Lecture: 21

Content-Based Instruction

It is the teaching of content or information in the language being learned with little or no direct effort to teach the language separately from the content being taught.

Principles of Content-Based Instruction

1. Content-Based Instruction better reflects learners' needs for learning a second language
2. People learn a second language more successfully when they use the language as a means of acquiring information, rather than mastering the language for its own sake.

Assumptions of Content-Based Instruction

1. **Language is purposeful**
   Role of language as a vehicle for learning content entails the centrality of linguistic entities longer than single sentences, because the focus of teaching is how meanings are constructed and communicated through texts and discourse.
2. **Language is text and discourse-based**
   In a content-based class, students are often involved in activities that link the skills. Hence, students might *read* and take notes, *listen* and *write* a summary, or *respond orally*.
3. **Language use draws on integrated skills**
   Language is used for specific purposes. The purpose may be academic, vocational, social, or recreational but it gives direction, shape, and ultimately meaning to discourse and texts
4. **Students learn best when instruction addresses students' needs**
5. **Teaching builds on the previous experience of the learners**

Student goals of an immersion program include

(1) Developing a high level of proficiency in the FL

(2) Developing positive attitudes toward foreign language speakers and their culture(s)

(3) Developing English language skills commensurate with expectations for a student's age and abilities

(4) Gaining designated skills and knowledge in the content areas of the curriculum

Immigrant On-Arrival Programs - focus on the newly arrived immigrants in a country and their need for survival. Such learners typically need to learn how to deal with differing kinds of real-world content as a basis for social survival.

Students with Limited English Proficiency (SLEP) programs – these are governmentally mandated programs to serve especially those children whose parents might be served by the on-arrival programs, but more generally designed to provide in-class instruction to those whose language competence is insufficient to participate fully in normal school instruction.

Language for Specific Purposes (LSP) - a movement that seeks to serve the language needs of learners who need language in order to carry out specific roles (e.g., student, engineer, technician, and nurse) rather than master the language for its own sake.

LSP/EST subfields

- ESP (English for Specific Purposes)
- EOP (English for Occupational Purposes)
- EAP (English for Academic Purposes)

Types of Learning and Teaching Activities: CBI

- Building Language skills
- Building Vocabulary
- Discourse organization
- Communicative interaction
- Synthesis of content materials and grammar

Skills for any CBI instructor

- Varying the format of classroom instruction
- Using group work techniques
- Using process approaches to writing
- Using appropriate error correction techniques
- Maintaining high levels of student esteem

Lecture: 22

Assumptions of Task-based instruction

- The focus is on process rather than product.
- Learners learn language by interacting communicatively and purposefully
- Basic elements are purposeful activities and tasks
- Activities and tasks of a task-based syllabus are sequenced according to difficulty
- Activities and tasks can be either: those that learners might need to achieve in real life; those that have a pedagogical purpose specific to the classroom

Difficulty of a task depends on a range of factors

- Previous experience
- Complexity of the task
- Language required
- The degree of support available

Task-based training identified several key areas of concern

- Analysis of real-world task-use situations
- The translation of these into teaching tasks descriptions
- The detailed design of instructional tasks
- The sequencing of instructional tasks in classroom training

Four major categories of team performance function

1. Orientation functions (processes for generating and distributing information necessary to task accomplishment to team members)
2. Organizational functions (processes necessary for members to coordinate actions necessary for task performance)
3. Adaptation functions (processes occurring as team members adapt their performance to each other to complete the task).
4. Motivational functions (defining team objectives and "energizing the group" to complete the task)

Academic tasks are defined as having four important dimensions

- The products students are asked to produce
- The operations they are required to use in order to produce these products
- The cognitive operations required
- The accountability system involved

Task types in TBLT

1. Diagrams and formations
2. Drawing
3. Clock faces
4. Monthly calendar
5. Maps -

Sequencing of tasks in TBLT

Honeyfield offers the following considerations:

- Motivation
- Input text
- Time allowed
- Output required
- Language items
- Skills, both macro-skills and sub skills
- World knowledge
- Role of teachers and learners
- Learning styles

A language learning task can be regarded as a springboard for learning work. In a broad sense, it is a structured plan for the provision of opportunities for the refinement of knowledge and capabilities entailed in a new language and its use during communication.

Six task types built on more or less traditional knowledge hierarchies

1. Listing
2. Ordering and sorting
3. Comparing
4. Problem solving
5. Sharing personal experiences
6. Creative tasks

Classification of tasks according to the type of interaction

1) **Jigsaw tasks**: These involve learners combining different pieces of information to form a whole
2) **Information-gap tasks**: One student or group of students has one set of information and another student or group has a complementary set of information. They must negotiate and find out what the other party's information is in order to complete an activity.
3) **Problem-solving tasks**: Students are given a problem and a set of information. They must arrive at a solution to the problem. There is generally a single resolution of the outcome
4) **Decision-making tasks**: Students are given a problem for which there are a number of possible outcomes and they must choose one through negotiation and discussion
5) **Opinion exchange tasks**: Learners engage in discussion and exchange of ideas

Characteristics of tasks

1. **One-way or two-way**: whether the task involves a one-way exchange of information or a two- way exchange
2. **Convergent or divergent**: whether the students achieve a common goal or several different goals
3. **Collaborative or competitive**: whether the students collaborate to carry out a task or compete with each other on a task
4. **Single or multiple outcomes**: whether there is a single outcome or many different outcomes are possible
5. **Concrete or abstract language**: whether the task involves the use of concrete language or abstract language
6. **Simple or complex processing**: whether the task requires relatively simple or complex cognitive processing

Target tasks the students needed to be able to carry out in English

- Basic social survival transactions
- Face-to-face informal conversations
- Telephone conversations
- Interviews on the campus
- Service encounters

Lecture: 23

Approach - The level at which *assumptions and beliefs* about language and language learning are specified. Approaches contain:

- Individual interpretation
- Application in different contexts
- Linked to very specific claims
- Linked to prescribe practices
- Can be revised and updated over time

***Approaches* for language teaching emerged over years**

- Communicative Language Teaching
- Competency-Based Language Teaching
- Content-Based Instruction
- Cooperative Learning
- Multiple Intelligences
- The Natural Approach
- Neurolinguistic Programming
- Task-Based Language Teaching
- Whole Language Approach

Designer or brand-name methods - packaged solutions that can be described and marketed for use anywhere in the world.

Method - The level at which theory is put into *practice*, and the *decisions about skills* and *content to be taught and the order* in which these will be taught are made. Methods contain:

- Fixed in time
- Learned through training
- Detailed specifications of content
- Roles of teachers and learners
- Teaching procedures and techniques

***Methods* for language teaching emerged over years**

- Audio-lingualism
- Counseling-Learning Method
- The Silent Way
- Suggestopedia
- Total Physical Response

Considerations before adopting any approach or method

- What advantages does the new approach or method offer?
- How compatible is it with teachers' existing beliefs and attitudes?
- How clear and practical is the new approach or method?
- Has it been tested out in some schools and classrooms?

Eclectic approach - a method of language education that combines various approaches and methodologies to teach language depending on the aims of the lesson and the abilities of the learners.

Role of Contextual Factors

In trying to apply approaches or methods, teachers sometimes ignore what is the starting point in language program design, namely, a careful consideration of the ***context*** in which teaching and learning occurs. Context includes:

- Cultural context
- Political context
- Local institutional context
- Context constituted by the teachers and learners in their classrooms

Post Method approach may not lead to rejection of the approach or method the teacher started out using but will lead to a modification of it as the teacher adds, modifies, and adjusts the approach or method to the realities of the classroom.

Teachers and teachers need to be able to use approaches and methods *creatively* based on their own judgment and experience.

In developing a *personal* approach to teaching, a primary reference point for the teacher is his or her personal beliefs and principles with regard to the following:

- His or her role in the classroom
- The nature of effective teaching and learning
- The structure of an effective lesson
- The difficulties learners face and how these can be addressed

Principles for teaching

- Engage all learners in the lesson
- Make learners, and not the teacher, the focus of the lesson
- Be tolerant of learners' mistakes
- Develop learners' confidence
- Teach learning strategies
- Practice both accuracy and fluency.

Factors that have influenced language teaching trends

- Government policy directives
- Gurus’ innovations
- Trends in the profession
- Responses to technology

- Influences from academic disciplines
- Learner-based innovations

Lecture: 24

General Language Processing Model

Lexeme & Lemma

The separation of a lemma and a lexeme can be understood by the observations made about speech errors. Most word-finding problems can now be interpreted as the difficulty of finding the *lexeme* belonging to a particular *lemma*.

Tip-of-the-tongue

In this phenomena speakers commonly do know the number of syllables and the stress pattern of a word, but fail to fill in that skeleton with segmental information. This is exactly what the ***model*** predicts.

Can Languages be switched On and Off?

An influential proposal was that of *Green*, who proposed three states in which languages can be at a certain moment in time:

1. Selected - The language that is used at a certain moment is the selected language
2. Active - Languages that, at that particular moment, play a role in the background are labeled active languages
3. Dormant – Languages that do not play a role at that moment is dormant.

Lexical decision task (LDT) - In LDTs, the participants are shown strings of letters on a computer screen and are asked to say whether that string is an existing word in a specified language. The subject's response time is measured.

In a priming condition, the words on the screen are preceded by another word, the prime. By varying the prime and the context of the experiment, reaction time differences can be measured between a cross-linguistic priming condition and a control condition.

Dynamic Model of the Multilingual Mental Lexicon and its Implications for SLA

The key words are 'association' and 'activation'. The words that are heard, seen or used most often are the words that are most easily accessed again and will have the most associations with other information such as how it is used. Words that are heard, seen or used the least will be the more difficult to retrieve.

Metalinguistic awareness - the ability to think about and manipulate language. It allows thinking about language as an object of inquiry rather simply speaking and understanding of language.

Pakistani Bilingual Context

When we came to Pakistani bilingual context we need to consider various aspects:

- Cultural Diversity and Linguistic Diversity
- Colonial Heritage
- National Language
- Official Language
- Provincial or Regional Languages
- Issues of Linguistic Identity and Power

Lecture: 25

EVP - its goal is to assist students to perform well in a workplace or a vocational higher education settings where English serves as a medium of communication.

The role of English as a medium of vocational communication helps students to understand their:

- Vocational content
- Perform specialist tasks
- Develop their vocational knowledge
- Develop their disciplinary language

Vocationally oriented language learning (VOLL) - aims to provide students with an English course integrated with vocational content. This vocational content is a starting point for designing English language programs based on vocational themes, tasks, and language.

Three main VOLL tasks

1. Vocational Vocabulary Building - general and technical vocabularies
2. Vocational Knowledge Building - through extensive listening and extensive reading
3. Functional Metalanguage Analysis

Purposes of Needs analysis

- To collect information about a particular problem which learners are experiencing
- To identify a gap between what students are able to do and what they need to be able to do
- To find out what language skills a learner needs in order to perform a particular role
- To help determine if an existing course adequately addresses the needs
- To identify a change of direction

ESP - many students study English for a particular purpose. People who are going to work as nurses in Britain or the USA, for example, will study medical English.

Needs analysis in ESP - As part of ESP instructional design, needs analysis serves as the basis for informed curriculum practices, such as syllabus design, materials development etc.

Elements of ESP Materials

1. Authenticity
2. Topics
3. Texts and contexts
4. Knowledge and language
5. Activities
6. Representations of participants
7. Pedagogical prompts - instructive information that guides or enables students to perform learning tasks

Branches of English for tourism

- Travel English
- English for Tour Guides
- English for Hotel Receptionists
- English for Hotel and Restaurant Workers
- English for Hotel Management

Lecture: 26

Two ways of deciding vocabulary learning goals

1. Identify native speaker's vocabulary size. It is estimated that a well-educated native speaker of English knows about 20,000 word families whereas Non-native speaker of English knows around 8000–9000 word families.
2. Identify how much vocabulary is needed in order to perform a particular activity in the target language

Challenges with L2 vocabulary learning and teaching

1. Unlike L1 vocabulary learning, L2 vocabulary learning rates are slow and uneven
2. The sheer task may appear daunting and there is too much to learn

Vocabulary-Learning Program: Key Features

- Establishing Goals and Needs
- Taking into Account Environmental Factors
- Following Vocabulary-teaching Principles
- Evaluation of the Vocabulary Component of a Language Course

Vocabulary Learning Activities: Learning Outside the Classroom

Opportunities for indirect vocabulary learning should occupy more time in a language course than direct vocabulary learning activities.

Extensive Reading

Extensive reading has been argued to be particularly effective in vocabulary learning. It not only offer opportunities for repeated exposure to the same lexical item, but also provides learners with opportunities to use words according to context, helping them notice, read, analyze, and eventually learn new items.

RANGE - This program allows teachers to tactically choose texts for different courses according to the vocabulary level of their learners.

Principles for an extensive reading approach

1. The reading material is easy
2. Reading material on a wide range of topics must be available
3. Learners choose what they want to read;
4. Learners read as much as possible
5. Reading is its own reward
6. Reading is individual and silent

Extensive Viewing

Extensive viewing of L2 television is another activity that can complement extensive reading. EFL learners are particularly encouraged to watch English television programs outside the classroom. *Webb* recommended extensive viewing of English language television programs as an approach to increase vocabulary growth.

Learners may need help and guidance on how to use watching television a valuable learning experience. Few strategies are:

- Repeated viewing
- Program selection
- Narrow viewing
- Subtitles

Lecture: 27

Teaching Pronunciation and the Case of Pakistan

We need to consider the following:

- Education system of Pakistan
- L2 and ELT in Pakistan
- Examination system in Pakistan
- Language skills and Classroom practices

English as Lingua Franca (ELF) and Pronunciation teaching and learning

In an ELF context, the teaching and learning of pronunciation awareness means being sensitive to the differences among the language varieties. Learners should be made aware of the major differences among the regional varieties such as the vowel alternation between the RP /ɑː/ and GA /æ/ in words like dance, ask, master, etc.

Internet resources for Pronunciation

- Authentic English speech such as newscasts (e.g., BBC & CNN), movies
- Online dictionaries with audio pronunciation demonstration
- Web-based pronunciation practice exercises
- Downloadable speech analysis programs (e.g., PRAAT, SFS)
- Online video communication facilities (e.g., Skype)

Lecture: 28

Pronunciation Skills

The articulatory and phonological skills enable speakers to produce sounds at the segmental and supra-segmental levels.

- At the segmental level, learners need to articulate discrete sounds such as vowels, consonants and diphthongs
- At Supra-segmental level, overall sound patterns of utterances are concerned

Speech Function Skills

There are basic language functions that learners need to show, for example,

- Inform
- Explain
- Request
- Accept
- Decline

Interaction Management Skills

It includes:

- Initiating interaction
- Taking turns
- Giving turns
- Asking for clarification

Discourse Organization Skills

Language learners may have longer turns and are required to produce extended pieces of discourse, for example, when giving a presentation, explaining procedures and narrating an event or a story. They will need skills to construct these spoken texts in ways that are consistent with the sociocultural conventions.

Communication Strategies - techniques that learners need to employ during oral communication to keep the conversation going.

Approximation - using generic terms or vague words such as '*thing'* to substitute a more precise term which they do not know in the target language.

Processes in Speech Production

- Conceptualization
- Formulation
- Articulation

Conceptualization - a speaker's mental planning process to determine what he or she intends to say. Information is selected and intentions of speech acts are activated at this stage.

Metacognitive processes manage and regulate speech as it is processed cognitively and articulated physically. A primary metacognitive process is monitoring.

Three types of speaking tasks

1. Communication-gap tasks - include missing information or details which one learner will have to describe to his partner.
2. Discussion tasks - learners share their personal views with one another
3. Monologic tasks - require learners to present ideas and views individually to a single listener or a group of listeners.

Strategies to enhance L2 learners' speaking performance

1. **Pre-task Planning** - to give learners time to plan and prepare for a speaking task
2. **Task Repetition** - is the repeated use of the same communication task by learners with the same or different people
3. **Metacognition Enhancement -** It encompasses:
   - Person knowledge - knowledge of one's own learning
   - Task knowledge - the nature and demands of learning tasks
   - Strategy knowledge - how to approach these tasks

Teaching Speaking Cycle (TSC)

In the TSC, learners develop their speaking through a number of activities and tasks as the teacher guides them systematically through each stage of the cycle. The seven stages in the TSC:

1. Focusing learners' attention on speaking
2. Providing input
3. Conducting speaking tasks
4. Focusing on language
5. Repeating speaking tasks
6. Directing learners' reflection on learning
7. Facilitating feedback on learning

Lecture: 29

Features of spoken language

- Spoken language is made up of different sounds
- Spoken language varies from person to person
- Spoken language, particularly spontaneous speech
- Spoken language is syntactically simpler than written language
- Spoken language contains more colloquial expressions than written language

<u>External Factors - difficulty of listening comprehension</u>

1) The Opportunities of Input:

Understanding our first language requires considerable cognitive development and constant exposure to different contexts over a period of several years; learning to listen in a foreign language is even more difficult because there are more challenges to confront. In a foreign language setting, communication is usually dominated by learners' first language.

2) **The speaker factors:**
   - Speech rates - Fast speech rates usually result in a significant reduction in comprehension
   - Pronunciation or accent - familiarity with a speaker's accent is the most important factor in comprehension

3) **Medium Factors:**
   - ***Text type***

     1) It is easier to understand any text that involves fewer rather than more individuals & objects

     2) It is easier to understand any text involving individuals or objects which are clearly distinct from one another

     3) It is easier to understand texts involving simple spatial relationships

     4) It is easier to understand a text if the information in the text is clear
   - ***Task type*** - tasks requiring an immediate response, such as matching pictures or multiple- choice, tend to be easier than tasks requiring evaluation or analysis.
   - ***Listening Context*** - Listening context is embedded in the task type and involves three factors:
     - Ways of minimizing the information processing load
     - The provision of visual support
     - Group work

Internal Factors - difficulty of listening comprehension

1) Language Proficiency

2) Background Knowledge

Format of a Well-Designed Listening Lesson

Three stages:

1) The Pre-listening Phase

a) Establish the purposes for listening activities

b) Activate necessary background knowledge

c) Provide linguistic support - can be done in many ways:
   - Ask students to preview a list of words
   - Pointing out the pronunciation of some words that may not be familiar to students
   - Pointing out the grammatical structures that may not be familiar to students
   - Pre-teaching phrases or collocations that may not be familiar to students

2) The While-listening Phase

a) Do simple easy tasks that require little writing or reading

b) Do graded tasks - Most listening texts used in the L2 classroom are pre-recorded audio recordings and can be played repeatedly. Each time teachers can ask students to focus on different aspects of the information.
   - 1st listening: Ask students to listen for the gist of the input
   - 2nd listening: Ask students to listen for more details
   - 3rd listening: Students normally are not interested in listening more than twice. If students are willing to listen third time, then ask them to focus on areas that are unclear to them

3) The Post-listening Phase

This phase can serve some useful purposes:

a) To confirm comprehension
b) To clarify uncertain points
c) To reflect on listening problems

Approaches to Listening Practice

1) Narrow Listening - means that learners focus on one topic of their own choice
2) Repeated Listening - learners can choose passages from their course books and listen to them repeatedly
3) Simultaneous Reading and Listening - reading while listening

Lecture: 30

Reading - usually understood as a process of deriving meaning from the printed words, sentences, paragraphs, or a whole text.

Viewing - involves the use of the computer or its equivalent such as smart phone or other digital tools for acquiring and processing information

Three variables affect reading and viewing

- Text (including multimodal texts, images, visuals and sounds) characteristics;
- Reader/viewer characteristics; and
- Social context

Teaching Reading and Viewing in the Classroom

Teachers usually distribute the chart to each student, clearly indicating the three columns with the three letters, K, W, and L. Once students get the text to be read, the teacher's teaching activity proceeds in the given sequence:

- K (what I already know)
- W (what I want to know)
- L (what is learned)

K-W-L chart

It is useful for teaching:

- Narrative texts
- Student expository texts
- Content-area knowledge

Factors Affecting Reading and Viewing Success in a Language Classroom

1. Text characteristics
2. Reader/viewer characteristics
3. Social context

Reading

- Recognizing language
- Reader reconstructs meaning of a text
- It is conscious and unconscious thinking process
- It is done by comparing text with prior knowledge

Three psycholinguistic process models

1) Bottom- up
2) Top-down
3) Interactive

Data Driven Models

Bottom-up model of reading

It holds that the reader takes in data from the page in sequence, and that reading involves a letter-by letter, and word-by-word analysis.

The crucial feature of this model, is that the processing moves in one direction, from "bottom" (the perception of letters on the page), to the "top" (cognitive processes to do with the construction of meaning).

Concept-Driven Models

Top-down models

It hold that text is sampled and that predictions which are meaningful to the reader are made on the basis of their prior knowledge.

Interactive Models

It proposes that input passes to a visual information store, where "critical features" are extracted. The information extracted is then operated upon by what the reader knows about language, syntactic, semantic, lexical knowledge. A reader's lack of ability at one level may be compensated for by proficiency at another.

Reading strategies - readers' deliberate and effortful mental or physical problem- solving moves in approaching a text for comprehension.

Critical reading and viewing – it takes place when students are engaged intensively with the text, including the visuals, sounds, images, among others. Students,

- Read between the lines
- View for implied meanings
- Analyze underlying meanings of visual images
- Evaluate reading material

Two purposive levels of reading and/or viewing lesson

1) **Meaning-focused reading and viewing lesson**

The teacher wants to design the lesson in such a way that there is a progression from micro-level comprehension to macro-level comprehension or an opposite approach can be taken.

2) **Acquisition-focused reading or viewing lesson**

The teacher might want to place an emphasis on an intensive study of a text. Teaching activities can include:

- Paraphrasing
- Word recognition practice
- Syntactic parsing practice
- Translation practice

Lecture: 31

Information Focused Approach

It is often used by novice writers, who note down all the facts and information about a topic, without establishing a focused *macro rhetorical goal* before starting to write.

Knowledge Transformation Approach

It is often used by experienced writers, who are more conferenced with the macro rhetorical goal and rhetorical situation (i.e., purpose, audience, and context).

The information-focused approach vs. the knowledge transformation approach differentiates the novice and experienced writers throughout the different stages of the composition:

Stages	Information Focused Approach	Knowledge Transformation Approach
Planning	Novice writers think about the topic and available knowledge about that topic.	Concerned with the rhetorical situation
Organizing	They present information in a chronological order.	Consider how organization of the material helps them fulfill their rhetorical goal
Writing	They've to decide what to say next in the sentence.	What to say next, refer to the macro rhetorical goal.

Elements of Model of Argumentation by *Toulmin*

1. Claim – a statement that the arguer wants to show is true
2. Data – the evidence offered in support of the claim
3. Warrant – an assumption that underlies the claim
4. Backing – evidence for the warrant
5. Qualifier – something which is added that in some way limits the applicability of scope of the claim
6. Reservation – a statement or a situation which, if true, renders the claim invalid

Sub-processes in writing

1. Conceptualizing stage - writers generate and select ideas
2. Formulating - putting ideas into sentences
3. Revising - rewrite and improve the essays
4. Reading - read the essay's instruction and gather information for the essay topic

Three distinct stages of writing according to 'Teaching &learning cycle'

1. Modeling
2. Joint construction of text
3. Independent construction of text

Understanding Features That Make a Text Coherent

1. Macro-structure - is about the outline of a text
2. Information structure - is about presenting old (given) information before introducing new information
3. Proposition development -
4. Cohesive devices - establish relationships between different sentences
5. Meta-discourse markers - used to help readers organize, interpret, and evaluate information

Adopting Good Editing Strategies

- It is advisable to read the composition aloud
- It is advisable to keep track of their error patterns
- Students should try to finish their writing earlier
- Students should consider using a word processor's editing tools to check for grammatical, spelling

Pedagogical Principles of the Socio-Cognitive Approach to Academic Writing

1. Teachers need to explain the purpose of writing to the students
2. Writing lessons would address the knowledge-transformation approach to writing
3. Second language writers' writing performance can be enhanced by understanding coherence in a broader sense
4. Writing is a complex activity

Traditional approaches to teaching L2 writing

- Process-approach
- Genre approach
- Controlled composition approach
- Rhetorical function approach

Lecture: 32

Micro-strategies for integrating language skills

- Try to understand the teacher's directions
- Brainstorm, in pairs or in small groups
- Engage in a decision-making process
- Carry out their plan of action
- Finish the activity with a whole class discussion

Exploratory projects aimed at providing a general plan for designing micro-strategies to integrate language skills

Project: Comic Situations

- Select any currently popular sitcom
- Watch the selected episode again
- Divide the episode into three or four segments
- Focus on and prepare questions about conversational features
- Focus also on characterization
- Try to implement your micro strategy in class

Project: Radio Days

- Select an evening news broadcast from a popular radio station
- Focus on each of the main news stories
- Focus on any prior knowledge of political or social events
- Focus on difficult lexical and grammatical structures
- Focus on a project in which the learners consult the library

Lecture: 33

Main Strands of a lesson plan

1. Goal (what the students are supposed to learn)
2. How the goal will be met (the method, procedure)
3. A way of measuring how well the goals were met (test)

Factors the academic year plan depends upon

- Demands of the school/educational authorities
- Traditions of the school
- Convenience of teacher
- Students' age and their level of knowledge

Functions and Significance of a Lesson Plan

- Enables a teacher to set objectives clearly
- Provides a statement of purpose for the whole lesson
- Provides a guide for the teacher
- Provides a map for organizing teacher's materials
- Provides a road map to the teacher to help students achieve their learning outcomes

Items to Include in a Lesson Plan

1. Title and sub titles of the lesson,
2. Time given for the lesson,
3. List of learning resources,
4. List of specific objectives
5. Methodology
6. Strategies applied
7. Recapitulation
8. Self-study exercises etc.

Items to Include in a Lesson Plan by *Herbartian*

1. Preparation
2. Presentation
3. Association
4. Generalization
5. Application

Lecture: 34

Abilities learners of English as lingua franca must develop

- Understand English when it is spoken or written by non-native speakers of English
- Understand in speech and writing to non-native speakers of English
- Interact effectively with non-native speakers of English

Important aspects of materials: Use of Spoken Interactions

- The Use of Authentic Texts - experience language as it is used in the real world
- The Use of Authentic Tasks - replicate in the classroom with real communicative demands
- The Use of Spoken Interactions between Non-native Speakers
- Pragmatic Awareness Activities - sensitivity towards different cultural norms - ways of greeting people, inviting people

Contexts of EIL communication which can be used to design spoken activities

- A foreign visitor seeking information/directions/assistance from a local resident in a non-English speaking country
- A foreign visitor seeking and giving information to a local official in a non- English speaking country
- A foreign visitor giving directions to a local taxi driver in a non-English speaking country
- A foreign visitor consulting a local doctor in a non-English speaking country

Lecture: 35

Use of Digital Media in Teaching EIL

Goals

- Mastery of language
- Mastery of new technologies
- The ability to combine language and technology to read and write the world

Three basic assumptions about the language classroom

1. Learners need guidance in learning English.
2. There are many styles of English used for different purposes.
3. Teachers should provide guidance by selecting appropriate language and by structuring learning activities.

Considerations for teachers when using Information Technology in the classroom.

Does the incorporation of IT;

- Allow the integration of digital media?
- Allow access to a wide range of information?
- Allow for a focus on both the products and processes of learning?
- Allow instructional material to be stored and recycled?
- Encourage discussion and consultation?

Best strategies for digital teachers

- Start by working with the tools they're familiar with
- Incorporate ICT incrementally
- Find ways to adapt or 'hack' digital tools
- Improvise and allow space for discoveries

Lecture: 36

Learner Autonomy

The term 'autonomy' is derived originally from the fields of politics and moral philosophy. The concept of learner's autonomy has first developed in the early 1970's in France.

In educational circles, autonomy is considered a worthy goal for *philosophical* as well as for *psychological* reasons.

From a philosophical point of view, one of the desirable goals of general education has been to make individuals autonomous who think independently and act responsibly.

The psychological foundation for learner autonomy can be traced into cognitive psychology, which suggests that learning is very effective if the learner integrates knowledge in his/her personal framework.

Terms used in the context of learner autonomy

Self-instruction refers to situations in which learners are working without the direct control of the teacher

Self-direction refers to situations in which learners accept responsibility for all the decisions concerned with learning

Self-access learning refers to situations in which learners make use of self-access teaching material

Individualized instruction refers to situations in which the learning process is adapted, either by the teacher or by the learner, to suit the specific characteristics of an individual learner

Advantages of Learner Autonomy

- Learners develop a capacity for critical thinking, decision making
- Learners develop self-control and self-discipline
- Learners discover their learning potential
- Learners take responsibility for learning
- Learners give up total dependence on the teacher

What Learner Autonomy is not?

- Autonomy is not independence, that is, learners have to learn to work cooperatively with their teachers & peers
- Autonomy is not context-free
- Autonomy is not a steady state achieved by learners

Taxonomies of learning strategies

Six Learning Strategies for Learner Autonomy by *Rebecca Oxford*

Direct strategies - those that directly involve the target language

1. Memory strategies for remembering and retrieving new information
2. Cognitive strategies for understanding and producing the language
3. Compensation strategies

Indirect strategies - those that support language learning without directly involving the target language

1. Metacognitive strategies for coordinating the learning process
2. Affective strategies for regulating emotions and attitudes
3. Social strategies for learning and working with others

Role of teachers in Learner training

- Negotiating with learners about course content and methodology
- Encouraging discussion in the classroom about language and language learning
- Encouraging learners to form their own views about language learning
- Encouraging learners become aware of the wide range of alternative strategies available to them
- Counseling and giving guidance to individual learners when possible

Components of Learner Training

- Informed
- Self-regulated
- Contextualized
- Interactive
- Diagnostic

Role of teachers in Learner training

- Identifying their learning strategies and styles to know their strengths and weaknesses
- Stretching their strategies and styles
- Evaluating their language performance
- Collaborating with other learners to pool information
- Taking advantage of opportunities to communicate

Degrees of Learner Autonomy

- At the initial stage of autonomy, the emphasis is simply on raising the learner's awareness of the reasons behind the teacher's choice of goals, tasks, and materials.
- At the intermediate stage, the emphasis is on allowing the learner to choose from a range of options given by the teacher.
- At the advanced stage, the emphasis is on learner determination of his/her goals, tasks, and materials.

Learner Autonomy and the Case of Pakistan

We need to consider the Pakistani context from following perspectives:

- Pakistani education system
- Teacher centered classes
- Large classes
- Lack of teacher training
- Socio-cultural factors

Lecture: 37

Components of Syllabus

- Topics
- Themes
- Situations
- Define types of assessments
- Design learning activities

Curriculum vs. Syllabus

A **curriculum** is concerned with making general statements about:

- Language learning
- Learning purpose and experience
- Relationship between teachers and learners

Curriculum refers broadly to all aspects of language policy, language planning, teaching methods, and evaluation measures.

A **syllabus** is more localized and is based on the accounts and records of what actually happens at the classroom level as teachers and students apply a curriculum to their situation.

Syllabus relates narrowly to the *specification* of content and the *sequencing* of what is to be taught.

Purpose of a Syllabus in Language Teaching

The syllabus ensures:

- Impartial understanding between the instructor and students
- Setting clear expectations of material
- Behavior in the classroom
- Effort on student's behalf
- Providing a marketing angle of the course

Characteristics of Syllabus and Language Teaching Classroom

- Basis for evaluating students' progress
- Basis for evaluating the appropriateness of the course
- Clarify the aims and objectives of learning and teaching
- Continuity and a sense of direction in classroom work
- Indicate the classroom procedures the teacher may wish to follow
- Record for other teachers of what has been covered in the course

Syllabus Classifications

Synthetic syllabus - a language system can be

a) Analyzed into its smaller units of grammatical structures, lexical items
b) Classified in some manageable and useful way
c) Presented to the learner one by one

Analytic syllabus - the language input is presented to the learner, not piece by piece, but in fairly large chunks. These chunks will not have any specific linguistic focus; instead, they will bring the learner's attention to the communicative features of the language.

Types of syllabus based on the *nature* and *purpose* of syllabus

1) Product- oriented - those in which the focus is on the knowledge and skills which learners should gain as a result of instruction.
2) Process-oriented syllabuses - those which focus on the learning experiences themselves

Taxonomies of syllabus types in language teaching

- Structural
- Situational
- Topical
- Functional
- Notional

Lecture: 38

Assessment - an ongoing interactive process, in which two parties (assessor and assessee) are involved. The assessor is someone who assesses the performance based on the defined standards, while assessee is someone who is being assessed. The process aims at determining the effectiveness of the overall performance of the assessee and the areas of improvement.

Traditional tests - like Board examinations are one-shot tests, based on textbooks that give inauthentic and de-contextualized testing tasks.

Performance based testing - continuous assessment, has contextualized test tasks and standardized scoring criteria. These are designed with a special care to present real life tasks which test learners' sociolinguistic ability.

Features of a good test

- Construct validity
- Reliability
- Authenticity
- Interactiveness

Types of Tests

- **Achievement test** is conducted at the end of the year
- **Proficiency test** is designed to measure people's ability in a language i.e. IELTS, TOEFL
- **Placement test** is used to place pupils at different levels of education
- **Diagnostic test** is employed to know the weaknesses and strengths of the learners in a language

Evaluation - The term is derived from the word 'value' which refers to 'usefulness of something'. Therefore, evaluation is an examination of something to measure its utility.

Difference in Assessment and Evaluation:

Basis for comparison	Assessment	Evaluation
Nature	Diagnostic	Judgmental
Criteria	Set by both the parties jointly.	Set by the evaluator.
Relationship between parties	Reflective	Prescriptive
Measurement Standards	Absolute	Comparative
Purpose	Formative	Summative
Orientation	Process Oriented	Product Oriented
What it does?	identify the level of performance of an individual	Determines the extent to which objectives are achieved.
Feedback	Based on observation and positive & negative points.	Based on the level of quality as per set standard.

Assessment Types

1 The selected-response type requires students to listen and/or read and then select the correct answer (by circling, making a mark).

Items in this category are suitable for testing the receptive skills of reading and listening and passive knowledge of subjects like grammar and vocabulary.

2 The constructed-response type - students are required to listen and/or read, they are also expected to produce either written or oral language (ranging from single words as in fill-in items to entire oral presentations).

Items in this category are suitable for the assessing of productive language use, active knowledge, as well as interactions of receptive (reading/listening) and productive (writing/speaking) skills.

3 Portfolio assessment requires students to collect work of their own choice that they have done throughout a course, as well as reflect on that work and display the portfolios for a particular audience.

4 Differentiated assessment requires teachers to first assess students' learning style preferences using an instrument like the Visual, Auditory, and Kinesthetic Learning Styles questionnaire and then provide different assessment procedures to suit the preferences.

5 Conference assessment usually involves teachers meeting with single student or small groups of students and going over various language points that need review or practice.

6 Self/peer - assessment type involves students scoring or rating their own work or their peers' work

Wash-back effect of examinations

Wash-back - an aspect of impact on processes of learning and instruction

A test could have either beneficial or harmful wash-back.

A test has **beneficial wash-back** if it is based on the language needs of the learners

A test has **harmful wash-back** if the content and techniques are at variance with the objectives of the course

Lecture: 39

Teacher training refers to the policies & procedures designed to equip teachers with the knowledge, attitudes, behaviors, and skills they require to perform their tasks effectively in the classroom, school, and wider community.

Observing partner - The primary role of the observer is to analyze and interpret teaching acts, and not to judge and evaluate the teacher. In other words, the observing partner should take on the role of a *counselor*, not that of a *supervisor*.

When to Train?

Stages of teacher education

1) **Initial teacher training / education** (a pre-service course before entering the classroom)
2) **Induction** (the process of providing training and support during the first few years of teaching)
3) **Teacher development** or continuing professional development (CPD) (an in-service process for practicing teachers)

Four areas of teacher education curricula

1) Foundational knowledge in education-related aspects of philosophy of education
2) Skills in assessing student learning
3) Content-area and methods knowledge
4) Practice at classroom teaching

Common European Principles

- A well-qualified profession
- A mobile profession
- A profession based on partnerships

Teacher Training and Language Teaching in Pakistan

Teachers for the primary schools are trained, and must have passed *Secondary School examination*. They are provided one year training. After completion of this training they are awarded a certificate called Primary Teacher's certificate (PTC).

Those who possess *FA/F.Sc* certificate are given one year training and awarded a certificate called Certificate in Education (CT).

Those who possess *BA/.Sc* degrees are provided one year training called "Bachelor of Education" (B.Ed) at the Government Colleges of Education.

Those who further want to specialize in the subject of education undergo one year course called Master in Education (M.Ed).

Lecture: 40

Benefit of research in language teaching

- Applicable (to your language classroom)
- Collaborative (integrating you into a teacher-researcher community practice)
- Empowering (for you and the participants in your research

To understand research in language teaching in the Pakistani context we need to consider

- The ELT context of Pakistan
- General research context of Pakistan
- Research in SLA/ ELT and Pakistan
- Current Practices in Pakistan

……..
