted mainly through the _____ route.

Answer: Fecal-oral

Q110: Permanent paralysis in poliomyelitis results from damage to _____ nerves.

Answer: Spinal

Q111: Caliciviridae possesses _____-sense single-stranded RNA.

Answer: Positive

Q112: Caliciviridae viruses are _____ enveloped.

Answer: Non-

Q113: Norovirus is a major cause of viral _____.

Answer: Gastroenteritis

Q114: Rabbit hemorrhagic disease virus belongs to the genus _____.

Answer: Lagovirus

Q115: Norwalk virus belongs to the genus _____.

Answer: Norovirus

Q116: Feline calicivirus primarily causes _____ disease.

Answer: Respiratory

Q117: Caliciviruses naturally infect _____.

Answer: Vertebrates

Q118: Reoviridae possesses a _____ RNA genome.

Answer: Double-stranded

Q119: The term "Reo" stands for Respiratory, Enteric, and _____.

Answer: Orphan

Q120: Rotaviruses are major causes of _____ gastroenteritis.

Answer: Infantile

Q121: Reoviruses possess an _____ capsid.

Answer: Icosahedral

Q122: Reoviridae is the largest family of _____ RNA viruses.

Answer: Double-stranded

Q123: Colorado tick fever virus belongs to the genus _____.

Answer: Orbivirus

Q124: Arbovirus is derived from the term Arthropod-_____ virus.

Answer: Borne

Q125: Arboviruses are mainly transmitted through the bites of infected _____.

Answer: Arthropods

Q126: The most common arthropod vector for arboviruses is the _____.

Answer: Mosquito

Q127: Crimean-Congo hemorrhagic fever is primarily transmitted by _____.

Answer: Ticks

Q128: Sandflies transmit _____ Valley fever.

Answer: Rift

Q129: More than _____ arboviruses are known worldwide.

Answer: 600

Q130: Approximately _____ arboviruses are recognized as human pathogens.

Answer: 130

Q131: Togaviridae possesses a _____-sense RNA genome.

Answer: Positive

Q132: Togaviruses are generally _____.

Answer: Enveloped

Q133: Alphaviruses are mainly _____ borne.

Answer: Mosquito

Q134: Eastern equine encephalitis virus belongs to the genus _____.

Answer: Alphavirus

Q135: Chikungunya virus produces the _____ type of disease.

Answer: Arthritic

Q136: Rubella virus belongs to the genus _____.

Answer: Rubivirus

Q137: Rubella is mainly transmitted through the _____ tract.

Answer: Respiratory

Q138: Flaviviridae viruses possess _____-sense RNA genomes.

Answer: Positive

Q139: Flaviviruses are generally _____.

Answer: Enveloped

Q140: Hepatitis C virus belongs to the genus _____.

Answer: Hepacivirus

Q141: Dengue virus is transmitted primarily by _____.

Answer: Mosquitoes

Q142: Zika virus belongs to the genus _____.

Answer: Flavivirus

Q143: Yellow fever virus belongs to the genus _____.

Answer: Flavivirus

Q144: West Nile virus is a member of the family _____.

Answer: Flaviviridae

Q145: Tick-borne encephalitis is caused by a member of the family _____.

Answer: Flaviviridae

Q146: Pestiviruses primarily infect _____ mammals.

Answer: Non-human

Q147: Pegivirus belongs to the family _____.

Answer: Flaviviridae

Q148: Flaviviruses generally have _____ RNA genomes.

Answer: Non-segmented

Q149: The incubation period of many flavivirus infections ranges from _____ days.

Answer: 2–15

Q150: Hepatitis C virus belongs to the family _____.

Answer: Flaviviridae

Q151: Arenaviridae is mainly associated with _____-transmitted diseases.

Answer: Rodent

Q152: Arenaviruses possess a _____-sense RNA genome.

Answer: Negative

Q153: Arenaviridae contains _____ RNA segments.

Answer: Two

Q154: The two groups of arenaviruses are Old World and _____ World.

Answer: New

Q155: Lassa fever is caused by an _____ World arenavirus.

Answer: Old

Q156: Lymphocytic choriomeningitis virus is abbreviated as _____.

Answer: LCMV

Q157: LCMV causes inflammation of the brain and _____ cord.

Answer: Spinal

Q158: Arenaviruses are generally _____.

Answer: Enveloped

Q159: Coronaviridae possesses a _____-sense single-stranded RNA genome.

Answer: Positive

Q160: Coronaviruses possess the _____ RNA genomes among RNA viruses.

Answer: Largest

Q161: Coronaviridae contains _____ major subfamilies.

Answer: Two

Q162: Coronaviruses infect mammals as well as _____.

Answer: Birds

Q163: Avian infectious bronchitis virus is abbreviated as _____.

Answer: IBV

Q164: Coronaviruses are generally _____ in shape.

Answer: Spherical

Q165: Torovirinae is a subfamily of the family _____.

Answer: Coronaviridae

Q166: Retroviridae possesses a _____-sense RNA genome.

Answer: Positive

Q167: Retroviruses contain the enzyme _____ transcriptase.

Answer: Reverse

Q168: Retroviruses integrate their genome into the host cell _____.

Answer: DNA

Q169: HIV causes Acquired Immunodeficiency _____.

Answer: Syndrome

Q170: HTLV-1 stands for Human T-cell _____ Virus Type 1.

Answer: Lymphotropic

Q171: Lentivirus is a genus within the family _____.

Answer: Retroviridae

Q172: Retrovirus particles are generally _____.

Answer: Enveloped

Q173: Bunyaviridae possesses _____-sense single-stranded RNA.

Answer: Negative

Q174: Most bunyaviruses are _____ borne.

Answer: Vector

Q175: Bunyaviruses are commonly transmitted by mosquitoes, ticks, or _____.

Answer: Sandflies

Q176: Hantaviruses are commonly associated with _____.

Answer: Rodents

Q177: Tospoviruses infect only _____.

Answer: Plants

Q178: Crimean-Congo hemorrhagic fever virus belongs to the family _____.

Answer: Bunyaviridae

Q179: Bunyavirus genomes consist of _____ RNA segments.

Answer: Three

Q180: Orthomyxoviridae possesses _____-sense segmented RNA genomes.

Answer: Negative

Q181: Influenza virus A causes all influenza _____.

Answer: Pandemics

Q182: Influenza virus B infects humans and _____.

Answer: Seals

Q183: Influenza virus C infects humans, pigs, and _____.

Answer: Dogs

Q184: Influenza virus D primarily infects pigs and _____.

Answer: Cattle

Q185: Orthomyxoviruses possess _____ RNA genome segments.

Answer: Eight

Q186: Influenza viruses are generally _____.

Answer: Enveloped

Q187: Paramyxoviridae possesses _____-sense RNA genomes.

Answer: Negative

Q188: Paramyxoviruses naturally infect _____.

Answer: Vertebrates

Q189: Measles is caused by a member of the family _____.

Answer: Paramyxoviridae

Q190: Mumps is caused by a member of the family _____.

Answer: Paramyxoviridae

Q191: Respiratory Syncytial Virus is abbreviated as _____.

Answer: RSV

Q192: Human parainfluenza viruses are abbreviated as _____.

Answer: HPIV

Q193: Rhaboviridae possesses _____-sense RNA genomes.

Answer: Negative

Q194: Rhaboviruses are characteristically _____ shaped.

Answer: Bullet

Q195: Rabies virus belongs to the genus _____.

Answer: Lyssavirus

Q196: Rabies primarily affects the _____ system.

Answer: Nervous

Q197: Toroviridae possesses _____-sense single-stranded RNA.

Answer: Positive

Q198: The term "Toro" is derived from the Latin word meaning _____.

Answer: Torus

Q199: Breda virus naturally infects _____.

Answer: Cattle

Q200: Toroviruses possess an elongated tubular capsid with _____ symmetry.

Answer: Helical

Q201: Viruses evolve through the process of natural _____.

Answer: Selection

Q202: RNA viruses generally evolve more rapidly than _____ viruses.

Answer: DNA

Q203: Genetic exchange between two viruses infecting the same cell is called _____.

Answer: Recombination

Q204: Influenza viruses commonly exchange genome segments through _____.

Answer: Reassortment

Q205: Reassortment occurs when two viruses infect the _____ host cell.

Answer: Same

Q206: Influenza virus contains _____ RNA genome segments.

Answer: Eight

Q207: RNA viruses exhibit high mutation rates because RNA polymerase lacks _____ ability.

Answer: Proofreading

Q208: DNA polymerase possesses _____ activity, resulting in fewer mutations.

Answer: Proofreading

Q209: A permanent alteration in viral genetic material is called a _____.

Answer: Mutation

Q210: Genetic differences among viruses within a population are known as genetic

_____.

Answer: Variation

Q211: Viral genetic variation mainly arises through recombination and _____ mutation.

Answer: Random

Q212: HIV develops resistance to antiviral drugs because of its high _____ rate.

Answer: Mutation

Q213: HIV is an example of a rapidly evolving _____ virus.

Answer: RNA

Q214: Evolution enables viruses to adapt to new _____.

Answer: Hosts

Q215: Mixed influenza viruses arise after genome segment _____.

Answer: Exchange

Q216: Viral evolution may produce strains with altered _____.

Answer: Virulence

Q217: Host immune pressure promotes viral _____.

Answer: Evolution

Q218: Viral genome sequencing helps identify newly emerging _____.

Answer: Viruses

Q219: Sequencing data are widely used for _____ analysis.

Answer: Phylogenetic

Q220: Viral genome sequencing assists in _____ and sub-genotyping.

Answer: Genotyping

Q221: Phylogenetic analysis is based on viral genome _____.

Answer: Sequences

Q222: Comparison of viral sequences helps determine _____ relationships.

Answer: Evolutionary

Q223: Vaccines stimulate the body's _____ response against viruses.

Answer: Immune

Q224: Vaccination programs reduce the incidence of viral _____.

Answer: Diseases

Q225: Surveillance after vaccination monitors disease incidence and _____ events.

Answer: Adverse

Q226: Immune responses help the body _____ viral infection.

Answer: Resist

Q227: Some viruses evade immunity through continuous _____.

Answer: Mutation

Q228: Drug development often targets viral _____ processes.

Answer: Replication

Q229: Antiviral drugs interfere with essential steps in viral _____.

Answer: Replication

Q230: Viruses rely on host cellular _____ systems for multiplication.

Answer: Enzyme

Q231: Viral replication occurs only inside _____ cells.

Answer: Living

Q232: Viruses are unable to perform independent _____ metabolism.

Answer: Cellular

Q233: Viral host range refers to the variety of _____ a virus can infect.

Answer: Hosts

Q234: Some viruses can cross _____ barriers.

Answer: Species

Q235: Viruses infect organisms belonging to all major biological _____.

Answer: Kingdoms

Q236: Viral genome coding strategies differ among virus _____.

Answer: Groups

Q237: Understanding viral replication supports development of _____ drugs.

Answer: Antiviral

Q238: Research on viruses has contributed greatly to modern _____ biology.

Answer: Molecular

Q239: Viruses have played an important role in understanding _____ expression.

Answer: Gene

Q240: Virus-host interaction influences disease _____.

Answer: Outcome

Q241: Many antiviral drugs act by blocking viral _____.

Answer: Replication

Q242: Genome sequencing can reveal the emergence of _____ viral variants.

Answer: Novel

Q243: Viral mutations may alter susceptibility to _____ drugs.

Answer: Antiviral

Q244: Viral evolution is driven by mutation, recombination, and natural _____.

Answer: Selection

Q245: Influenza viruses are well known for frequent genetic _____.

Answer: Reassortment

Q246: Viral phylogeny is reconstructed using genome _____.

Answer: Sequences

Q247: Vaccination contributes to long-term disease _____.

Answer: Control

Q248: Host immune responses exert _____ pressure on viruses.

Answer: Selective

Q249: Continuous viral mutation complicates _____ development.

Answer: Vaccine

Q250: Understanding viral evolution is essential for effective disease _____.

Answer: Prevention

Q251: Viruses contain only one type of nucleic acid, either DNA or _____.

Answer: RNA

Q252: The complete infectious virus particle is called a _____.

Answer: Virion

Q253: Viruses lack cellular organelles and therefore are considered _____.

Answer: Acellular

Q254: Viral multiplication depends entirely on the _____ cell.

Answer: Host

Q255: The outer protein shell of a virus is known as the _____.

Answer: Capsid

Q256: Viral classification based on genome replication strategy was proposed by _____.

Answer: David Baltimore

Q257: Baltimore classification divides viruses into _____ groups.

Answer: Seven

Q258: Retroviruses replicate through a _____ intermediate.

Answer: DNA

Q259: Hepadnaviruses replicate through an _____ intermediate.

Answer: RNA

Q260: ICTV is responsible for international viral _____.

Answer: Taxonomy

Q261: Virus family names always end with the suffix _____.

Answer: -viridae

Q262: Virus genus names always end with the suffix _____.

Answer: -virus

Q263: Virus order names always end with the suffix _____.

Answer: -virales

Q264: Parvoviridae contains the _____ DNA viruses.

Answer: Smallest

Q265: Poxviridae contains the _____ known viruses.

Answer: Largest

Q266: Herpesviruses establish _____ infections after primary infection.

Answer: Latent

Q267: Hepatitis B virus primarily infects the _____.

Answer: Liver

Q268: Poliovirus primarily damages the _____ nervous system.

Answer: Central

Q269: Rotavirus is a leading cause of _____ gastroenteritis.

Answer: Infantile

Q270: Arboviruses are transmitted by blood-feeding _____.

Answer: Arthropods

Q271: Dengue virus belongs to the family _____.

Answer: Flaviviridae

Q272: Chikungunya virus belongs to the family _____.

Answer: Togaviridae

Q273: HIV belongs to the family _____.

Answer: Retroviridae

Q274: Rabies virus belongs to the family _____.

Answer: Rhabdoviridae

Q275: Influenza viruses belong to the family _____.

Answer: Orthomyxoviridae

Q276: Measles virus belongs to the family _____.

Answer: Paramyxoviridae

Q277: Coronavirus genomes are composed of _____-sense RNA.

Answer: Positive

Q278: Arenavirus genomes are _____ segmented.

Answer: Bi-

Q279: Bunyavirus genomes are composed of _____ segments.

Answer: Three

Q280: Orthomyxovirus genomes are composed of _____ RNA segments.

Answer: Eight

Q281: Influenza pandemics are mainly caused by Influenza virus _____.

Answer: A

Q282: HIV causes progressive destruction of _____ lymphocytes.

Answer: CD4

Q283: HPV infection is strongly associated with _____ cancer.

Answer: Cervical

Q284: Epstein–Barr virus primarily infects _____ lymphocytes.

Answer: B

Q285: Cytomegalovirus belongs to the _____ Herpesvirinae subfamily.

Answer: Beta

Q286: HSV-1 commonly causes _____ sores.

Answer: Cold

Q287: HSV-2 is the major cause of _____ herpes.

Answer: Genital

Q288: Varicella-zoster virus causes _____.

Answer: Chickenpox

Q289: Norovirus commonly causes acute viral _____.

Answer: Gastroenteritis

Q290: Hepatitis C virus belongs to the genus _____.

Answer: Hepacivirus

Q291: RNA viruses generally mutate faster because RNA polymerase lacks _____.

Answer: Proofreading

Q292: Viral reassortment is especially common in _____ viruses.

Answer: Influenza

Q293: Genetic exchange between viruses contributes to viral _____.

Answer: Evolution

Q294: Genome sequencing is essential for viral _____ analysis.

Answer: Phylogenetic

Q295: Vaccination primarily induces protective _____ responses.

Answer: Immune

Q296: Antiviral drugs mainly target viral _____.

Answer: Replication

Q297: Viral diseases can be controlled through effective _____ programs.

Answer: Vaccination

Q298: Continuous surveillance helps detect newly emerging viral _____.

Answer: Variants

Q299: Understanding virus–host interaction improves disease _____.

Answer: Management

Q300: The ultimate objective of virology is the prevention and _____ of viral diseases.

Answer: Control

🚨 Concept Cracker MCQS Most Important Repeated Conceptual 🚨

⚠ Important Note:

These MCQs have been compiled from repeated exam patterns, important concepts, and previous assessments to support your preparation.

📚 However, do NOT rely solely on this compilation.

For the best results, thoroughly study your Handouts, PPTs, Video Lectures, and Course Material as well.

Prepare Smart, Work Hard, and Aim for Excellence.

Best of Luck! 🍀📚

BS Biological Sciences Team 🧬🎓
